Nuking the Moon Vince Houghton,2020-05-05 The International Spy Museum's Historian takes us on a wild tour of missions and schemes that almost happened, but were ultimately deemed too dangerous, expensive, ahead of their time, or even certifiably insane. Compulsively readable laugh out loud history. –Mary Roach, New York Times bestselling author of *Grunt and Stiff* In 1958, the U.S. Air Force nuked the moon as a show of military force. In 1967, the CIA sent live cats to spy on the Soviet government. In 1942, the British built a torpedo-proof aircraft carrier out of an iceberg. Of course, none of these things ever actually happened. But in *Nuking the Moon*, intelligence historian Vince Houghton proves that abandoned plans can be just as illuminating--and every bit as entertaining--as the ones that made it. Vividly capturing the fascinating stories of how twenty-one plans from WWII and the Cold War went from conception, planning, and testing to cancellation, Houghton explores what happens when innovation meets desperation: For every plan as good as D-Day, there's a scheme to strap bombs to bats or dig a spy tunnel underneath the Soviet embassy. Along the way, he reveals what each one tells us about twentieth-century history, the art of spycraft, military strategy, and famous figures like JFK, Castro, and Churchill. By turns terrifying and hilarious--but always riveting--this is the unique story of history left on the drawing board.

Materials for Nuclear Plants Wolfgang Hoffelner,2012-09-21 The clamor for non-carbon dioxide emitting energy production has directly impacted on the development of nuclear energy. As new nuclear plants are built, plans and designs are continually being developed to manage the range of challenging requirement and problems that nuclear plants face especially when managing the greatly increased operating temperatures, irradiation doses and extended design life spans. *Materials for Nuclear Plants: From Safe Design to Residual Life Assessments* provides a comprehensive treatment of the structural materials for nuclear power plants with emphasis on advanced design concepts. *Materials for Nuclear Plants: From Safe Design to Residual Life Assessments* approaches structural materials with a systemic approach. Important components and materials currently in use as well as those which can be considered in future designs are detailed, whilst the damage mechanisms responsible for plant ageing are discussed and explained. Methodologies for materials characterization, materials modeling and advanced materials testing will be described including design code considerations and non-destructive evaluation concepts. Including models for simple system dynamic problems and knowledge of current nuclear power plants in operation, *Materials for Nuclear Plants: From Safe Design to Residual Life Assessments* is ideal for students studying postgraduate courses in Nuclear Engineering. Designers on courses for code development, such as ASME or ISO and nuclear authorities will also find this a useful reference.

The Plot to Save the Planet Brian Dumaine,2008-06-24 American entrepreneurs, corporate tycoons, and financiers are plotting what they do best--creating new industries that change the world and making billions in the process--a plot that will ultimately save the planet. *The Plot to Save the Planet* is an illuminating and inspiring look at the "conspiracy" to make green technology the Silicon Valley of the twenty-first century--the creator of massive numbers of jobs and huge amounts of wealth. Suddenly, the ugly mudslinging between environmentalists and big business has abated, and these two previously opposed forces are now strange bedfellows in a race to head off climate change. How is this new frontier being shaped? Brian Dumaine is your guide in this intriguing look into the very near future filled with colorful and informative stories about the entrepreneurs, investors, and corporate mavericks who are managing to pull off the feat of combining economic growth and environmental protection to battle global warming. You'll read about: • The savvy investors: Why Warren Buffett is investing heavily in wind power; and why John Doerr, the venture capitalist and early backer of Google, is saying that "green tech is bigger than the Internet and could be the biggest economic opportunity of the twenty-first century." • The cars of the future: The competitively priced plug-in hybrids that will get 60 miles to the gallon, and the battle being waged by fifteen start-ups competing to capture the electric car market. • The fuels without fossils: New sources of energy from plants such as prairie grass and algae that could capture a big chunk of the \$300 billion U.S. wholesale gasoline market. • The corporate mavericks: Companies such as Duke Energy and GE who are creating the low-carbon business models of the future, as well as cleaner ways to provide our power needs. • The energy-miser homes and buildings: The new Bank of America Tower in New York City and the green low- and middle-income homes being constructed by visionaries who were told it couldn't be done and still be affordable. • The "thin film" solar energy: How it is making the cost of heating a home comparable to traditional methods without emitting greenhouse gas. Plenty of obstacles still exist--among them resistance from the rich and powerful owners of the world's oil supply, developing nations such as China with their reliance on coal, and an American public reluctant to give up their McMansions, SUVs, and extreme air-conditioning. But the battle cry has been sounded. The green overhaul of the utility, energy, construction, shipping, and automobile industries is well on its way and--contrary to prevailing fears--the ultimate solutions will sustain the environment without demanding huge sacrifices to our contemporary comforts and lifestyles.

