Remanent Life Prediction PEP (Professional Engineering Publishers),1998-03-13 The need to repair or replace structural components can lead to considerable expense if the plant has to be taken out of service whilst these operations are carried out. This text discusses methodologies which accurately and safely predict the remaining life of components.

The Safety of Nuclear Power Plants ,1988

The Change Laboratory Jaakko Virkkunen,2013-12-31 A new challenge of learning in work organizations--both in business and public administration--is to master entire life cycles of product, production and business concepts. Meeting this challenge calls--at all levels of the organization--for learning that expand the learners' horizon and practical mastery from individual tasks up to the level of the whole system of the collective activity and its transformation. The Change Laboratory is a method for formative intervention in work communities that supports this kind of organizational learning. It is a path breaker in the area of work place learning due to its strong theoretical and research basis and the way that it integrates the change of organizational practices and individuals' learning. It provides a way to develop practitioners' transformative agency and capacity for creating and implementing new conceptual and practical tools for mastering their joint activity. This first comprehensive presentation of the already widely used method is written for researchers, consultants, agricultural extension and HRD professionals, as well as practitioners involved in developing activities in their professional field. It explains this novel method as well as its theoretical basis on the Cultural Historical Activity Theory providing also practical examples and tools for carrying out a Change Laboratory intervention. A review is also provided of studies concerning various aspects of expansive learning processes in Change Laboratory interventions.

Just Culture Sidney Dekker,2012 While many organizations see the value of creating a just culture they struggle when it comes to developing it. In this Second Edition, Dekker expands his views, additionally tackling the key issue of how justice is created inside organizations. Dekker also introduces new material on ethics and on caring for the 'second victim' (the professional at the centre of the incident). Consequently, we have a natural evolution of the author's ideas.

Shouldering Risks Constance Perin,2006-10-22 At the world's some 440 nuclear power plants, experts continually monitor their wide safety margins, and at signs of trouble seek out the sources and recommend changes. Too often for their comfort, and for ours, a subsequent problem reveals that these changes were ineffective or never made. Why this self-defeating pattern? What in this technology's culture of control might undermine experts' best intentions? What kind of problem is it to reduce operating risks? Following brief highlights of this industry's history over the last twenty years of accidents, near-accidents, and institutional changes, *Shouldering Risks* presents excerpts from interviews with some sixty experts about four relatively recent events at three U.S. plants. Drawing also on her earlier field studies at eleven plants in America and abroad, on industry documents, and others' research, Constance Perin identifies unacknowledged elements in this industry's culture of control; for example, control concepts for reactor design, construction, and regulation carry over to risk handling and event analysis, whose efficacy depends instead on recognizing and interpreting the significance of technical and contextual signals on daily display. Far more than the sum of its parts, this highly knowledge-dependent technology operates along an axis of meanings, not only along an axis of functions. A culture of control is, like any culture, an intricate system of claims about how to understand the world and act in it. Here, claims pivot around the dynamics of control theory and productivity based on particular assumptions about the relationships of humans to machines, models to reality, certainty to ambiguity, rationality to experience. These four events and accident analyses show that such assumptions can confound control and produce misleading meanings. *Shouldering Risks* reimagines a broader and deeper culture of control to reshape our understandings of the intellectual capital appropriate to designing, regulating, organizing, and managing this risky enterprise and, perhaps, other such technologies already here or to come.

Reactor Safety Research Wolfgang Krischer,1990

The System of Systems Rebecca Glyn-Blanco,Maria McLintock,Danae Papazymouri,Alice Primrose,2017 The publication interrogates how political powers in Europe are using technologies, from data collection to private companies, in bureaucratic systems which determine the fate of asylum seekers. Bringing together artists, designers, architects, academics, activists and practitioners, working across a range of mediums, the publication responds to the complex and knotty legal framework which individuals seeking asylum are forced to navigate, or, in many cases, elude.--
