Honey Rajesh Kumar,Om Prakash Agrawal,Younis Ahmad Hajam,2021-12-21 Honey is a supersaturated solution of sugar made by bees. Honeybees collect a liquid secretion from flowers, called nectar, and take this back to their hives. It is an appreciated natural gift to humanity derived entirely from honeybees. Honey is the by-product of nectar collected by bees from the flowers, with some digestive enzymes produced by the honeybees themselves. Honey: A Miraculous Product of Nature summarizes the current status of honey, it's uses and related aspects. This illustrated volume describes use of honey in traditional medicines, i.e. Ayurveda, Siddha, and Unani by acting as a preservative and nourishing agent. Also, other properties like digestibility, palatability, deliciousness, refreshing, thirst quencher, stomachic, anti-obtrusive, expectorant, anti-oxidative, anti-tussive and blood purifier are explained in beautiful manner. The role of honey in improving eyesight, strengthens gums and teeth and it's use in jaundice, spleen enlargement, sore throat, chest diseases, sexual debility, renal and cystic calculi, intestinal worms, heart diseases and leprosy is very well described. The compiled knowledge from range of bee scientists, Honey: A Miraculous Product of Nature aims to provide broad knowledge on honey to the researchers, apiculturists and students to continue their work on honey and honeybees.

Environmental Regulatory Calculations Handbook Leo Stander,Louis Theodore,2007-06-04 Regulatory Calculations Handbook addresses the environmental concerns of individuals by presenting the basic fundamentals of many environmental regulatory topics. Featuring an overview of the history of environmental problems, the current regulatory framework, and problems/solutions of practical problems in the field, this handbook comprehensively brings the potential calculations and information on regulations into one single-source reference. Provides 500 solved problems, which detail how to calculate the amount of pollutant that a facility is letting go into the environment Includes problems and solutions that can stand alone, offering material that develops the reader's understanding of regulatory matters Combines information that is otherwise spread-out and difficult to consolidate quickly

Energy Indicators for Sustainable Development International Atomic Energy Agency,2005 This publication presents a set of energy indicators for sustainable development and is an analytical tool for countries to track their progress on energy for sustainable development. The thematic framework, guidelines, methodologies and energy indicators set out in this publication reflect the expertise of five international agencies and organizations

(International Atomic Energy Agency, United Nations Department of Economic and Social Affairs, International Energy Agency, Eurostat and European Environment Agency). General guidelines and specific methodology sheets for 30 energy indicators are outlined in this report for statisticians, analysts, policy makers and academics to use in their efforts to analyse the effects of energy policies on the social, economic and environmental dimensions of sustainable development.

Structural Transformation and Rural Change Revisited Bruno Losch, Sandrine Freguin-Gresh, Eric Thomas White, 2012-06-18 Based on new evidence from in-depth field surveys, this book addresses the unique situation of countries that remain deeply engaged in agriculture, and proposes a set of policy orientations which could facilitate the process of rural change.

Environmental Management Louis Theodore, R. Ryan Dupont, Terry E. Baxter, 2017-12-14 There is a growing need to support undergraduate educators in the development of environmental management educational materials. Recognizing this need, the National Science Foundation funded a College Faculty Workshop on Environmental Management, that was conducted at Utah State University in July and August 1996. The principle objectives of the seminar were (1) to provide a meaningful course which would generate new ideas and innovative educational approaches in the emerging field of environmental management, and (2) to develop an applications-oriented problem workbook which would support undergraduate faculty involvement in the production of course materials. The result of this effort is *Environmental Management: Problems and Solutions*, an informative text on the essentials of environmental management. More than 200 structured problems presented in the book are meant to elicit a sound understanding of the basics of environmental monitoring, assessment and control. Detailed solutions to each problem, provided with each chapter, will prove useful to both the student and the instructor. This innovative text is a valuable resource for anyone involved in training of engineers and scientists in the field of environmental engineering.

