*The Year-Round Hoophouse* Pam Dawling,2018-11-13 Design and build a hoophouse or polytunnel, and grow abundant produce year-round in any climate The Year-Round Hoophouse is the comprehensive guide to designing and building a hoophouse and making a success of growing abundant, delicious fresh produce all year, whatever your climate and land size. Chapters include: Hoophouse siting, size, style, frame construction, and tools Bed layout, soil, crop rotations, and extensive coverage of various crops for all seasons Organic solutions to pests and diseases Disaster preparation Tested resources for each chapter. The Year-Round Hoophouse is ideal for farmers who wish to move into protected growing, as well as beginning farmers in rural and urban spaces. It is an essential reference resource for professors and students of courses in sustainable agriculture, as well as interns and apprentices learning on the job. Growing in hoophouses - also known as high tunnels or polytunnels - reduces the impact of an increasingly unpredictable climate on crops, mitigates soil erosion, extends the growing season, keeps leafy greens alive through the winter, and enables growers to supply more regional food needs.

**Verified Software: Theories, Tools, Experiments** Natarajan Shankar,Jim Woodcock,2008-09-26 This volume contains the proceedings of the second working conference on Verified Software: Theories, Tools, and Experiments, VSTTE 2008, held in Toronto, Canada, in October 2008. The 16 papers presented together with 4 invited talks were carefully revised and selected for inclusion in the book. This second conference formally inaugurates the Verified Software Initiative (VSI), a fifteen-year, co-operative, international project directed at the scientific challenges of large-scale software verification. The scope of the cooperative effort includes the sharing and interoperability of tools, the alignment of theory and practice, the identification of challenge problems, the construction of benchmark suites, and the execution of large-scale experiments.

*Neoliberal Chicago* Euan Hague,2016-12-12 The neoliberal philosophy of fiscal austerity aligned with reduced regulation has transformed Chicago. As pursued by mayor Rahm Emanuel and his predecessor Richard M. Daley, neoliberalism led officials to privatize everything from parking meters to schools, gut regulations and social services, and promote gentrification wherever possible. The essayists in Neoliberal Chicago explore an essential question: how does neoliberalism work on the ground in today's Chicago? Contextual chapters explore race relations, physical development, and why Chicago embraced neoliberalism. Other contributors delve into aspects of the neoliberal vision, neoliberalism's impact on three iconic city spaces, and how events like the 2008 foreclosure crisis and the bid to attract the Olympic Games reveal the workings of neoliberalism. Contributors: Stephen Alexander, Larry Bennett, Michael Bennett, Carrie Breitbach, Sean Dinges, Kenneth Fidel, Roberta Garner, Euan Hague, Black Hawk Hancock, Christopher Lamberti, Michael J. Lorr, Martha Martinez, Brendan McQuade, Alex G. Papadopoulos, Rajiv Shah, Costas Spirou, Carolina Sternberg, and Yue Zhang.

Validation of Exceptional Longevity Bernard Jeune,1999 While not quite on a par with Mel Brooks' 2,000 Year-Old Man, this volume reports on some folks who've been around for a long time. Contributors to 15 papers indicate that such longevity rarely existed prior to the 19th century. Appends statistical data on predicting age distribution, and documentation of a family's exceptional longevity. Lacks an index. Distributed in the US by ISBS. **Biometrics** Julian Ashbourn,2000 Accompanying CD-ROM has biometric software developed by the author, who was one of the pioneers in integrating biometric technology.

**Biometric Specifications for Personal Identity Verification** nist,2013-12-12 Homeland Security Presidential Directive HSPD-12, Policy for a Common Identification Standard for Federal Employees and Contractors [HSPD-12], called for new standards to be adopted governing interoperable use of identity credentials to allow physical and logical access to Federal government locations and systems. The Personal Identity Verification (PIV) standard for Federal Employees and Contractors, Federal Information Processing Standard Personal Identity Verification (PIV) of Federal Employees and Contractors (FIPS 201), was developed to define procedures and specifications for issuance and use of an interoperable identity credential. This document, Special Publication 800-76 (SP 800-76), is a companion document to FIPS 201. It describes technical acquisition and formatting specifications for the PIV system, including the PIV Card itself. It also establishes minimum accuracy specifications for deployed biometric authentication processes. The approach is to enumerate procedures and formats for collection and preparation of fingerprint, iris and facial data, and to restrict values and practices included generically in published biometric standards. The primary design objective behind these particular specifications is to enable high performance and universal interoperability. The introduction of iris and face specifications into the current edition adds alternative modalities for biometric authentication and extends coverage to persons for whom fingerprinting is problematic. The addition of oncard comparison offers an alternative to PIN-mediated card activation as well as an additional authentication method.

