*Guideline for Building Services Design Inspired by the Cradle to Cradle Concept* Johannes Stiglmaier, Karsten Jurkait, 2020-01-31 The Cradle to Cradle (C2C) concept is a biomimetic approach that models human industry on nature's processes, viewing materials as nutrients circulating in healthy and safe metabolisms. It seeks to create systems that are not only efficient but also essentially waste free. A growing number of building owners and developers are looking to implement it in their buildings, be it to increase the productivity of their workforce, or to provide a differentiator. The C2C concept is reasonably covered in building construction; however, it is a rather uncharted area in building services, making it difficult for MEP engineers to develop C2C-inspired designs. Arup set out to bridge this gap, establishing how C2C-inspired design would look like in the different MEP disciplines, and researching which systems, products and materials are available in the market to meet the corresponding criteria. The result is a comprehensive guideline that enables MEP engineers to develop a C2C-inspired design. It covers design criteria, system selection, system sizing, design for deconstruction, as well as material and product selection for the main MEP disciplines, and sets out a number of criteria by which the aptness of a design for C2C can be measured.

Macroeconomics William Scarth, 2014-01-31 This important textbook offers a comprehensive look into the two main traditions in contemporary macroeconomics \_ New Classical and Keynesian \_ and examines the work of economists who have drawn on principles from both traditions to form a new, integr

*Towards Auctioning* Stefan Weishaar, 2009-01-01 Emissions trading systems have come to the fore as the most economically efficient mechanisms that can be employed to bring about an optimal greenhouse gas reduction goal. Even though much has been written about the advantages and disadvantages of these systems, one element of crucial importance and emission allowance allocation and has not been considered in adequate depth until the present study. Such an analysis takes on increased importance as it seems likely that market-based auctioning will become the default allocation method throughout the EU under a proposed amendment to the Emissions Trading System (ETS) established by Directive 2003/87/EC. Taking a law and economics approach and that is, using a combined perspective of industrial economics and legal analysis and this important book examines the potential for anticompetitive distortion that may result from auctioning emission allowances. Among the issues investigated in depth are the following: whether the current setup of the EU ETS fosters allocative efficiency or whether this allocative efficiency is hindered by legal impediments or constraints; whether EU competition law can serve to remedy anticompetitive effects stemming from Member State actions taken pursuant to Directive 2003/87/EC; which allocation formats are most desirable from an allocative efficiency and environmental effectiveness point of view; the importance of initial allocation and adjustment of out-of-equilibrium situations under the amended ETS; whether auctioning allowances serves the attainment of market equilibrium even in the continuing presence of and polluter havens and; the effect of the ECJ and its so-called and joint application jurisprudence and on the ETS; and the allocation of allowances from a state aid perspective. The book provides both a coherent typology of emission allowance allocation mechanisms and the main characteristics of the present emissions trading system, setting the gained insights into a broader perspective. It examines how various assignment mechanisms deal with issues such as price determination, allocative efficiency and environmental effectiveness. It considers how market-based allocation mechanisms compare with administrative allocation mechanisms, particularly those based on the widely applied grandfathering method. And perhaps most important and and of especial value to practitioners and policymakers and it identifies the auction design challenges that must be addressed by the Commission in its implementing regulation due by 30 June 2010.

**Climate Change and European Emissions Trading** Michael G. Faure, Marjan Peeters, 2008 A collection of twelve superbly written

contributions by leading researchers and scientists on greenhouse gas emissions trading by members of the European Union, as well as alternatives and new developments in this specialized area of global warming and reduction related commercial exchange. . . a seminal and strongly recommended work of particular relevance and value for both academic and governmental reference library collections on international environmental studies. Midwest Book Review This timely book focuses on the EU-wide greenhouse gas emissions trading scheme for major sources. It combines legal and economic approaches and reviews the major revision of this scheme. A distinguished range of authors assess the experiences thus far and also consider future development from both theoretical and practical perspectives. They also discuss many design options, including auctioning, credit and trade, the inclusion of aviation emissions, and linking possibilities. Moreover, attention is paid to the role of legal principles, the role of case law, and to aspects of democratic accountability within an emissions trading scheme. Ways to avoid carbon leakage and the role of national climate policies are also discussed. This book makes clear that the economic efficiency and effectiveness of an emissions trading scheme depend to a large extent on the specific legislative choices, and hence the legislative design of such a scheme deserves meticulous attention. Discussing legal and economic aspects of emissions trading, this book offers new insights to academics and policy makers both in the public and private sector. Those insights are not only relevant for understanding the past, but moreover for guiding the future design of emissions trading for greenhouse gases.

