Algorithms : Sequential & Parallel (2Nd Ed.) Russ Miller,2005-10-11 With multi-core processors replacing traditional processors and the movement to multiprocessor workstations and servers, parallel computing has moved from a specialty area to the core of computer science. In order to provide efficient and cost-effective solutions to problems, algorithms must be designed for multiprocessor systems. Algorithms: Sequential and Parallel provides a state-of-the-art approach to an algorithms course. The book considers algorithms, paradigms, and the analysis of solutions to critical problems for sequential and parallel models of computation in a unified fashion. This gives practicing engineers and scientists, undergraduates, and beginning graduate students a background in algorithms for sequential and parallel algorithms within one text. Prerequisites include fundamentals of data structures, discrete mathematics, and calculus.

Parallel Computing for Bioinformatics and Computational Biology Albert Y. Zomaya,2006-04-14 Discover how to streamline complex bioinformatics applications withparallel computing This publication enables readers to handle more complexbioinformatics applications and larger and richer data sets. As theeditor clearly shows, using powerful parallel computing tools canlead to significant breakthroughs in deciphering genomes,understanding genetic disease, designing customized drug therapies,and understanding evolution. A broad range of bioinformatics applications is covered withdemonstrations on how each one can be parallelized to improveperformance and gain faster rates of computation. Current parallelcomputing techniques and technologies are examined, includingdistributed computing and grid computing. Readers are provided witha mixture of algorithms, experiments, and simulations that providenot only qualitative but also quantitative insights into thedynamic field of bioinformatics. Parallel Computing for Bioinformatics and Computational Biology isa contributed work that serves as a repository of case studies,collectively demonstrating how parallel computing streamlinesdifficult problems in bioinformatics and produces better results.Each of the chapters is authored by an established expert in thefield and carefully edited to ensure a consistent approach and highstandard throughout the publication. The work is organized into five parts: * Algorithms and models * Sequence analysis and microarrays * Phylogenetics * Protein folding * Platforms and enabling technologies Researchers, educators, and students in the field of bioinformatics will discover how high-performance computing can enable them tohandle more complex data sets, gain deeper insights, and make newdiscoveries.

98. 6 Degrees Cody Lundin,2011-05-16 If you breathe and have a pulse, you NEED this book. -Cody Lundin Cody Lundin, director of the Aboriginal Living Skills School in Prescott, Arizona, shares his own brand of wilderness wisdom in this highly anticipated new book on commonsense, modern survival skills for the backcountry, the backyard, or the highway. It is the ultimate book on how to stay alive-based on the principal of keeping the body's core temperature at a lively 98.6 degrees. In his entertaining and informative style, Cody stresses that a human can live without food for weeks, and without water for about three days or so. But if the body's core temperature dips much below or above the 98.6 degree mark, a person can literally die within hours. It is a concept that many don't take seriously or even consider, but knowing what to do to maintain a safe core

temperature when lost in a blizzard or in the desert could save your life. Lundin delivers the message with wit, rebellious humor, and plenty of backcountry expertise. Cody Lundin and his Aboriginal Living Skills School have been featured in dozens of national and international media sources, including Dateline NBC, CBS News, USA Today, The Donny and Marie Show, and CBC Radio One in Canada, as well as on the cover of Backpacker magazine. When not teaching for his own school, he is an adjunct faculty member at Yavapai College and a faculty member at the Ecosa Institute. Cody is the only person in Arizona licensed to catch fish with his hands, and lives in a passive solar earth home sixty miles from Prescott, Arizona.

The Unthinkable Amanda Ripley, 2009-06-16 Discover how human beings react to danger-and what makes the difference between life and death Today, nine out of ten Americans live in places at significant risk of earthquakes, hurricanes, tornadoes, terrorism, or other disasters. Tomorrow, some of us will have to make split-second choices to save ourselves and our families. How will we react? What will it feel like? Will we be heroes or victims? In her quest to answer these questions, award-winning journalist Amanda Ripley traces human responses to some of recent history's epic disasters, from the explosion of the Mont Blanc munitions ship in 1917-one of the biggest explosions before the invention of the atomic bomb-to the journeys of the 15,000 people who found their way out of the World Trade Center on September 11, 2001. To understand the science behind the stories, Ripley turns to leading brain scientists, trauma psychologists, and other disaster experts. She even has her own brain examined by military researchers and experiences, through realistic simulations, what it might be like to survive a plane crash into the ocean or to escape a raging fire. Ripley comes back with precious wisdom about the surprising humanity of crowds, the elegance of the brain's fear circuits, and the stunning inadequacy of many of our evolutionary responses. Most unexpectedly, she discovers the brain's ability to do much, much better-with just a little help.

Nothing Created Everything Ray Comfort, 2009 Richard Dawkins is arguably the modern poster boy for Charles Darwin. However, a key difference radically separates the two men. Darwin believed in the existence of God and calls God the Creator seven times in The Origin of Species. Dawkins, in contrast, claims, The more you understand the significance of evolution, the more you are pushed...towards atheism. It seems Professor Dawkins thinks Charles Darwin didn't understand his own theory. Just months after the 2009 discovery of the supposed missing link, author Ray Comfort turns the tables on evolutionists. In Nothing Created Everything, he examines the evidence for evolution and shows it is lacking. He demonstrates that when it comes to explaining how life began, atheists and evolutionists offer faith not facts. Ironically, atheists insist nothing created everything, a scientific

impossibility. In a conversational tone, Comfort speaks to both atheists and believers and urges this discussion be based on hard evidence. And when it is, he insists, people will realize evolution is a theory that can't be tested or measured and therefore can't be scientific.