The Science of Biometrics Ravindra Das,2018-07-04 The Science of Biometrics: Security Technology for Identity Verification covers the technical aspects of iris and facial recognition, focusing primarily on the mathematical and statistical algorithms that run the verification and identification processes in these two modalities. Each chapter begins with a review of the technologies, examining how they work, their advantages and disadvantages, as well as some of their established market applications. Numerous approaches are examined. Facial recognition is much more of an emerging biometric technology than iris recognition; therefore, there are more algorithms that are currently being developed in that area. After this review, numerous applications of these two modalities are covered as well, some of which have just been commercially deployed while others are under research and development. Chapters 3 and 4 conclude with case studies to provide further application review. This book is directed to security managers, electronic security system designers, consultants, and system integrators, as well as electronic security system manufacturers working in access control and biometrics.

**Hardware Security Training, Hands-on!** Mark Tehranipoor,N. Nalla Anandakumar,Farimah Farahmandi,2023-06-29 This is the first book dedicated to hands-on hardware security training. It includes a number of modules to demonstrate attacks on hardware devices and to assess the efficacy of the countermeasure techniques. This book aims to provide a holistic hands-on training to upper-level undergraduate engineering students, graduate students, security researchers, practitioners, and industry professionals, including design engineers, security engineers, system architects, and chief security officers. All the hands-on experiments presented in this book can be implemented on readily available Field Programmable Gate Array (FPGA) development boards, making it easy for academic and industry professionals to replicate the modules at low cost. This book enables readers to gain experiences on side-channel attacks, fault-injection attacks, optical probing attack, PUF, TRNGs, odometer, hardware Trojan insertion and detection, logic locking insertion and assessment, and more.

**Biometric Technologies and Verification Systems** John R. Vacca,2007-03-16 Biometric Technologies and Verification Systems is organized into nine parts composed of 30 chapters, including an extensive glossary of biometric terms and acronyms. It discusses the current state-of-the-art in

biometric verification/authentication, identification and system design principles. It also provides a step-by-step discussion of how biometrics works; how biometric data in human beings can be collected and analyzed in a number of ways; how biometrics are currently being used as a method of personal identification in which people are recognized by their own unique corporal or behavioral characteristics; and how to create detailed menus for designing a biometric verification system. Only biometrics verification/authentication is based on the identification of an intrinsic part of a human being. Tokens, such as smart cards, magnetic stripe cards, and physical keys can be lost, stolen, or duplicated. Passwords can be forgotten, shared, or unintentionally observed by a third party. Forgotten passwords and lost smart cards are a nuisance for users and an expensive time-waster for system administrators. Biometric security solutions offer some unique advantages for identifying and verifying/authenticating human beings over more traditional security methods. This book will serve to identify the various security applications biometrics can play a highly secure and specific role in. \* Contains elements such as Sidebars, Tips, Notes and URL links \* Heavily illustrated with over 150 illustrations, screen captures, and photographs \* Details the various biometric technologies and how they work while providing a discussion of the economics, privacy issues and challenges of implementing biometric security solutions

The conference combines the sixth IBM Verification Workshop, the fourth IBM Software Testing Workshop, and the third PADTAD (Parallel and Distributed Systems: Testing and Debugging) Workshop. The 14 revised full papers presented together with three invited contributions were carefully reviewed and selected from 31 submissions. The papers address all current issues in hardware/software verification, software testing, and testing of parallel and concurrent applications.

**Computer Aided Verification** David L. Dill,1994 This volume contains the proceedings of the 6th Conference on Computer Aided Verification, held at Stanford University in June 1994. In total 37 included papers were selected in a highly competitive reviewing process from 121 submissions; in total they document many of the most important advances achieved in CAV research and applications since the predecessor conference held in June 1993. The volume is organized in sections on Real-Time Systems, CAV Theory, CAV Applications, Symbolic Verification, Hybrid Systems, Model Checking, Improving Efficiency, and Hardware Verification.--PUBLISHER'S WEBSITE.