Life Cycle Assessment (LCA) of Environmental and Energy Systems Fabrizio Passarini, Luca Ciacchi, 2021-04-01 The transition towards renewable energy sources and “green” technologies for energy generation and storage is expected to mitigate the climate emergency in the coming years. However, in many cases, this progress has been hampered by our dependency on critical materials or other resources that are often processed at high environmental burdens. Yet, many studies have shown that environmental and energy issues are strictly interconnected and require a comprehensive understanding of resource management strategies and their implications. Life cycle assessment (LCA) is among the most inclusive analytical techniques to analyze sustainability benefits and trade-offs within complex systems and, in this Special Issue, it is applied to assess the mutual influences of environmental and energy dimensions. The selection of original articles, reviews, and case studies addressed covers some of the main driving applications for energy requirements and greenhouse gas emissions, including power generation, bioenergy, biorefinery, building, and transportation. An insightful perspective on the current topics and technologies, and emerging research needs, is provided. Alone or in combination with integrative methodologies, LCA can be of pivotal importance and constitute the scientific foundation on which a full system understanding can be reached.

Handbook of Chemical and Environmental Engineering Calculations Joseph Reynolds, John S. Jeris, Louis Theodore, 2007-02-09 Because of the ubiquitous nature of environmental problems, a variety of scientific disciplines are involved in the development of environmental solutions. The Handbook of Chemical and Environmental Engineering Calculations provides approximately 600 real-world, practical solutions to environmental problems that involve chemical engineering, enabling engineers and applied scientists to meet the professional challenges they face day-to-day. The scientific and mathematical crossover between chemical and environmental engineering is the key to solving a host of environmental problems. Many problems included in the Handbook are intended to demonstrate this crossover, as well as the integration of engineering with current regulations and environmental media such as air, soil, and water. Solutions to the problems are presented in a programmed instructional format. Each problem contains a title, problem statement, data, and solution, with the more difficult problems located near the end of each problem set. The Handbook offers material not only to individuals with limited technical background but also to those with extensive industrial experience. Chapter titles include: Chemical Engineering Fundamentals Chemical Engineering Principles Air Pollution Control Equipment Solid Waste Water Quality and Wastewater Treatment Pollution Prevention Health, Safety, and Accident Management Ideal for students at the graduate and undergraduate levels, the Handbook of Chemical and Environmental Engineering Calculations is also a comprehensive reference for all plant and environmental engineers, particularly those who work with air, drinking water, wastewater, hazardous materials, and solid waste.

Life Cycle Management Arne Remmen, United Nations Environment Programme, 2007 The journey towards sustainability requires that companies must find innovative ways to make profits and at the same time extend the traditional boundaries of business to include the environmental and social dimensions, a process known as Life Cycle Thinking. This Guide contains many examples illustrating how business organizations are putting Life Cycle Thinking into practice all over the world.

Healing Honey Lynne Chepulis, 2008 Too much sugar can be bad for our health. Not only can it make us overweight and sluggish, but it can also contribute to many diseases including diabetes, atherosclerosis, and vascular disease. But what can we do? Sugar is everywhere - and the simple truth is that food manufacturers are concerned more about profit than consumer health. As with most things, nature appears to have provided the solution: honey. The medicinal properties of honey have been recognized for literally hundreds of years, but until recently, they have been nothing more than folklore. However, this is beginning to change. Over the last 20-30 years, scientists have discovered that there is real truth to the belief that honey is good for your health. Honey has been revealed to have a high antioxidant content and contain a unique blend of sugars, vitamins, and other ingredients. We know now that consuming honey can offer not only sweetness, but the chance for a healthier life.

Global Warming Ibrahim Dincer, Adnan Midilli, Arif Hepbasli, T. Hikmet Karakoc, 2009-12-03 Global Warming: Engineering Solutions goes beyond the discussion of what global warming is, and offers complete concrete solutions

that can be used to help prevent global warming. Innovative engineering solutions are needed to reduce the effects of global warming. Discussed here are proposed engineering solutions for reducing global warming resulting from carbon dioxide pollution, poor energy and environment policies and emission pollution. Solutions discussed include but are not limited to: energy conversion technologies and their advantages, energy management and conservation, energy saving and energy security, renewable and sustainable energy technologies, emission reduction, sustainable development; pollution control and measures, policy development, global energy stability and sustainability.
