Pandemic Exposures Fassin Didier, Marion Fourcade, 2021-11 An illuminating, indispensable analysis of a watershed moment and its possible aftermath. For people and governments around the world, the onset of the COVID-19 pandemic seemed to place the preservation of human life at odds with the pursuit of economic and social life. Yet this naive alternative belies the complexity of the entanglements the crisis has created and revealed not just between health and wealth but also around morality, knowledge, governance, culture, and everyday subsistence. Didier Fassin and Marion Fourcade have assembled an eminent team of scholars from across the social sciences to reflect on the myriad ways SARS-CoV-2 has entered, reshaped, or exacerbated existing trends and structures in every part of the globe. The contributors show how the disruptions caused by the pandemic have both hastened the rise of new social divisions and hardened old inequalities and dilemmas. An indispensable volume, *Pandemic Exposures* provides an illuminating analysis of this watershed moment and its possible aftermath.

The Horten Brothers and Their All-Wing Aircraft David Myhra, 1998 *The Horten Brothers and Their All-Wing Aircraft* is the heretofore untold true story of Reimar, Wolfram, and Walter Horten's remarkable aeronautical achievements with the all-wing planform between 1933 and 1945 as told to aviation biographer David Myhra. Talking daily with Reimar Horten at his ranch at the

foothills of the Andes Mountains in Argentina for two months, and also with Walter in Baden Baden, Germany, the two brothers described in detail their struggles in Nazi controlled Germany to perfect the all-wing planform. Astounding as their real-life story is of itself, the Horten brothers gave David Myhra hundreds of photographs to illustrate this new volume. In this remarkable book David Myhra tells the true story of the Horten brothers and their all-wing aircraft through the use of over 735 photos and three-view line drawings of their entire all-wing line. Most of these photos and drawings have not been available to the public until now. Even more astonishing, the Hortens, ridiculed in the mid-1930s for wasting their genius on silly all-wing aircraft, would be the only ones called on by Hermann Goring in December 1944 to build an all-wing Amerika atomic bomber and save Deutschland from certain and final destruction by the Allies through a negotiated peace settlement. The Horten Ho 18 Amerika Bomber was not meant to be. But it might have been if the war had not ended in May 1945 but, say, May 1946. This, then, is the fascinating true story of those naive boy-designers from Bonn, the Horten brothers and their silly all-wing airplanes. AUTHOR:

Exploring and Optimizing Agricultural Landscapes Lothar Mueller, Viktor G. Sychev, Nikolai M. Dronin, Frank Eulenstein, 2021-06-14 The book informs about agricultural landscapes, their features, functions and regulatory mechanisms. It characterizes agricultural production systems, trends of their

development, and their impacts on the landscape. Agricultural landscapes are multifunctional systems, coupled with all nexus problems of the 21th century. This has led to serious discrepancies between agriculture and environment, and between urban and rural population. The mission, key topics and methods of research in order to understanding, monitoring and controlling processes in rural landscapes is being explained. Studies of international expert teams, many of them from Russia, demonstrate approaches towards both improving agricultural productivity and sustainability, and enhancing ecosystem services of agricultural landscapes. Scientists of different disciplines, decision makers, farmers and further informed people dealing with the evolvement of thriving rural landscapes are the primary audience of this book.

The Nile Henri J. Dumont, 2009-05-06 What have we learnt about the Nile since the mid-1970s, the moment when Julian Rzoska decided that the time had come to publish a comprehensive volume about the biology, and the geological and cultural history of that great river? And what changes have meanwhile occurred in the basin? The human population has more than doubled, especially in Egypt, but also in East Africa. Locally, industrial development has taken place, and the Aswan High Dam was clearly not the last major infrastructure work that was carried out. More dams have been built, and some water diversions, like the Toshka lakes, have created new expanses of water in the middle of the Sahara desert. What are the effects of all this on the ecology and economy of the Basin? That is what the present book sets out to explore, 33 years after the publication of "The Nile: Biology of an Ancient River". Thirty-seven authors have taken up the challenge, and have written the "new" book. They come from 13 different countries, and 15 among them represent the

largest Nilotic states (Egypt, Sudan, Ethiopia, Uganda, and Kenya). Julian Rżóska died in 1984, and most of the – authors of his book have now either disappeared or retired from research. Only Jack Talling and Samir Ghabbour were still available to participate again.

Cairo collages Mona Abaza, 2020-02-28 With the military seizing overt power in Egypt, Cairo's grand and dramatic urban reshaping during and after 2011 is reflected upon under the lens of a smaller story narrating everyday interactions of a middle-class building in the neighbourhood of Doqi.

Advances in Research on Vegetable Production Under a Changing Climate Vol.