**After the Berlin Wall** Christopher Hilton, 2011-11-30 On 7 May 1945, Grand Admiral Donitz, named in Hitler's will as head of state, authorised the unconditional surrender of all German forces to the Allies on the following day. World War II in Europe was at an end. But many of the German people would continue to endure hardships, as both the country and the capital were to be divided between France, the UK and the USA in the west and the USSR in the east. East and West Germany, and East and West Berlin, would remain divided until 1989. By October 1990, however, the two countries were reunited, and the Berlin Reichstag was once again the seat of government. Here, politicians would put East and West back together again, marrying a totalitarian, atheist, communist system with a democratic, Christian, capitalist one. How did this marriage affect the everyday life of ordinary Germans? How did combining two telephone systems, two postal services, hospitals, farm land, property, industry, railways and roads work? How were women's rights, welfare, pensions, trades unions, arts, rents and housing affected? There had been no warning of this marriage and no preparation for it - and no country had ever tried putting two completely opposite systems together before. This is the story of what happened, in the words of the people it happened to - the people's story of an incredible unification.

**Challenges in Central Banking** Pierre L. Siklos, Martin T. Bohl, Mark E. Wohar, 2010-04-12 Changes in the field of central banking over the past two decades have been nothing short of dramatic. They include the importance of central bank autonomy, the desirability of low and stable inflation, and the vital role played by how central banks communicate their views and intentions to the markets and the public more generally. There remains considerable diversity nevertheless in the institutional framework affecting central banks, the manner in which the stance of monetary policy is determined and assessed, and the forces that dictate the conduct of monetary policy more generally. The global financial crisis, which began in the United States in 2007, only serves to highlight further the importance of central bank policies. The aim of this volume is to take stock of where we are in the realm of the practice of central banking and considers some of the implications arising from the ongoing crisis.

**Markenkommunikation mit Sport** Stephanie Caroline Kiendl, 2007-11-13 Stephanie C. Kiendl führt die Entscheidungsparameter bei den zahlreichen Kombinationsmöglichkeiten zwischen Sponsoring und Markenevents sowie deren Vernetzung mit der integrierten Markenkommunikation auf. Sie entwickelt daraus ein anwendungsorientiertes Planungsmodell für die Markenkommunikation im Sportbereich.

*Regards croisés sur le patrimoine dans le monde à l'aube du XXIe siècle* Maria Gravari-Barbas, Sylvie Guichard-Anguis, 2003 Un ensemble de

réflexions et de témoignages sur la diversité des pratiques en matière de prise en compte du patrimoine dans les différentes aires géographiques et culturelles. **Modelling and simulation of low-temperature district heating systems for the development of an exergy-based assessment method.**

Anna Marie Dagmar Kallert, 2019-03-01 Low temperature district heating (LTDH) offers possibilities for efficient heat supply based on renewable energies. For the analysis of LTDH, the exergetic assessment is a suitable method. Hence, an exergy-based assessment method was developed in which energy as well as economic and sustainability aspects are combined. As part of a technology comparison, the method is applied to case studies to verify the applicability of the assessment approach. The approach highlights innovative supply solutions by identifying the advantages and disadvantages of different supply strategies.

