Financing The Education Of Health Workers: Gaining A Competitive Edge Alexander S Preker,Hortenzia Beciu,Eric L Keuffel,2019-08-27 This volume reviews the economic underpinnings (investment and financing) and institutional reforms needed to successfully scale up the education of health workers. In this regard, the book examines five major economic and institutional challenges that policy makers face: (1) governance of health education organizations and systems; (2) approaches to financing the education of health workers; (3) the special nature of capital investment in expanding the capacity of health education institutions; (4) public-private partnerships in health education; and (5) equity in accessing health education, with a special focus on issues that arise from private approaches to the education of health workers. Much of the existing literature focuses on the quality and contents of training health workers, and very little has been written on the institutional dimension of financing their training and education. This book examines the complex institutional and financial models and approaches that can impact the demand and supply of health worker education programs around the world. Building on the findings of the Independent Commission on the Education of Health Professionals for the 21st Century, which published on the foundations and the issues of global postsecondary professional education, this volume brings in new and in-depth aspects such as governance, capital investments, and the role of the private sector in the production of health professionals; thus allowing the reader to understand how the health worker education field has moved from theory to practice.

Work Accommodation and Retention in Mental Health Izabela Z. Schultz,E. Sally Rogers,2010-11-16 Growing interest in the field of

mental health in the workplace among policy makers, clinicians, and researchers alike has been fueled by equal employment rights legislation and increasing disability statistics in mental health. The importance of addressing this topic is underscored by the fact that depression now ranks second on the hierarchy of occupational disabilities. The problem is compounded by a host of factors, including major difficulties in job retention and productivity experienced by persons with mental health disabilities; younger age and higher education of persons with mental health problems; and labor shortages and an aging workforce in many industrialized countries. In addition, particularly in the United States, the vocational needs of army veterans returning from duty with mental health disorders require system-based solutions and new rehabilitation approaches. The pressure created by these powerful legislative, societal, and economic forces has not been matched by the state of evidence-based practices in the field of employment retention and job accommodation in mental health. Current research evidence is fragmented, limited in scope, difficult to access, and adversely affected by the traditional divide between the fields of psychiatry and psychology on one hand and interdisciplinary employment research and practices on the other. As a result, policy makers, employers, disability compensation systems, and rehabilitation and disability management professionals have been left without a critical how to evidence-informed toolbox for occupational practices to accommodate and retain persons with mental health disabilities in the workplace. Currently, no single source of knowledge and research evidence exists in the field that would guide best practices. Yet the need for workplace accommodations for persons with mental health disabilities has been growing and, based on epidemiological trends, is anticipated to grow even more in the

future. These trends leave physicians, psychologists, occupational therapists, vocational rehabilitation professionals, disability managers, human resource professionals, and policy makers poorly prepared to face the challenge of integrating and maintaining persons with mental health disabilities in the workplace. The aim of the Handbook is to close the gap between the needs of the professionals and networks that work with or study persons with mental health disorders in an employment context and the actual knowledge base in the field. The Handbook will be written in language that can easily be understood by readers representing a multitude of disciplines and research paradigms spanning the mental health, rehabilitation, and employment fields of inquiry. The Handbook will contribute an integration of the best quantitative and qualitative research in the field, together with experts' consensus, regarding effective work retention and accommodation strategies and practices in mental health. The book will consist of five major sections, divided into chapters written by recognized experts in these areas.

Psychology of Decision Making in Legal, Health Care and Science Settings Gloria R. Burthold, 2007 In a fast-moving world, the necessity of making decisions, and preferably good ones, has become even more difficult. One reason is the variety and number of choices perhaps available which often are not presented or understood. Alternatives are often unclear and complex paths to them confusing and misleading. Thus the process of decision making itself requires analysis on an ongoing basis. Decision making is often made based on cultural factors whereas the best alternative might be quite different. The subject touches ethical aspects as well as psychological considerations. This book presents important research on the psychology of decision making related to law and law enforcement,

health care and science.

The Patient's Guide to Preventing Medical Errors Karin J.

Berntsen, 2004-10-30 A nation watched in horror as 17-year-old Jessica Santillian died needlessly after a heart-lung transplant in 2003. She had been given organs with the wrong blood type. That error killed her. It is just one among tens of thousands of less publicized errors that occur in U.S. hospitals each year. Author Karin Berntsen, a veteran of the hospital and health care industry, takes us through the headlines, and the events never publicized, into hospital wards and surgical rooms to see how errors are made causing disability or death. She gives graphic examples of actual events that illustrate the problems cited in a federal Institute of Medicine report showing medical errors in the hospital cause 44,000 to 98,000 deaths each year. Those errors include medication mistakes, wrong site or side surgery, and botched transfusions. Berntsen explains why these are not just human errors with one or two people responsible; they are systems failures that require a major culture change to remedy. And that change, she argues, may not come without action by the very people the medical system is designed to help: patients. She offers clear actions consumers can take to assure they are not on the receiving end of a medical error. The book details over 200 tips for improving patient safety. U.S. hospitals have countless stories of miraculous healing and recovery; the greatest technology, most advanced medicines, and best research in the world. On the other hand, we have a system where medical errors bring more than 120 fatalities each day across the country in hospitals. An airline crash causing that many deaths daily would paralyze that industry. But because the deaths and harm are diluted across and deep within the silence of hospitals, it is easier to be complacent. There is, says Berntsen, an urgent need to pause and take

inventory, a need for clinicians and consumers to come together as partners for change.

Protecting Data Privacy in Health Services Research Institute of Medicine, Division of Health Care Services, Committee on the Role of Institutional Review Boards in Health Services Research Data Privacy Protection, 2001-01-13 The need for quality improvement and for cost saving are driving both individual choices and health system dynamics. The health services research that we need to support informed choices depends on access to data, but at the same time, individual privacy and patient-health care provider confidentiality must be protected.

Essays that Worked for Medical Schools Ballantine, 2007-12-18 Discover why admissions officers from the nation's top medical schools selected these essays of worthy applicants With only a limited number of spaces available every year to the thousands of qualified applicants to the nation's top medical schools, a serious candidate must find a way to set himself or herself apart from the crowd. The essay is your one chance to highlight the personal qualities and achievements that the application and MCAT scores do not reveal. As *Essays That Worked for Medical Schools* demonstrates, there is no such thing as the perfect submission. The winning essays cover a wide range of

interesting topics. If there is any similarity, it is that they are written from the heart. One applicant writes about his work as a counselor for mentally ill adults and teens. Another tells about the life-changing experience of delivering much needed supplies to a leprosy village in West Africa. And a third applicant talks about time spent volunteering at a local senior center. From the thousands submitted each year, the essays in this book were considered some of the best by admissions officers at the nation's top medical schools. With creativity and effort, you can turn almost any topic into an effective, successful essay for your medical school application!
