India Now and In transition Atul K. Thakur,2017-05-30 India is the world's largest democracy with nearly 70 years of independent existence. Its unique and ever-changing nature has sparked a great degree of academic debate, both before and since Independence. The beauty of India is that there are many kinds of Indias. Understanding the fundamentals that have given birth to such multiplicity across various segments is especially imperative in the present day, when the 'Idea of India' is keenly contested. Our nation has the world's largest youth population and is undergoing tectonic social and political changes at present; therefore, understanding what directions India may take in the future is essential for every thinking individual. India Now and in Transition is an enquiry into possible futures, based on current happenings. Featuring contributions from leading

thinkers and scholars in diverse fields, each essay in this volume critically analyses a major theme of India's present, to propose the likely way ahead for our emergent nation. Covering the fields of politics and governance, economics and development, security and foreign policy, society and culture and language and literature, the book shows that—while beset with both internal and external challenges on many fronts—India isn't waiting for its moment, it's making its moment happen.

Lagoons of Sri Lanka Silva, E. I. L.,Katupotha, J.,Amarasinghe, O.,Manthrithilake, H.,Ariyaratna, R.,2013-03-01 Sri Lanka, an island in the Indian Ocean, has lagoons along 1,338 km of its coastline. They experience low-energy oceanic waves and semidiurnal microtidal currents. The Sri Lankan coastal lagoons are not numerous but they are diverse in size, shape, configuration, ecohydrology, and ecosystem values and services. The heterogeneous nature, in general, and specific complexities, to a certain extent, exhibited by coastal lagoons in Sri Lanka are fundamentally determined by coastal and adjoining hinterland geomorphology, tidal fluxes and fluvial inputs, monsoonal-driven climate and weather, morphoedaphic attributes, and cohesive interactions with human interventions.Most coastal lagoons in Sri Lanka are an outcome of mid-Holocene marine transgression and subsequent barrier formation and spit development enclosing the water body between the land and the sea. This process has varied from one coastal stretch to another due to wave-derived littoral drift, sediment transport by tidal fluxes, fluvial inputs and wave action or, in other words, sea-level history, shore-face dynamics and tidal range as the three major factors that control the origin and maintenance of the sandy barrier, the most important features for the formation and evolution of coastal lagoons with their landward water mass. In certain stretches of Sri Lanka's coastline, formation of the barrier spit was very active due to shore-face dynamics that resulted in chains of shore parallel, elongated lagoons. They are among the most productive in terms of ecosystem yield and show some similarities to large tropical lagoons with respect to sea entrance, zonation, biodiversity and ecosystem services. However, some of them become seasonally hypersaline due to lack of freshwater input and high evaporation. Functions and processes of some of these water bodies are fairly known. There are a fair number of small back-barrier lagoons of different shapes and sizes whose origin goes back to sea-level history. They are located on low-energy coasts with prominent beach ridges and restricted hinterland geomorphology. Mixing processes of these landward indentations are hindered by elevated sand dunes, and their salinity increases due to poor freshwater input and high evaporation leading to seasonally hypersaline conditions. These sedimented lagoons, primarily confined to the southeastern coast of the island, are biologically the least productive, with limited ecosystem values and services. Another group of moderately elongated semicircular, slightly large lagoons in the same coast, formed exclusively by submergence due to mid-Holocene sea-level rises, do not receive sufficient freshwater input leading to seasonally hypersaline conditions. They are also biologically unproductive but some are ecologically important since they provide habitats conducive to migratory birds. In contrast, some lagoons on the southern coast receive sufficient freshwater via streams draining the wet zone, maintain more estuarine salinities, exhibit rich biodiversity and serve as functional resource units. Lagoons formed by mid-Holocene submergence and recession of water level with simultaneous chain barrier formation on the high energy southwest coast, which includes cliffs, small bays and headlands, show peculiar

configurations and link channel characteristics. Some of these irregular water bodies have clusters of small isles and luxuriant mangrove swamps with high biodiversity but not very rich in catadromous finfish and shellfish species due to the restricted nature of the entrance channel and nondistinct salinity gradients. The barrier-built, seasonally hypersaline lagoon complex in the Jaffna Peninsula, the largest lagoon system in the country with multiple perennial entrances show extremely narrow salinity ranges towards the upper limit of salinity. The main lagoon is elongated and the shore parallel to eastward and southward extensions is connected by narrow channels. The other lagoon in the Jaffna Peninsula is elongated, shore parallel and ribbon-shaped and receives tidal water throughout the year but freshwater is received only from precipitation and surface runoff. Even though the lagoons in the peninsula are extremely rich in ecosystem heterogeneity their hydrology and hydrodynamics have been severely disturbed by infrastructural development for transportation and by attempts to create a freshwater river for Jaffna. There are a few virgin lagoons of moderate size also on the northern coast, south of the Jaffna Peninsula on both the east and west sides. They look very typical tropical lagoons rich in biodiversity and biological production but their structure, functions and values are virtually unknown in scientific or socioeconomic terms. The lagoons located on the east coast are not numerous but relatively large in extent. They are also an outcome not only of mid-Holocene sea-level rises but of submerged multi-delta valleys or abandoned paleo estuaries. When inundated, the multi-delta valley configuration became elongated and is shore parallel with a smooth seaward shoreline; both shorelines become irregular when coastal waves are weak, and internal waves are created by the action of local winds. Configuration of a lagoon formed by inundation of an abandoned river valley is irregular with a long entrance channel extended landward. These lagoons are highly productive with a variety of associated ecosystems, large open water areas and wide perennial sea entrances. When the lagoon is too much elongated, zonation is prominent due to fewer entrance effects. Lagoons form a particular type of natural capital which generates use values (fish, shrimp, fuelwood, salt, fodder, ecotourism, anchorage, recreation, etc.) and nonuse values (habitat preservation, biodiversity, ecosystem linkages, etc.) contributing positively towards improving the human well-being. Of many values of lagoons in Sri Lanka, only the extractive values are generally utilized at present, by way of fish and shrimp catches, salt production and use of mangrove for various purposes. Besides, coastal lagoons generate a range of nonextractive use values and nonuse values, which could add towards the total economic value. Misuse has taken place at several instances when "use" adversely affects the status of the resources or the health of the ecosystem due to vulnerability and poverty, population pressure, urbanization, development activities and multi-stakeholder issues. The status of lagoon resources shows that the resources in the majority of Sri Lankan lagoons still remain satisfactory, somewhat good or very good. Nevertheless, concerns for management of lagoons in Sri Lanka exist only where "use values" (extractive values, such as fish and shrimp) exist. There is no evidence of resources management in lagoons for inspirational, scholarly values or tacit knowledge of the same. Management for use values exhibits several stages from zero management to comanagement via community management and state intervention. Most of Sri Lanka's lagoons have the potential for generating high extractive and nonextractive use values which could improve the human well-being, while maintaining resources sustainability. Unfortunately, these potentials have not been understood or "seen" yet by the relevant authorities, although a few instances of exploring this potential were noticed.