1 Shashank Shekhar Solankey, Meenakshi Kumari, Manoj Kumar, 2021-04-09 A considerable change in climate at a global level will impact the vegetable cultivation and agriculture as a whole; subsequently affecting the world's food supply. Climate change per se is not necessarily harmful; the problems arise from extreme events that are difficult to predict (erratic rainfall patterns and unpredictable high and low temperatures), and consequently reduce crop productivity. Vegetables are in general more succulent (have 90% water) and are more sensitive to climatic vagaries. Sudden changes in temperature coupled with irregular precipitation at any phase of crop growth can affect the normal growth, flowering, pollination, fruit setting, fruit development and fruit ripening can decrease the yield. The irregular precipitation can also affect the soil salinity and is a major challenge in many vegetable growing areas. To mitigate the harmful impact of climatic change there is a urgent need to develop adequate adaptation strategies for adverse effect of climate change and the preference should be given on development of heat, cold, drought, flood and salinity stress tolerant genotypes along with climate proofing through conventional and non-

conventional breeding techniques. Available evidence shows that there is a high probability of increase in the frequency and intensity of climate related natural hazards due to climate change and hence increases the potential threat due to climate change related natural disasters in the world. This book (Volume- I) will be basically useful for the researchers and postgraduate students with current challenges and mitigation strategies for increasing vegetable production under a changing climate.

Flying Saucer Aircraft Bill Rose, Tony Buttler, 2006 Though there has been much speculation on whether flying saucers and the aliens who allegedly favor such craft have any basis in reality, it is a fact that over the years a variety of experimental aircraft that could be described as flying saucer types have been developed in different countries right here on earth. Such aircraft have invariably been shrouded in secrecy, and this book finally presents a serious factual study of these mysterious designs. This book covers 20 flying saucer and similar aircraft projects in detail, including the Vought V-173 Pancake, the Boeing B390, the German AS-6 and Focke Wulf VTOL saucer, and others. It also covers NASA's research into lenticular lifting body designs, lunar ferry systems, exotic lightship concepts and recent laser propulsion experiments. All of the craft featured in this book are on the cutting edge of aviation research and will appeal greatly to those fascinated by flying saucers and their sinister or conspirational connections.

The Rise and Reign of the Mammals Steve Brusatte, 2022-06-07 New from the author of the acclaimed bestseller *The Rise and Fall of the Dinosaurs* ("A masterpiece of science writing." -Washington Post) and "one of the stars of

modern paleontology" (National Geographic), a sweeping and revelatory history of mammals, illuminating the lost story of the extraordinary family tree that led to us. National Bestseller • Top 10 Nonfiction of 2022: Kirkus • Best Science Books of 2022: The Times UK We humans are the inheritors of a dynasty that has reigned over the planet for nearly 66 million years, through fiery cataclysm and ice ages: the mammals. Our lineage includes saber-toothed tigers, woolly mammoths, armadillos the size of a car, cave bears three times the weight of a grizzly, clever scurriers that outlasted Tyrannosaurus rex, and even other types of humans, like Neanderthals. Indeed humankind and many of the beloved fellow mammals we share the planet with today—lions, whales, dogs—represent only the few survivors of a sprawling and astonishing family tree that has been pruned by time and mass extinctions. How did we get here? In his acclaimed bestseller *The Rise and Fall of the Dinosaurs*—hailed as “the ultimate dinosaur biography” by *Scientific American*—American paleontologist Steve Brusatte enchanted readers with his definitive history of the dinosaurs. Now, picking up the narrative in the ashes of the extinction event that doomed T-rex and its kind, Brusatte explores the remarkable story of the family of animals that inherited the Earth—mammals— and brilliantly reveals that their story is every bit as fascinating and complex as that of the dinosaurs. Beginning with the earliest days of our lineage some 325 million years ago, Brusatte charts how mammals survived the asteroid that claimed the dinosaurs and made the world their own, becoming the astonishingly diverse range of animals that dominate today’s Earth. Brusatte also brings alive the lost worlds mammals inhabited through time, from ice ages to volcanic catastrophes. Entwined in this story is the detective work he and other scientists have done to piece together our understanding using fossil clues

and cutting-edge technology. A sterling example of scientific storytelling by one of our finest young researchers, *The Rise and Reign of the Mammals* illustrates how this incredible history laid the foundation for today's world, for us, and our future.

Introduction to Arabic Natural Language Processing Nizar Y.

