Welcome,fellowtravelertothestars!Forthenextyearwewilltakeajourneytogetheracrossthenight sky. In these pages you will find lunar features, planets, meteor showers, single and multiple stars, open and globular clusters, as well as distant galaxies. There will be astronomy history to explore, famous astronomers to meet, and science to learn. You'll find things here for those who enjoy stargazing with just their eyes, binoculars, or even the largest of telescopes! Although these observing tips are designed with all readers in mind, not everyone lives in the same time zone—or the same hemisphere—and certainly no one has clear skies every night. But no matter where you live, or who you are, it is my hope that somewhere here you find something of interest to keep you looking up! LearningtheNightSky If you are new to astronomy, it might seem difficult to learn all those stars. Relax! It's much easier than you think. Just like moving to a new city, everything will seem unfamiliar at first, but with a little help from some maps, you'll soon be finding your way around like a pro. Once you become familiar with the constellations and how they appear to move across the night sky, the rest is easy. If you do not have maps of your own, try visiting your local library or one of many online sites thatcangeneratethem. Sirius Jay B. Holberg,2007-07-05 This book tells two stories. The first and most obvious is why the star known as Sirius has been regarded as an important fixture of the night sky by many civilizations and cultures since the beginnings of history. A second, but related, narrative is the prominent part that Sirius has played in how we came to achieve our current scientific understanding of the nature and fate of the stars. This is the first book to integrate the cultural history of Sirius with modern astrophysics in a way which provides a realistic view of how science progresses over time.

Finding a Million-Star Hotel Bob Mizon,2016-07-04 Bob Mizon, one of the world's best known campaigners against the veil of light pollution that has taken away the starry sky from most of the world's population, takes readers to a hundred places in the UK and the USA where the wonders of the night sky might still be enjoyed in perfect or near-perfect night skies. Visiting small hotels and simple campsites, and savoring vast dark-sky reserves where the night sky is actively protected, The Million-Star Hotel celebrates the black skies of yesteryear - which may become a reality for more and more of us as modern technology reins in lighting and puts it only where needed. How can you prepare for your stay beneath the stars? What astronomy can you do during the daytime? What kind of equipment will you need? Questions such as these are answered, and if town dwellers return inspired - and, Bob hopes, also inspired to look with fresh eyes at their own local lighting - there is enough information here for them to equip themselves for some urban astronomy too.
