Severe Thunderstorms and Tornadoes in the United States Peter Folger, 2011-04-10 Severe thunderstorms and tornadoes affect communities across the U.S. every year, causing fatalities, destroying property and crops, and disrupting businesses. Tornadoes are the most destructive products of severe thunderstorms. Damages from violent tornadoes seem to be increasing, similar to the trend for other natural hazards in part due to changing population, demographics, and more weather-sensitive infrastructure and some analysts indicate that losses of \$1 billion or more from single tornado events are becoming more frequent. Insurance industry analysts state that tornadoes, severe thunderstorms, and related weather events have caused nearly 57%, on average, of all insured catastrophe losses in the U.S. in any given year since 1953. Contents of this report: (1) Overview; (2) Issues for Congress: A Focus on Local Warnings and Forecasts for the National Weather Service; Mitigation: The National Windstorm Impact Reduction Program; Reauthorizing the National Windstorm Impact Reduction Program; Climate Change and Severe Weather: The April and May 2011 Tornadoes: A Link to Climate Change?; Other Factors Contributing to Risk From Tornadoes; Forecasting and Warning: The Role of the National Weather Service; Summary and Conclusions; Appendix: Risk from Severe Thunderstorms and Tornadoes. Map and tables. This is a print on demand report.

Tornadoes Michael Woods, Mary B. Woods, 2008 With dramatic images and first-hand survivor stories - plus the latest facts and figures - this series takes you up close with the world's most devastating disasters. Each book covers a disaster from both the scientific and human side, capturing the impact and emotion through primary source quotations and photographs.

Tornado Hunter Stefan Bechtel, Tim Samaras, 2009 METEOROLOGY. With climate change and global warming creating more frequent and more violent storms, there is a huge readership for weather disasters such as hurricanes and tornadoes. This book will appeal to the audience for the bestseller *Perfect Storm*. This page-turning story of tornado chaser and National Geographic grantee Tim Samaras opens with a chilling, play-by-play description of the F5 tornado that wiped off the map the town of Manchester, North Dakota, on June 24, 2003. Stefan Bechtel, author of the acclaimed *Roar of the Heavens* teams with Samaras to reveal the heart and people of the town, the terror of the descending funnel, Samaras' fearless chase to the tornado's core, and the ingenious equipment he masterminded to record the inner workings of a tornado - to aid in future detection, avoidance, and destruction.

Scanning the Skies Marlene Bradford, 2001 Tornadoes, nature's most violent and unpredictable storms, descend from the clouds nearly one thousand times yearly and have claimed eighteen thousand American lives since 1880. However, the U.S. Weather Bureau--fearing public panic and believing tornadoes were too fleeting for meteorologists to predict--forbade the use of the word tornado in forecasts until 1938. *Scanning the Skies* traces the history of today's tornado warning system, a unique program that integrates federal, state, and local governments, privately controlled broadcast media, and individuals. Bradford examines the ways in which the tornado warning system has grown from meager beginnings into a program that protects millions of Americans each year. Although no tornado forecasting program existed before WWII, the needs of the military prompted the development of a severe weather warning system in tornado prone areas. Bradford traces the post-war creation of the Air Force centralized tornado forecasting program and its civilian counterpart at the Weather Bureau. Improvements in communication, especially the increasing popularity of television, allowed the Bureau to expand its warning system further. This book highlights the modern tornado watch system and explains how advancements

during the latter half of the twentieth-century--such as computerized data collection and processing systems, Doppler radar, state-of-the-art television weather centers, and an extensive public education program--have resulted in the drastic reduction of tornado fatalities.

Storm Warning Nancy Mathis,2007-03-06 The Perfect Storm on the prairie, Storm Warning is a compulsively readable account of one of the most terrible tornadoes in history -- and the extraordinary people who kept it from becoming the deadliest. May 3, 1999, is a day that Oklahomans will never forget. By the time the sun set over a ravaged plain, some 71 tornadoes had claimed 11,000 homes and businesses and caused a billion dollars in damages. One of them was a mile-wide monster of incredible power, the fiercest F5 twister to hit a metropolitan area, and whose 300 mph winds were the fastest ever recorded on the planet. Veteran journalist Nancy Mathis draws on numerous interviews to weave the story of those few terrifying hours that irrevocably changed the lives of many Oklahomans. Storm Warning features Kara Wiese, who fought to save her son from the fatal winds, and Charlie Cusack, who followed the tornado's progress on television until it came knocking on his front door. Amazingly, only thirty-eight people perished at the hands of the Oklahoma F5. Many lives were saved by the efforts of professionals such as Ted Fujita, the creator of the Fujita Scale (dubbed Mr. Tornado for his relentless pursuit to unravel a twister's mysteries); the oft-criticized but dogged government meteorologists; and Gary England, a resourceful TV weatherman whose tireless efforts prepared hundreds of people in the tornado's path. Storm Warning alternates between personal stories and the history of the struggle to understand this bewildering force of Mother Nature, creating a nail-biting, captivating look at surviving the fury from the skies.

Insultingly Stupid Movie Physics Tom Rogers,2007-11-01 In this fascinating and humorous guide, author Tom Rogers examines the real science behind stunts, plots, and special effects without ruining the fun of your favorite, universe-breaking action movies. Building on the work of the Insultingly Stupid Movie Physics website (<http://www.intuitor.com/moviephysics/>), this book questions classic 80s and 90s movies on 20 different topics, including: Can you ignite gasoline with the flick of a cigarette? What would shrinking the kids actually require? Would an explosion in space look like a scene from Star Wars? An informative romp through classic movies, Insultingly Stupid Movie Physics reveals the basic laws of physics and how Hollywood breaks them all—perfect for armchair Einsteins, movie buffs, or engaging lessons in the science classroom.

Tornadoes Michael Woods, Mary B. Woods, 2007-01-01 Imagine a twisting cone of wind racing toward your house at speeds of up to 300 miles per hour. As it approaches, trees, cars, and even cows are lifted into a funnel cloud and bricks, glass, and wood are flung out in all directions. You're seeing a tornado the smallest and strongest storm on earth. A tornado can be a catastrophe for people and their property. But twisters are also one of the most fascinating forces of nature. With dramatic images and firsthand survivor stories plus the latest facts and figures this book takes you up close with tornado disasters.

Natural Hazards Edward A. Keller, Duane E. DeVecchio, 2019-03-29 The new revised fifth edition of Natural Hazards remains the go-to introductory-level survey intended for university and college courses that are concerned with earth processes that have direct, and often sudden and violent, impacts on human society. The text integrates principles of geology, hydrology, meteorology, climatology, oceanography, soil science, ecology, and solar system astronomy. The textbook explains the earth processes that drive hazardous events in an understandable way, illustrates how these processes interact with our civilization, and describes how we can better adjust to their effects. Written by leading scholars in the area, the new edition of this book takes advantage of the greatly expanding amount of information regarding natural hazards, disasters, and catastrophes. The text is designed for learning, with chapters broken into small consumable chunks of content for students. Each chapter opens with a list of learning objectives and ends with revision as well as high-level critical thinking questions. A Concepts in Review feature provides an innovative end-of-chapter section that breaks down the chapter content by parts: reviewing the learning objectives, summary points, important visuals, and key terms. New case studies of hazardous events have been integrated into the text, and students are invited to actively apply their understanding of the five fundamental concepts that serve as a conceptual framework for the text. Figures, illustrations, and photos have been updated throughout. The book is designed for a course in natural hazards for nonscience majors, and a primary goal of the text is to assist instructors in guiding students who may have little background in science to understand physical earth processes as natural hazards and their consequences to society.