Traumatic Scar Tissue Management Nancy Keeney Smith,Catherine Ryan,2016-03-01 The management of scar tissue is a huge and growing problem for massage and other manual therapists. Research has showed that appropriate massage treatment can have significant results both physically and psychologically. Existing books have chapters on the problem but there is no practical manual available on the subject at the present time which tells the therapist what to do (and what not to do). This book fills that gap, explaining the physiologic and pathophysiologic background, and providing practical guidance about how to help patients.

Menhirs, Dolmen, and Circles of Stone Gary R. Varner,2004 Why are some rocks simply tossed out of the way, while others, regardless of their size, are held as sacred, mysterious and imbued with power? Humans since the dawn of civilization have used stone to represent the holy, both by fashioning sacred symbols for themselves and by granting recognition to certain sites occurring naturally. Varner shares his love of nature lore, oral traditions, folklore and ancient religious structures that are still so abundant in the world, and offers insights on the history and the technology of these artifacts, while touching on the importance of preserving a sense of reverence in today's world. This study examines the universal appeal of sites from the Dome of the Rock and Stonehenge to sites sacred to the Inuit and the Cherokees, from the Middle East to the American Midwest and the English Midlands. Philosopher-historian Mircea Eliade wrote, a rock reveals itself to be sacred because its very existence is a hierophany: incompressible, invulnerable, it is that which man is not. It resists time; its reality is coupled with perennality. The properties of stone were recognized as unique early in humankind's rise to civilization. Even when cultures were transitioning their technologies from stone to metal, it was stone that was used for ritual and other important acts. Early 20th-century Egyptologist Wallis Budge wrote, in a tomb of the VIth Dynasty

at Sakkrah, when the Egyptians had a good knowledge of working in metals, we see in a painting on the wall the act of circumcision being performed on a youth by an operator who uses a flint knife. Little do the keepers of worry stones today realize that they are practicing one of the ancient traditions of transferring their problems to an inanimate object. This volume looks at customs and traditions from around the world, from the curious to the profound, related to stones large and small, from prehistory to today.

Numerical Solution of Partial Differential Equations on Parallel Computers Are Magnus Bruaset,Aslak Tveito,2006-03-05 Since the dawn of computing, the quest for a better understanding of Nature has been a driving force for technological development. Groundbreaking achievements by great scientists have paved the way from the abacus to the supercomputing power of today. When trying to replicate Nature in the computer's silicon test tube, there is need for precise and computable process descriptions. The scientific fields of Mathematics and Physics provide a powerful vehicle for such descriptions in terms of Partial Differential Equations (PDEs). Formulated as such equations, physical laws can become subject to computational and analytical studies. In the computational setting, the equations can be discretized for efficient solution on a computer, leading to valuable tools for simulation of natural and man-made processes. Numerical solution of PDE-based mathematical models has been an important research topic over centuries, and will remain so for centuries to come. In the context of computer-based simulations, the quality of the computed results is directly connected to the model's complexity and the number of data points used for the computations. Therefore, computational scientists tend to fill even the largest and most powerful computers they can get access to, either by increasing the size of the data sets, or by introducing new model terms that make the simulations more realistic, or a combination of both. Today, many important simulation problems can not be solved by one single computer, but calls for parallel computing.

