Conifer Seedling Mineral Nutrition R. van den Driessche,1990-12-13 Conifer Seedling Mineral Nutrition provides a comprehensive review of conifer seedling mineral nutrition and its significance to forestry. The book covers relationships between mineral supply and uptake; the effects of nutrition on seedling growth; an integration of the ideas of T. Ingestad with classical growth analysis concepts; practical aspects of assessing nutrient status and details of fertilizing bare root and container nursery stock; and fertilizing vegetative propagules. The book also describes and illustrates Mycorrhizas, assessing their importance to plantation establishment in an analysis of recent papers reporting field trials. The effects of nutrients on stress resistance and establishment when applied in the nursery and while planting are discussed in the final chapter. It will prove useful to reforestation research workers, nurserymen, and silviculturalists and should be considered essential reading for forestry students.

Structure and Function of Plant Roots R. Brouwer,1981-12-31 The 2nd International Symposium on Structure and Function of Roots organised by the Slovak Academy of Sciences was held in Bratislava in early September 1980 and continued the theme of its 1971 predecessor at Tatranska Lomnica. The symposium started with 'structural characteristics of roots in relation to the process of growth'. The approach was notable for the way in which it brought together cytologists, electron microscopists and physiologists to discuss problems of common interest and set the scene for a multidisciplinary approach to the remainder of the Symposium. Metabolic aspects of roots under normal conditions and after being exposed to stress received considerable attention, together with interesting contributions concerned with responses of roots to gravity. The session on water movement provided a useful balance between theoretical papers on the one hand and the results of the use of new experimental approaches to the problem on the other. The Symposium continued with the examination of factors affecting the transport of ions into and across roots, particular attention focussing on metabolic aspects concerned with delivery of ions to the shoot. The problems associated with coordinating the separate functions of the root were introduced by a group of papers, again supported by contributions in which new experimental methods were described.
