Advances in Concentrating Solar Thermal Research and Technology Manuel

Blanco,Lourdes Ramirez Santigosa,2016-11-10 After decades of research and development, concentrating solar thermal (CST) power plants (also known as concentrating solar power (CSP) and as Solar Thermal Electricity or STE systems) are now starting to be widely commercialized. Indeed, the IEA predicts that by 2050, with sufficient support over ten percent of global electricity could be produced by concentrating solar thermal power plants. However, CSP plants are just but one of the many possible applications of CST systems. *Advances in Concentrating Solar Thermal Research and Technology* provides detailed information on the latest advances in CST systems research and technology. It promotes a deep understanding of the challenges the different CST technologies are confronted with, of the research that is taking place worldwide to address those challenges, and of the impact that the innovation that this research is fostering could have on the emergence of new CST components and concepts. It is anticipated that these developments will substantially increase the cost-competitiveness of commercial CST solutions and reshape the technological landscape of both CST technologies and the CST industry. After an introductory chapter, the next three parts of the book focus on key CST plant components, from mirrors and receivers to thermal storage. The final two parts of the book address operation and control and innovative CST system concepts. Contains authoritative reviews of CST research taking place around the world Discusses the impact this research is fostering on the emergence of new CST components and concepts that will substantially increase the cost-competitiveness of CST power Covers both major CST plant components and system-wide issues

The Power of Love for Reaching Out to "the Other" Johnny Ramirez-Johnson,2023-08-24

Race is a result of God's design and not of sin. God loves diversity and sought it. Race biases are normal and come as a result of likes and dislikes; love of "the other" is to be learned. In this book, Bible stories and principles are combined with four intercultural communication skills to help develop love of the other. This book builds on what Sherwood Lingenfelter and Marvin K. Mayers developed for understanding cultural values and diversity of likes and dislikes. Those differences are normal. The problem comes from excluding the other. This book explores a step-wise approach to developing the love of the other. How the person, the leader, and the church see diversity defines the church's outreach, mission, and gospel fulfillment. Author's Own Words Book Description The Power of Love book explains how emotions and feelings were part of God's creation design from before sin entered this world. While departing from cognitive neuropsychology and the latest learning from science this seminar furthers the idea that race relations are not to be understood by sociology and science but by Bible and Christian beliefs. If you want to learn a non-CRT (critical race theory) approach to race relations while risking being, again, convicted of the need to reach out to the other in gospel love—enter into dialogue—with the author by reading his book and let us pray together. If you want to keep it safe and your intercultural relationships as they are—in a tongue in cheek way the author advises to—stay away from this book!

Energy Efficiency and Management in Food Processing Facilities Lijun Wang,2008-12-04

Energy efficiency, environmental protection, and processing waste management continue to attract increased attention in the food processing industry. As with other industrial sectors, reducing costs while also reducing environmental impact and improving overall sustainability is becoming an important part of the business process. Providing practical guidance, *Energy Efficiency and Management in Food Processing Facilities* explores energy efficiency technologies, emerging energy efficient processes, and methods for converting

food processing wastes into energy. Organized around five central themes, the book explores: Fundamentals of energy conservation, analysis, and management Energy conservation technologies as applied to the food processing industry Energy efficiency and conservations in current food processing systems Emerging systems Energy conversion technologies for utilization of food processing wastes Conservation Techniques that Improve the Bottom Line The lack of information on energy conservation and conversion technologies has been a major barrier to energy efficiency improvement and the utilization of processing wastes in the food processing industry. With coverage ranging from basic theory to traditional and alternative energy, this book provides the required skill set for the increased energy conservation and reduced consumption that will positively impact the bottom line in food processing facilities.

Sharing Power Grazia Borrini-Feyerabend,M. Taghi Farvar,Yves Renard,Michel P Pimbert,Ashish Kothari,2013-09-13 The collaborative orco-management of natural resources - whether between states and local communities or amongst and within communities themselves - is a process of collective understanding and actions to bring about negotiated agreements on roles, rights and responsibilities for decentralized governance of natural resources. At heart, co-management is about sharing power, one of the most difficult but rewarding experiences in personal and social life. The book is designed for professionals and people involved in practical co-management processes, and distils a wealth of experience and innovative approaches learned by doing. It begins by offering a variety of vistas, from historical analyses to a clear grasp of key concepts. Illustrated in detail is the understanding accumulated in recent decades on starting points for co-management, conditions and methods for successful negotiations, ideas to manage conflicts and types of agreements and co-management institutions emerging from the negotiation tables. Simple tools, such as checklists distilled from different situations and contexts, are offered throughout. Examples and insights from experience highlight the importance of participatory democracy - the enabling contexts where 'sharing power is ultimately possible and successful. Routledge Handbook of Energy Economics Uğur Soytaş,Ramazan Sarı,2019-09-23 Energy consumption and production have major influences on the economy, environment,

