Facing Global Environmental Change Hans Günter Brauch, Navnita Chadha Behera, Patricia Kameri-Mbote, John Grin, Úrsula Oswald Spring, Béchir Chourou, Czesław Mesjasz, Heinz Krummenacher, 2009-06-04 The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media. This was the result not only of a heightened interest on the part of the public on various aspects of climate change, but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US, Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change, and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

Principles and Practice of Public Health

Surveillance Lisa M. Lee PhD, Steven M. Teutsch MD, MPH, Stephen B. Thacker MD, MSc, Michael E. St. Louis MD, 2010-08-26 Public health surveillance is the systematic, ongoing assessment of the health of a community, based on the collection, interpretation, and use of health data. Surveillance provides information necessary for public health decision making and interventions. In the third edition of *Principles and Practice of Public Health Surveillance*, the editors present an organized approach to planning, developing, and implementing public health surveillance systems in response to the rapidly changing field of public health. Substantially revised and expanded on, this edition continues to examine further the expansion of surveillance of disease and health determinants, as well as the recent advances in data management and informatics. Major sections of the book focus on bioresponse and preparedness, risk behaviors, and environmental exposure, while the ethical considerations and policy justification for public health surveillance are also explored. Drawing largely from the experience of the Centers for Disease Control and Prevention and other

experts in the field, this book provides an excellent framework that collectively improves the surveillance foundation of public health. It will continue to serve as the standard text in the field, an invaluable resource for public health students and the desk reference for public health practitioners.

World Heritage, Tourism and Identity Laurent

Bourdeau, Maria Gravari-Barbas, 2016-03-09 The remarkable success of the 1972 UNESCO Convention Concerning the Protection of World Cultural and Natural Heritage is borne out by the fact that nearly 1,000 properties have now been designated as possessing Outstanding Universal Value and recognition given to the imperative for their protection. However, the remarkable success of the Convention is not without its challenges and a key issue for many Sites relates to the touristic legacies of inscription. For many sites inscription on the World Heritage List acts as a promotional device and the management challenge is one of protection, conservation and dealing with increased numbers of tourists. For other sites, designation has not brought anticipated expansion in tourist numbers and associated investments. What is clear is that tourism is now a central concern to the wide array of stakeholders involved with World Heritage Sites.