The End of Human Rights Costas Douzinas,2000-06-01 The introduction of the Human Rights Act has led to an explosion in books on human rights, yet no sustained examination of their history and philosophy exists in the burgeoning literature. At the same time, while human rights have triumphed on the world stage as the ideology of postmodernity, our age has witnessed more violations of human rights than any previous, less enlightened one. This book fills the historical and theoretical gap and explores the powerful promises and disturbing paradoxes of human rights. Divided in two parts and fourteen chapters, the book offers first an alternative history of natural law, in which natural rights represent the eternal human struggle to resist domination and oppression and to fight for a society in which people are no longer degraded or despised. At the time of their birth, in the 18th century, and again in the popular uprisings of the last decade, human rights became the dominant critique of the conservatism of law. But the radical energy, symbolic value and apparently endless expansive potential of rights has led to their adoption both by governments wishing to justify their policies on moral grounds and by individuals fighting for the public recognition of private desires and has undermined their ends. Part Two examines the philosophical logic of rights. Rights, the most liberal of institutions, has been largely misunderstood by established political philosophy and jurisprudence as a result of their cognitive limitations and ethically impoverished views of the individual subject and of the social bond. The liberal approaches of Hobbes, Locke and Kant are juxtaposed to the classical critiques of the concept of human rights by Burke, Hegel and Marx. The philosophies of Heidegger, Strauss, Arendt and Sartre are used to deconstruct the concept of the (legal) subject. Semiotics and psychoanalysis help explore the catastrophic consequences of both universalists and cultural relativists when they become convinced about their correctness. Finally, through a consideration of the ethics of otherness, and with reference to recent human rights violations, it is argued that the end of

human rights is to judge law and politics from a position of moral transcendence. This is a comprehensive historical and theoretical examination of the discourse and practice of human rights. Using examples from recent moral foreign policies in Iraq, Rwanda and Kosovo, Douzinas radically argues that the defensive and emancipatory role of human rights will come to an end if we do not re-invent their utopian ideal.

World War I in Mesopotamia Nadia Atia,2015-01-12 The Mesopotamian campaign during World War I was a critical moment in Britain's position in the Middle East. With British and British Indian troops fighting in places which have become well-known in the wake of the 2003 invasion of Iraq, such as Basra, the campaign led to the establishment of the British Mandate in Iraq in 1921. Nadia Atia believes that in order to fully understand Britain's policies in creating the nascent state of Iraq, we must first look at how the war shaped Britons' conceptions of the region. Atia does this through a cultural and military history of the changing British perceptions of Mesopotamia since the period before World War I when it was under Ottoman rule. Drawing on a wide variety of historical and literary sources, including the writing of key figures such as Gertrude Bell, Mark Sykes and Arnold Wilson, but focusing mainly on the views and experiences of ordinary men and women whose stories and experiences of the war have less frequently been told, Atia examines the cultural and social legacy of World War I in the Middle East and how this affected British attempts to exert influence in the region.

World Atlas of Mangroves Mark Spalding,2010-09-23 Published with ISME, ITTO and project partners FAO, UNESCO-MAB, UNEP-WCMC and UNU-INWEH This atlas provides the first truly global assessment of the state of the world's mangroves. Written by a leading expert on mangroves with support from the top international researchers and conservation organizations, this full colour atlas contains 60 full-page maps, hundreds of photographs and illustrations and a comprehensive country-by-country assessment of mangroves. Mangroves are considered both ecologically and from a human perspective. Initial chapters provide a global view, with information on distribution, biogeography, productivity and wider ecology, as well as on human uses, economic values, threats, and approaches for mangrove management. These themes are revisited throughout the regional chapters, where the maps provide a spatial context or starting point for further exploration. The book also presents a wealth of statistics on biodiversity, habitat area, loss and economic value which provide a unique record of mangroves against which future threats and changes can be evaluated. Case-studies, written by regional experts provide insights into regional mangrove issues, including primary and potential productivity, biodiversity, and information on present and traditional uses and values and sustainable management.