and society, but in return they are also influenced by how the economy is structured, how the social institutions work, and how the society deals with environmental degradation. The need for integrated assessment of the relationship between energy, economy, environment, and society is clear, and this handbook offers an in-depth review of all four pillars of the energy-economy-environment-society nexus. Bringing together contributions from all over the world, this handbook includes sections devoted to each of the four pillars. Moreover, as the financialization of commodity markets has made risk analysis more complicated and intriguing, the sections also cover energy commodity markets and their links to other financial and non-financial markets. In addition, econometric modeling and the forecasting of energy needs, as well as energy prices and volatilities, are also explored. Each part emphasizes the multidisciplinary nature of the energy economics field and from this perspective, chapters offer a review of models and methods used in the literature. The Routledge Handbook of Energy Economics will be of great interest to all those studying and researching in the area of energy economics. It offers guideline suggestions for policy makers as well as for future research.

Transboundary Policy Challenges in the Pacific Border Regions of North America Donald K. Alper, John Chadwick Day, James Loucky, 2008 *Transboundary Policy Challenges* responds to a growing interest in borderlands environmental policy by highlighting significant transboundary research and practices being undertaken within and across the Pacific border regions of North America. Growing concern about the seriousness of environmental problems, particularly in high-growth border areas, coupled with the rising awareness of the complexities entailed in wise development decisions, has spurred recognition that new realities require new responses. Critical for effective environmental protection, restoration, and education is a sharing of understanding and effort across borders. *Transboundary Policy Challenges* advances transborder environmental research

and discusses sensible policy directions with particular focus on critical areas of international concern and engagement: land and water use planning; regional growth management; trade and transportation corridors; environmental education; and travel and tourism. Contributors to the volume represent a range of disciplines, as well as institutions in Canada, the United States, and Mexico.

Non-Conventional Energy Resources N.K. Bansal, Energy is the hottest topic of concern in the world today. Fast receding stocks of conventional resources impelled governments worldwide to include renewable energy sources in their energy programmes. Newer, non-conventional methods need to be developed before the conventional stocks are totally exhausted. More and more universities in India are including the studies on renewable, non-conventional resources in their curricula in the 4th year of their BE/BTech (Mechanical) programmes. This book caters to such courses as a full-fledged textbook. It covers a wide range of topics from the origin of all energy sources, their manifestation, availability, resource assessment to science and technology of renewable energy conversion processes. Every chapter enunciates its learning objectives before beginning the discussion and offers insightful questions in the end. Renewable energy is going to be a very important part of the whole energy chain and its know-how will be essential at various levels of education, especially in science and engineering. Considering this fact, this book will also serve as a knowledge compendium for the seekers in renewal energy sources and technology.

Prospects for Carbon Capture and Storage in Southeast Asia Asian Development Bank, 2013-09-01 This report was produced under the Technical Assistance Grant: Determining the Potential for Carbon Capture and Storage (CCS) in Southeast Asia (TA 7575-REG), and is focused on an assessment of the CCS potential in Thailand, Viet Nam, and specific regions of Indonesia (South Sumatra) and the Philippines (Calabarzon). It contains inventories of carbon dioxide emission sources, estimates of overall storage potential, likely source-sink match options for potential CCS projects, and an analysis of existing policy, legal, and regulatory frameworks with a view toward supporting future CCS operations. The report also presents a comparative financial analysis of candidate CCS projects, highlights possible incentive schemes for financing CCS, and provides an actionable road map for pilot, demonstration, and commercial CCS projects.