Eldritch Tales H.P. Lovecraft, 2011-07-21 Following on from the phenomenal success of *NECRONOMICON* comes *ELDRITCH TALES*. Howard Phillips Lovecraft died at the age of 47, but in his short life he turned out dozens of stories which changed the face of horror. His extraordinary imagination spawned both the Elder God Cthulhu and his eldritch cohorts, and the strangely compelling town of Innsmouth, all of which feature within these pages. This collection gathers together the rest of Lovecraft's rarely seen but extraordinary short fiction, including the whole of the long-out-of-print collection *FUNGI FROM YOGGOTH*. Many of these stories have never been available in the UK! Stephen Jones, one of the world's foremost editors of dark fiction, will complete the Lovecraft story in his extensive afterword, and award-winning artist Les Edwards will provide numerous illustrations for this must-have companion volume to *NECRONOMICON*.

The Oxford Handbook of the New Private Law Andrew S. Gold, Carter Professor of General Jurisprudence John C P Goldberg, John C. P. Goldberg, Daniel B. Kelly, Frank B Ingersol Professor of Law Emily Sherwin, Henry E. Smith, 2020-11-06 This book discusses developments in scholarship dedicated to reinvigorating the study of the broad domain of private law. This field, which embraces the traditional common law subjects-property, contracts, and torts-as well as adjacent, more statutory areas, such as intellectual property and commercial law, also includes important subjects that have been neglected in the United States but are beginning to make a comeback. The book particularly focuses on the New Private Law, an approach that aims to bring a new outlook to the study of private law by moving beyond reductively instrumentalist policy evaluation and narrow, rule-by-rule, doctrine-by-doctrine analysis, so as to consider and capture how private law's various features fit and work together, as well as the normative underpinnings of these larger structures. This movement is resuscitating the notion of private law itself in United States and has brought an interdisciplinary perspective to the more traditional, doctrinal approach prevalent in Commonwealth countries. The book embraces a broad range of perspectives to private law-including philosophical, economic, historical, and psychological- yet it offers a unifying theme of seriousness about the structure and content of private law.--

Love, Janis Laura Joplin, 2017-12-26 A revealing and intimate biography about Janis Joplin, the Queen of Classic Rock, written by her younger sister. Janis Joplin blazed across the sixties music scene, electrifying audiences with her staggering voice and the way she seemed to pour her very soul into her music. By the time her life and artistry were cut tragically short by a heroin overdose, Joplin had become the stuff of rock-and-roll legend. Through the eyes of her family and closest friends , we see Janis as a young girl, already rebelling against injustice, racism, and hypocrisy in society. We follow Janis as she discovers her amazing talents in the Beat hangouts of Venice and North Beach-singing in coffeehouses, shooting speed to enhance her creativity, challenging

the norms of straight society. Janis truly came into her own in the fantastic, psychedelic, acid-soaked world of Haight-Asbury. At the height of her fame, Janis's life is a whirlwind of public adoration and hard living. Laura Joplin shows us not only the public Janice who could drink Jim Morrison under the table and bean him with a bottle of booze when he got fresh; she shows us the private Janis, struggling to perfect her art, searching for the balance between love and stardom, battling to overcome her alcohol addiction and heroin use in a world where substance abuse was nearly universal. At the heart of *Love, Janis* is an astonishing series of letters by Janis herself that have never been previously published. In them she conveys as no one else could the wild ride from awkward small-town teenager to rock-and-roll queen. *Love, Janis* is the new life of Janis Joplin we have been waiting for—a celebration of the sixties' joyous experimentation and creativity, and a loving, compassionate examination of one of that era's greatest talents.

Cyber Espionage and International Law Russell Buchan, 2018-12-27 The advent of cyberspace has led to a dramatic increase in state-sponsored political and economic espionage. This monograph argues that these practices represent a threat to the maintenance of international peace and security and assesses the extent to which international law regulates this conduct. The traditional view among international legal scholars is that, in the absence of direct and specific international law on the topic of espionage, cyber espionage constitutes an extra-legal activity that is unconstrained by international law. This monograph challenges that assumption and reveals that there are general principles of international law as well as specialised international legal regimes that indirectly regulate cyber espionage. In terms of general principles of international law, this monograph explores how the rules of territorial sovereignty, non-intervention and the non-use of force apply to cyber espionage. In relation to specialised regimes, this monograph investigates the role of diplomatic and consular law, international human rights law and the law of the World Trade Organization in addressing cyber espionage. This monograph also examines whether developments in customary international law have carved out espionage exceptions to those international legal rules that otherwise prohibit cyber espionage as well as considering whether the doctrines of self-defence and necessity can be invoked to justify cyber espionage. Notwithstanding the applicability of international law, this monograph concludes that policymakers should nevertheless devise an international law of espionage which, as *lex specialis*, contains rules that are specifically designed to confront the growing threat posed by cyber espionage.

Cyber Attacks and International Law on the Use of Force Samuli Haataja, 2019 Examining the thematic intersection of law, technology and violence, this book explores cyber attacks against states and current international law on the use of force. The theory of information ethics is used to critique the law's conception of violence and to develop an informational approach as an alternative way to think about cyber attacks. Cyber attacks against states constitute a new form of violence in the information age, and international law on the use of force is limited in its capacity to regulate them. This book draws on Luciano Floridi's theory of information ethics to critique the narrow conception of violence embodied in the law and to develop an alternative way to think about cyber attacks, violence, and the state. The author uses three case studies – the 2007 cyber attacks against Estonia, the Stuxnet incident involving Iran that was discovered in 2010, and the cyber attacks used as part of the Russian interference in the 2016 US presidential election – to demonstrate that an informational approach offers a means to reimagine the state as an entity and cyber attacks as a form of violence against it. This interdisciplinary approach will appeal to an international audience of scholars in international law, international relations, security studies, cyber security, and anyone interested in the issues surrounding emerging technologies.
