Eugenics and the Nature-Nurture Debate in the Twentieth Century A. Gillette, 2007-10-29 Gillette shows that the sciences of sociobiology and evolutionary psychology were undergoing rapid development in the early Twentieth century. However, many of the early researchers in these sciences were also eugenicists. With the rise of behaviourism and the reaction against eugenics in the 1930s, any scientific claims that behaviour might be influenced by heredity were suppressed for ideological reasons.

The Cult of Pharmacology Richard DeGrandpre, 2006-11-27 America had a radically different relationship with drugs a century ago. Drug prohibitions were few, and while alcohol was considered a menace, the public regularly consumed substances that are widely demonized today. Heroin was marketed by Bayer Pharmaceuticals, and marijuana was available as a tincture of cannabis sold by Parke Davis and Company. Exploring how this rather benign relationship with psychoactive drugs was transformed into one of confusion and chaos, *The Cult of Pharmacology* tells the dramatic story of how, as one legal drug after another fell from grace, new pharmaceutical substances took their place. Whether Valium or OxyContin at the pharmacy, cocaine or meth purchased on the street, or alcohol and tobacco from the corner store, drugs and drug use proliferated in twentieth-century America despite an escalating war on "drugs." Richard DeGrandpre, a past fellow of the National Institute on Drug Abuse and author of the best-selling book *Ritalin Nation*, delivers a remarkably original interpretation of drugs by examining the seductive but ill-fated belief that they are chemically predestined to be either good or evil. He argues that the determination to treat the medically sanctioned use of drugs such as Miltown or Seconal separately from the illicit use of substances like heroin or ecstasy has blinded America to how drugs are transformed by the manner in which a culture deals with them. Bringing forth a wealth of scientific research showing the powerful influence of social and psychological factors on how the brain is affected by drugs, DeGrandpre demonstrates that psychoactive substances are not angels or demons irrespective of why, how, or by whom they are used. *The Cult of Pharmacology* is a bold and necessary new account of America's complex relationship with drugs.

The Spatial Dimension of Risk Hans-Detlef Müller-Mahn, 2013 Through its exploration of the spatial dimension of risk, this book offers a brand new approach to theorizing risk, and significant improvements in how to manage, tolerate and take risks. A broad range of risks are examined, including natural hazards, climate change, political violence, and state failure. Case studies range from the Congo to Central Asia, from tsunami in Japan and civil war affected areas in Sri Lanka to avalanche hazards in Austria. In each of these cases, the authors examine the importance and role of space in the causes and differentiation of risk, in how we can conceptualize risk from a spatial perspective and in the relevance of space and locality for risk governance. This new approach – endorsed by Ragnar Löfstedt and Ortwin Renn, two of the world's leading and most prolific risk analysts – is essential reading for those charged with studying, anticipating and managing risks.

Human Evolutionary Psychology Louise Barrett,Robin Dunbar,John Lycett,2002-02-17 Why do people resort to plastic surgery to look young? Why are stepchildren at greatest risk of fatal abuse? Why do we prefer gossip to algebra? Why must Dogon wives live alone in a dark hut for five days a month? Why are young children good at learning language but not sharing? Over the past decade, psychologists and behavioral ecologists have been finding answers to such seemingly unrelated questions by applying an evolutionary perspective to the study of human behavior and psychology. Human Evolutionary Psychology is a comprehensive, balanced, and readable introduction to this burgeoning field. It combines a sophisticated understanding of the basics of evolutionary theory with a solid grasp of empirical case studies. Covering not only such traditional subjects as kin selection and mate choice, this text also examines more complex understandings of marriage practices and inheritance rules and the way in which individual action influences the structure of societies and aspects of cultural evolution. It critically assesses the value of evolutionary explanations to humans in both modern Western society and traditional preindustrial societies. And it fairly presents debates within the field, identifying areas of compatibility among sometimes competing approaches. Combining a broad scope with the more in-depth knowledge and sophisticated understanding needed to approach the primary literature, this text is the ideal introduction to the exciting and rapidly expanding study of human evolutionary psychology.
