Genetic Enhancement of Crops for Tolerance to Abiotic Stress: Mechanisms and Approaches, Vol. I Vijay Rani Rajpal,Deepmala Sehgal,Avinash Kumar,S.N. Raina,2019-04-24 Abiotic stresses such as drought (water deficit), extreme temperatures (cold, frost and heat), salinity (sodicity) and mineral (metal and metalloid) toxicity limit productivity of crop plants worldwide and are big threats to global food security. With worsening climate change scenarios, these stresses will further increase in intensity and frequency. Improving tolerance to abiotic stresses, therefore, has become a major objective in crop breeding programs. A lot of research has been conducted on the regulatory mechanisms, signaling pathways governing these abiotic stresses, and cross talk among them in various model and non-model species. Also, various 'omics' platforms have been utilized to unravel the candidate genes underpinning various abiotic stresses, which have increased our understanding of the tolerance mechanisms at structural, physiological, transcriptional and molecular level. Further, a wealth of information has been generated on the role of chromatin assembly and its remodeling under stress and on the epigenetic dynamics via histones modifications. The book consolidates outlooks, perspectives and updates on the research conducted by scientists in the abovementioned areas. The information covered in this book will therefore interest workers in all areas of plant sciences. The results presented on multiple crops will be useful to scientists in building strategies to counter these stresses in plants. In addition, students who are beginners in the areas of abiotic stress tolerance will find this book handy to clear their concepts and to get an update on the research conducted in various crops at one place

India's Revolutionary Inheritance Chris Moffat,2019-01-10 Interrogates the explosive potential of revolutionary anti-colonial 'afterlives' in contemporary Indian politics and society.

Asianisms Marc Frey,Nicola Spakowski,2015-11-11 At the core of this book is a seemingly simple question: What is Asia? In search of common historical roots, traditions and visions of political-cultural integration, first Japanese, then Chinese, Korean and Indian intellectuals, politicians and writers understood Asianisms as an umbrella for all conceptions, imaginations and processes which emphasized commonalities or common interests among different Asian regions and nations. This book investigates the multifarious discursive and material constructions of Asia within the region and in the West. It reconstructs regional constellations, intersections and relations in their national, transnational and global contexts. Moving far beyond the more well-known Japanese Pan-Asianism of the first half of the twentieth century, the chapters investigate visions of Asia that have sought to provide common meanings and political projects in efforts to trace, and construct, Asia as a united and common space of interaction. By tracing the imagination of civil society actors throughout Asia, the volume leaves behind state-centered approaches to regional integration and uncovers the richness and depth of complex identities within a large and culturally heterogeneous space.

Maize Crop A. Solaimalai,P. Anantharaju,S. Irulandi,M. Theradimani,2020-05-10 Maize is one of the versatile emerging crops with wider adaptability under varied agro-climatic conditions. Globally, maize is known as queen of cereals because it has the highest genetic yield potential among the cereals. It is cultivated on nearly 150 m/ha in about 160 countries having wider diversity of soil, climate, biodiversity and management practices that contributes 36 % (782 m/t) in the global grain production. The United States of America (USA) is the largest producer of maize contributes nearly 35 % of the total production in the world. It is the driver of the US economy. This book talks about the improvement, production, protection and post harvest technology of the maize crop. Note: T& F does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

The 27 Celestial Portals Prash Trivedi,2005-03 It is common knowledge that the 12 star-signs map the sky and set the stage for the drama of life. This book expands this awareness manifold by revealing that it is the 27 constellations, and not the 12 signs, which truly map the ecliptic and provide the celestial backdrop for affairs on earth. Instead of taking away from the widely recognized meanings and significations of the 12 signs, they enrich them with a whole new depth of perspective and interpretation.

Rediscovery of Genetic and Genomic Resources for Future Food Security Romesh Kumar Salgotra,Sajad Majeed Zargar,2020-01-28 This book describes how the latest genomic resources techniques can be efficiently used in plant breeding programmes to achieve food security in the future. It also shares insights on how to utilize the untapped and unexplored genetic diversity of wild species, wild relatives and landraces for crop improvement. Moreover, the book offers an impressive array of balanced analyses, fresh ideas and perspectives, and thoughtful and realistic proposals regarding the sustainable utilization of plant genetic resources with modern biotechnological techniques. The first book to address the importance of plant genetics and genomic resources for food security, it brings together a group of plant breeders and biotechnologists to investigate the use of genomic resources techniques in plant breeding programmes. Providing essential information on the efficient utilization of genomic resources in precision breeding, it offers a valuable asset for undergraduate and graduate students, teachers and professionals engaged in related fields.

