Tapping State Government Information Sources Lori L. Smith,Daniel C. Barkley,Daniel D. Cornwall,Eric W. Johnson,J. Louise Malcomb,2003-11-30 Each state government produces large varieties and quantities of useful information that are largely unknown outside their state of origin. This book leads the public to the most useful information sources produced by each state, as well as to depository libraries that will facilitate more effective research. For each of the 50 states, important publications are detailed, along with information on how to obtain them. The publications' topics range from crime statistics to vital statistics, business statistics, health information, statistical abstracts, education directories, state budgets, economic indicators, state laws and legal information, and more. Tapping State Government Information Sources has a broader focus than previously published books in this subject area, most of which have focused solely on depository laws, useful state publications, or indexes to state publications. This book covers all three. The first chapter describes print and electronic sources that provide information about all 50 states. Each state's resources are then described in individual chapters. When possible, information about how to order a copy of the source is given, as are Web addresses for titles that are available online. At the beginning of each state chapter, the state's legal definition of public document or its equivalent is given, which may be of interest to librarians in states that are reexamining their own depository laws.

State Assessment Policy and Practice for English Language Learners Charlene Rivera,Eric Collum,2014-05-12 State Assessment Policy and Practice for English Language Learners presents three significant studies, each examining a different aspect of states' strategies for including English language learners in state assessments. *an Analysis of State Assessment Policies Regarding Accommodations for English Language Learners; *a Survey and Description of Test Translation Practices; and *an Examination of State Practices for Reporting Participation and Performance of English Language Learners in State Assessments. With the rise in population of English language learners and the subsequent stepped-up legislative focus on this student population over the past decade, states have been challenged to include English language learners in state assessment programs. Until now, the little data available on states' policies and practices for meeting this challenge has been embedded in various reports and professional journals and scattered across the Internet. This volume offers, for the first time, a focused examination of states' assessment policies and practices regarding English language learners. The three studies were supported by OELA, the U.S. Department of Education's Office of English Language Acquisition, Language Enhancement, and Academic Achievement for Limited English Proficient Students. State Assessment Policy and Practice for English Language Learners is of interest to researchers and professionals involved with

the assessment of English language learners; state- and district-level policy makers; and academics, teacher educators, and graduate students in a number of fields, including educational and psychological assessment, testing and measurement, bilingual education, English as a second language, and second language acquisition.

Mortality and Its Risk Factors Among Professional Athletes Jeffrey S. Markowitz, 2018-03-27 This eye-opening study adds to the scarce scholarly literature on professional athletes, bringing empirical rigor to issues often clouded by mystery and hearsay. It identifies socioeconomic, demographic, and career variables as risk factors for mortality among former NBA and NFL players, along with hypotheses to be tested relating to elite athletes and other U.S. populations. A detailed multivariate analysis compares mortality factors, rates, and outcomes within and between the two leagues, comparing them also with the general U.S. male population. The findings and conclusions gleaned from this research offer possibilities for future research to improve health and quality of life in this specific athlete cohort, among athletes in general, in other groups, and in the larger society. Potential risk factors analyzed in this groundbreaking study: · Race · Body Mass Index (BMI) · U.S. birthplace region (Northeast, West, Midwest, South) · Years of playing experience · Playing position Mortality and Its Risk Factors among Professional Athletes will spark interest among professionals and researchers in public health, sports medicine, and epidemiology; current and former NBA and NFL players, their families, coaches, trainers, and union

representatives; non-professional basketball and football players, athletes from other sports, and their families, coaches, and trainers; social scientists; policymakers; obesity researchers; parents of children who play contact sports; students, teachers, and researchers in occupational health and racial disparities; and health care providers.

Spinal Cord Injury Institute of Medicine, Board on Neuroscience and Behavioral Health, Committee on Spinal Cord Injury, 2005-08-27 An estimated 11,000 spinal cord injuries occur each year in the United States and more than 200,000 Americans suffer from maladies associated with spinal cord injury. This includes paralysis, bowel and bladder dysfunction, sexual dysfunction, respiratory impairment, temperature regulation problems, and chronic pain. During the last two decades, longstanding beliefs about the inability of the adult central nervous system to heal itself have been eroded by the flood of new information from research in the neurosciences and related fields. However, there are still no cures and the challenge of restoring function in the wake of spinal cord injuries remains extremely complex. Spinal Cord Injury examines the future directions for research with the goal to accelerate the development of cures for spinal cord injuries. While many of the recommendations are framed within the context of the specific needs articulated by the New York Spinal Cord Injury Research Board, the Institute of Medicine's panel of experts looked very broadly at research priorities relating to future directions for the field in general and make

recommendations to strengthen and coordinate the existing infrastructure. Funders at federal and state agencies, academic organizations, pharmaceutical and device companies, and non-profit organizations will all find this book to be an essential resource as they examine their opportunities.