Habash, 2022-06-01 This book provides system developers and researchers in natural language processing and computational linguistics with the necessary background information for working with the Arabic language. The goal is to introduce Arabic linguistic phenomena and review the state-of-the-art in Arabic processing. The book discusses Arabic script, phonology, orthography, morphology, syntax and semantics, with a final chapter on machine translation issues. The chapter sizes correspond more or less to what is linguistically distinctive about Arabic, with morphology getting the lion's share, followed by Arabic script. No previous knowledge of Arabic is needed. This book is designed for computer scientists and linguists alike. The focus of the book is on Modern Standard Arabic; however, notes on practical issues related to Arabic dialects and languages written in the Arabic script are presented in different chapters. Table of Contents: What is Arabic? / Arabic Script / Arabic Phonology and Orthography / Arabic Morphology / Computational Morphology Tasks / Arabic Syntax / A Note on Arabic Semantics / A Note on Arabic and Machine Translation

Social and Political Foundations of Constitutions Denis James Galligan, Mila Versteeg, 2013 This volume analyses the social and political forces that influence constitutions and the process of constitution making. It combines theoretical perspectives on the social and political foundations of

constitutions with a range of detailed case studies of constitution making in nineteen different countries. In the first part of the volume, leading scholars analyse and develop a range of theoretical perspectives, including constitutions as coordination devices, mission statements, contracts, products of domestic power play, transnational documents, and as reflection of the will of the people. In the second part of the volume, these theories are examined through in-depth case studies of the social and political foundations of constitutions in countries such as Egypt, Nigeria, Japan, Romania, Bulgaria, New Zealand, Israel, Argentina, and others. The result is a multidimensional study of constitutions as social phenomena and their interaction with other social phenomena. The approach combines social science analysis of the nature of constitutions with case studies of selected constitutions--

Industrially Important Fungi for Sustainable Development Ahmed M. Abdel-Azeem, Ajar Nath Yadav, Neelam Yadav, Zeba Usmani, 2021-06-18 Fungi are an understudied, biotechnologically valuable group of organisms. Due to their immense range of habitats, and the consequent need to compete against a diverse array of other fungi, bacteria, and animals, fungi have developed numerous survival mechanisms. However, besides their major basic positive role in the cycling of minerals, organic matter and mobilizing insoluble nutrients, fungi have other beneficial impacts: they are considered good sources of food and active agents for a number of industrial processes involving fermentation mechanisms as in the bread, wine and beer industry. A number of fungi also produce biologically important metabolites such as enzymes, vitamins, antibiotics and several products of important pharmaceutical use; still others are involved in the production of single

cell proteins. The economic value of these marked positive activities has been estimated as approximating to trillions of US dollars. The unique attributes of fungi thus herald great promise for their application in biotechnology and industry. Since ancient Egyptians mentioned in their medical prescriptions how they can use green molds in curing wounds as the obvious historical uses of penicillin, fungi can be grown with relative ease, making production at scale viable. The search for fungal biodiversity, and the construction of a living fungi collection, both have incredible economic potential in locating organisms with novel industrial uses that will lead to novel products. Fungi have provided the world with penicillin, lovastatin, and other globally significant medicines, and they remain an untapped resource with enormous industrial potential. Volume 1 of Industrially Important Fungi for Sustainable Development provides an overview to understanding fungal diversity from diverse habitats and their industrial application for future sustainability. It encompasses current advanced knowledge of fungal communities and their potential biotechnological applications in industry and allied sectors. The book will be useful to scientists, researchers, and students of microbiology, biotechnology, agriculture, molecular biology, and environmental biology.

The New Political Islam Emmanuel Karagiannis, 2018-01-02 Islamist political parties and groups are on the rise throughout the Muslim world, constituting a new political Islam that is global in scope and yet local in action. Emmanuel Karagiannis explains how various Islamists have endorsed human rights, democracy, and justice to gain influence and mobilize supporters.

Plant and Human Health, Volume 2 Munir Ozturk, Khalid Rehman

Hakeem, 2019-01-22 Early anthropological evidence for plant use as medicine is 60,000 years old as reported from the Neanderthal grave in Iraq. The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East. Today, around 1.4 billion people in South Asia alone have no access to modern health care, and rely instead on traditional medicine to alleviate various symptoms. On a global basis, approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life-threatening conditions that include diabetes, hypertension and cancers. As the demand for plant-based medicine rises, there is an unmet need to investigate the quality, safety and efficacy of these herbals by the “scientific methods”. Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical, phytochemical, analytical, and molecular techniques. For instance, high throughput robotic screens have been developed by industry; it is now possible to carry out 50,000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors. This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions. However, drug development from natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high-throughput bioassays, and the scaling-up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant-based therapeutics. The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological

developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, It will focus on the secondary metabolic compounds which afford protection against diseases. Lastly, Volume 3 focuses on the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together this three-volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners, and students and researchers in botany and horticulture.