Addicted to Failure Brian Loveman, 2006 For supplementary documentation and useful websites, click here. This perceptive book critically explores why the United States continues to pursue failed policies in Latin America. What elements of the U.S. and Latin American political systems have allowed the Cold War, the war on drugs, and the war on terror to be conflated? Why do U.S. policies--ostensibly designed to promote the rule of law, human rights, and democracy--instead contribute to widespread corruption, erosion of government authority, human rights violations, and increasing destabilization? Why have the war on drugs and the war on terror neither reduced narcotics trafficking nor increased citizen security in Latin America? Why do Latin American governments, the European Union, and U.S. policymakers often work at cross-purposes when they all claim to be committed to democratization and development in the region? Leading scholars answer these questions by detailing the nature of U.S. economic and security strategies in Latin America and the Andean region since 1990. They analyze the impacts and responses to these strategies by policymakers, political leaders, and social movements throughout the region, explaining how programs often generate or exacerbate the very problems they were intended to solve. Reviewing official policy and its defenders and critics alike, this indispensable book focuses on the reasons for the failure of U.S. policies and their disastrous significance for Latin America and the United States alike. PV Charging and Storage for Electric Vehicles Pavol Bauer, Gautham Ram Chandra

Mouli,2021-09-02 Electric vehicles are only 'green' as long as the source of electricity is 'green' as well. At the same time, renewable power production suffers from diurnal and seasonal variations, creating the need for energy storage technology. Moreover, overloading and voltage problems are expected in the distributed network due to the high penetration of distributed generation and increased power demand from the charging of electric vehicles. The energy and mobility transition hence calls for novel technological innovations in the field of sustainable electric mobility powered from renewable energy. This Special Issue focuses on recent advances in technology for PV charging and storage for electric vehicles.

The Elements of Power David S. Abraham,2015-10-28 Our future hinges on a set of elements that few of us have even heard of. In this surprising and revealing book, David S. Abraham unveils what rare metals are and why our electronic gadgets, the most powerful armies, and indeed the fate of our planet depend on them. These metals have become the building blocks of modern society; their properties are now essential for nearly all our electronic, military, and "green" technologies. But their growing use is not without environmental, economic, and geopolitical consequences. Abraham traces these elements' hidden paths from mines to our living rooms, from the remote hills of China to the frozen Gulf of Finland, providing vivid accounts of those who produce, trade, and rely on rare metals. He argues that these materials are increasingly playing a significant role in global affairs, conferring strength to countries and companies that can ensure sustainable supplies. Just as oil, iron, and bronze revolutionized previous eras, so too will these metals. The challenges this book reveals, and the plans it proposes, make it essential reading for our rare metal age.

One Nation Under Blackmail - Vol. 1 Whitney Alyse Webb,2022-10-20 Exposes vastly under-explored topics compared to other media reports and books on Jeffrey Epstein How did Jeffrey Epstein manage to evade justice for decades? Who enabled him and why? Why were legal officials told that Epstein " belonged to intelligence" and to back off during his first arrest in the mid-2000s? Volume 1 of One Nation Under Blackmail traces the origin of the network behind Jeffrey Epstein and his associates to the merging of organized crime and intelligence networks during World War II and follows their most notable activities through the decades. Various scandals, acts of corruption and other crimes throughout the last several decades of American history, many involving sex blackmail, can be traced back to these same networks, which have subverted and taken control of many of America' s most important institutions for their benefit, and to the detriment of the public.

Energy Kingdoms Jim Krane,2019-01-08 After the discovery of oil in the 1930s, the Gulf monarchies—Saudi Arabia, Kuwait, Qatar, the United Arab Emirates, Oman, and Bahrain—went from being among the world's poorest and most isolated places to some of its most ostentatiously wealthy. To maintain support, the ruling sheikhs provide their subjects with boundless cheap energy, unwittingly leading to some of the highest consumption rates on earth. Today, as summertime temperatures set new records, the Gulf's rulers find themselves caught in a dilemma: can they curb their profligacy without jeopardizing the survival of some of the world's last absolute monarchies? In Energy Kingdoms, Jim Krane takes readers inside these monarchies to consider their conundrum.

He traces the history of the Gulf states' energy use and policies, looking in particular at how energy subsidies have distorted demand. Oil exports are the lifeblood of their political-economic systems—and the basis of their strategic importance—but domestic consumption has begun eating into exports while climate change threatens to render their desert region uninhabitable. At risk are the sheikdoms' way of life, their relations with their Western protectors, and their political stability in a chaotic region. Backed by rich fieldwork and deep knowledge of the region, Krane expertly lays out the hard choices that Gulf leaders face to keep their states viable.

Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community, 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