Sustainable Food Waste Management Monika Thakur,V. K. Modi,Renu Khedkar,Karuna Singh,2021-01-04 This book discusses one of the biggest challenges of the food industry, which is waste management. Food industries generate high amounts of waste, both solid and liquid, resulting from the production, processing and consumption of food. Stringent environmental legislators have made the task of waste management more challenging. Through the three sections of this book, the readers are

introduced to the different types of wastes generated, utilization of waste through food processing industry and sustainable waste management technologies. The different chapters describe how the biomass and the valuable nutrients from food industry wastes could be used to develop value-added products. The book reiterates that food wastes and their by-products are an excellent source of sugars, minerals, dietary fiber, organic acids, bio active compounds such as polyphenols, carotenoids and phytochemicals etc. This book is an excellent resource for industry experts, researchers and students in the field of food science, food processing and food waste management.

Honey Rajesh Kumar,Om Prakash Agrawal,Younis Ahmad Hajam,2021-12-21 Honey is a supersaturated solution of sugar made by bees. Honeybees collect a liquid secretion from flowers, called nectar, and take this back to their hives. It is an appreciated natural gift to humanity derived entirely from honeybees. Honey is the by-product of nectar collected by bees from the flowers, with some digestive enzymes produced by the honeybees themselves. Honey: A Miraculous Product of Nature summarizes the current status of honey, it's uses and related aspects. This illustrated volume describes use of honey in traditional medicines, i.e. Ayurveda, Siddha, and Unani by acting as a preservative and nourishing agent. Also, other properties like digestibility, palatability, deliciousness, refreshing, thirst quencher, stomachic, anti-obtrusive, expectorant, anti-oxidative, anti-tussive and blood purifier are explained in beautiful manner. The role of honey in improving eyesight, strengthens gums and teeth and it's use in jaundice, spleen enlargement, sore throat, chest diseases, sexual debility, renal and cystic calculi, intestinal worms, heart diseases and leprosy is very well described. The compiled knowledge from range of bee scientists, Honey: A Miraculous Product of Nature aims to provide broad knowledge on honey to the researchers, apiculturists and students to continue their work on honey and honeybees.

When I Am 21 Louis Mazzullo,2014-08-21 When I Am 21 is an attempt to capture the spirit of the students with whom I worked in residential placement. The student papers are filled with hope and despair, sadness and happiness, poignancy, honesty, and deep longing. My hope is that this book will contribute to efforts towards working with these students to provide them with what they need, a top-quality education that offers academic pursuits, and especially for the majority of students, vocational training and interpersonal skills as essential parts of the curriculum. It is impossible to look at these student wishes and not be impressed by the desire to work. Work is the basis of community. It involves the giving and taking essential to human transactions, the fulfillment of wants and needs, the reciprocity of rights and responsibilities, and the culmination - hopefully - of an educational process that allows students to identify their interests and skills and to choose a job suitably commensurate with such. (page 49). I find most noteworthy those wishes that refer to personal virtues ('be brave', 'will listen', 'to still pray') and those that refer to a world outside of and bigger than ourselves ('a world without violence', 'peace on earth', 'help younger children to read', 'everyone will stop killing animals', 'will help the needy'). (page 146) Peer relations are generally the greatest single indicator both of social/emotional health and happiness/sadness for individuals throughout society. Peer relations is the arena wherein questions of autonomy, maturity, morality, virtue and interpersonal satisfaction come together. Love interests encompass the spiritual, the emotional and the physical. (page 197)

Six prizes were awarded, however there were many more entries. This book collates many of those entries and contains inspiring, thought-provoking and original viewpoints of open science through the eyes of those conducting research on a daily basis.

Optimization and Applicability of Bioprocesses Hemant J. Purohit,Vipin Chandra Kalia,Atul N. Vaidya,Anshuman A. Khardenavis,2018-12-12 This book argues that the sustainable management of resources requires a systematic approach that primarily involves the integration of green innovative biotechnological strategies and eco-engineering. It discusses how microbial community intelligence can be used for waste management and bio-remediation and explains how biological processes can be optimized by integrating genomics tools to provide perspectives on sustainable development. The book describes the application of modern molecular techniques such as fluorescence in situ hybridization (FISH), highly sensitive catalyzed reporter deposition (CARD)-FISH, in situ DNA-hybridization chain reaction (HCR) and methods for detecting mRNA and/or functional genes to optimize bioprocessess. These techniques, supplemented with metagenomic analysis, reveal that a large proportion of micro-organisms still remain to be identified and also that they play a vital role in establishing bioprocesses.