An Indispensable Truth Francis Chen,2011-04-11 Recent books have raised the public consciousness about the dangers of global warming and climate change. This book is intended to convey the message that there is a solution. The solution is the rapid development of hydrogen fusion energy. This energy source is inexhaustible and, although achieving fusion energy is difficult, the progress made in the past two decades has been remarkable. The physics issues are now understood well enough that serious engineering can begin. The book starts with a summary of climate change and energy sources, trying to give a concise, clear, impartial picture of the facts, separate from conjecture and sensationalism. Controlled fusion -- the difficult problems and ingenious solutions -- is then explained using many new concepts. The bottom line -- what has yet to be done, how long it will take, and how much it will cost -- may surprise you. Francis F. Chen's career in plasma has extended over five decades. His textbook Introduction to Plasma Physics has been used worldwide continuously since 1974. He is the only physicist who has published significantly in both experiment and theory and on both magnetic fusion and laser fusion. As an outdoorsman and runner, he is deeply concerned about the environment. Currently he enjoys bird photography and is a member of the Audubon Society.

Negotiating the Sacred II Elizabeth Burns Coleman,Maria Suzette Fernandes-Dias,2008-12-01 Blasphemy and other forms of blatant disrespect to religious beliefs have the capacity to create significant civil and even international unrest. Consequently, the sacrosanctity of religious dogmas and beliefs, stringent laws of repression and codes of moral and ethical propriety have compelled artists to live and create with occupational hazards like uncertain audience response, self-censorship and accusations of deliberate misinterpretation of cultural production looming over their heads. Yet, in recent years, issues surrounding the rights of minority cultures to recognition and respect have raised new questions about the contemporariness of the construct of blasphemy and sacrilege. Controversies over the aesthetic representation of the sacred, the exhibition of the sacred as art, and the public display of sacrilegious or blasphemous works have given rise to heated debates and have invited us to reflect on binaries like artistic and religious sensibilities, tolerance and philistinism, the sacred and the profane, deification and vilification. Endeavouring to move beyond 'simplistic' points about the rights to freedom of expression and sacrosanctity, this collection explores how differences between conceptions of the sacred can be negotiated. It recognises that blasphemy may be justified as a form of political criticism, as well as a sincere expression of spirituality. But it also recognises that within a pluralistic society, blasphemy in the arts can do an enormous amount of harm, as it may also impair relations within and between societies. This collection evolved out a two-day conference called 'Negotiating the Sacred: Blasphemy and Sacrilege in the Arts' held at the Centre for Cross Cultural Research at The Australian National University in November 2005. This is the second volume in a series of five conferences and edited collections on the theme 'Negotiating the Sacred'. The first conference, 'Negotiating the Sacred: Blasphemy and Sacrilege in a Multicultural Society' was held at The Australian National University's Centre for Cross-Cultural Research in 2004, and published as an edited collection by ANU E Press in 2006. Other conferences in the series have included Religion, Medicine and the Body (ANU, 2006), Tolerance, Education and the Curriculum (ANU, 2007), and Governing the Family (Monash University, 2008). Together, the series represents a major contribution to ongoing debates on the political demands arising from religious pluralism in multicultural societies.

Radioactive Waste Management In The 21st Century William R Roy,2021-06-10 The safe management of radioactive wastes is of paramount importance in gaining both governmental and societal support for nuclear energy. The scope of this new textbook is to provide a comprehensive perspective on all types of radioactive wastes as to how they are created, classified, characterized, and disposed. Written to emphasize how geology and radionuclide chemistry impact waste management, this book is primarily designed for engineers who have little background in geology with low-level wastes, decommissioning wastes, high-level wastes and spent nuclear fuel. This textbook provides the most up-to-date information available on waste management in several countries. The content of this work includes transporting radioactive

materials to disposal facilities. The textbook cites numerous case studies to illustrate past practices, current methodologies and to provide insights on how radioactive wastes may be managed in the future. An international perspective on waste management is also provided to help the readers better understand the diversity in approaches while highlighting what many countries have in common. Review questions for classroom use are provided at the end of each chapter.