*What to Expect When No One's Expecting* Jonathan V. Last, 2014-06-10 Look around you and think for a minute: Is America too crowded? For years, we have been warned about the looming danger of overpopulation: people jostling for space on a planet that's busting at the seams and running out of oil and food and land and everything else. It's all bunk. The "population bomb" never exploded. Instead, statistics from around the world make clear that since the 1970s, we've been facing exactly the opposite problem: people are having too few babies. Population growth has been slowing for two generations. The world's population will peak, and then begin shrinking, within the next fifty years. In some countries, it's already started. Japan, for instance, will be half its current size by the end of the century. In Italy, there are already more deaths than births every year. China's One-Child Policy has left that country without enough women to marry its men, not enough young people to support the country's elderly, and an impending population contraction that has the ruling class terrified. And all of this is coming to America, too. In fact, it's already here. Middle-class Americans have their own, informal one-child policy these days. And an alarming number of upscale professionals don't even go that far—they have dogs, not kids. In fact, if it weren't for the wave of immigration we experienced over the last thirty years, the United States would be on the verge of shrinking, too. What happened? Everything about modern life—from Bugaboo strollers to insane college tuition to government regulations—has pushed Americans in a single direction, making it harder to have children. And making the people who do still want to have children feel like second-class citizens. *What to Expect When No One's Expecting* explains why the population implosion happened and how it is remaking culture, the economy, and politics both at home and around the world. Because if America wants to continue to lead the world, we need to have more babies.

**Hydrogen in Automotive Engineering** Manfred Klell, Helmut Eichlseder, Alexander Trattner, 2022-09-21 „Wasserstoff in der Fahrzeugtechnik“ bietet einen allgemeinen Überblick über die verschiedenen Aspekte von Eigenschaften, Erzeugung, Speicherung und Anwendung von Wasserstoff. Schwerpunkte liegen auf der Thermodynamik der Speicherung von Wasserstoff sowie auf der Anwendung in der Fahrzeugtechnik und in der Energietechnik. Mit Bezug zu Forschungsvorhaben an der TU Graz und dem HyCentA wird der aktuelle Stand der Technik fundiert dargestellt. Als eigener Abschnitt wurde in dieser Auflage die Brennstoffzelle zur Stromerzeugung für Elektroantriebe ergänzt. Ein Verfahren zur Wasserstoffproduktion durch Pyrolyse aus Glycerin wurde neu aufgenommen. Ergänzt wurden Abschnitte über aktuelle Anwendungen, über Verbrennungsmotoren für Gemische aus Wasserstoff und Methan, über Werkstoffe sowie Fragen von Wirkungsgrad und CO<sub>2</sub>-Emissionen.

**International Management in Practice Volume 1** Patrick Siegfried, 2015-08-25 These Case Studies were written from students at the EBC-university of applied sciences Düsseldorf. The students from 6th semester of the study International Business Management have visited the lecture Case Studies in International Management. In this book Case studies from 8 different companies will be presented. The development of their

enterprises, the position in the market and the strategies (Internationalisation, Merger, Sustainability). At the end of each Case Study are questions, so that other students can answer these questions and with the Case Study.

**Ship Operation Technology** Manfred Pfaff, 2021-08-24 This technical book presents in a concise and concentrated form all the essential aspects of operating a ship. These include the basics of buoyancy and propulsion technology, ship safety, occupational safety and environmental protection on board as well as important auxiliary equipment. These aspects are explained in more detail using numerous examples. The book is intended for ship's engineers at university, on board and in shipping companies as well as for design engineers in the shipyard. This book is a translation of the original German 1st edition *Schiffsbetriebstechnik* by Manfred Pfaff, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2018. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

*Design for Micro-Combined Cooling, Heating and Power Systems* Nicolae Badea, 2014-09-25 This book provides a manual for the technical and structural design of systems for supplying decentralised energy in residential buildings. It presents the micro-combined cooling, heating & power systems Stirling engines & renewable energy sources (mCCHP-SE-RES) systems in an accessible manner both for the public at large, and for professionals who conceive, design or commercialise such systems or their components. The high performance levels of these systems are demonstrated within the final chapter by the results of an experiment in which a house is equipped with a mCCHP-SE-RES system. The reader is also familiarized with the conceptual, technical and legal aspects of modern domestic energy systems; the components that constitute these systems; and advanced algorithms for achieving the structural and technical design of such systems. In residential buildings, satisfying demands of durable development has gradually evolved from necessity to obligation and institutionalisation. Consequently a major paradigm change has appeared in the supply of energy to residential buildings, from the centralised production of energy using fossil fuels to the decentralised production of energy using local renewable sources. Furthermore, on the energy system market, energy micro systems which use renewable energy sources are increasingly commercialised. From among these, the mCCHP-SE-RES systems are particularly striking because they offer a high performance and they enhance the relationship between humans and the environment. This book is intended for postgraduate students of electrical engineering, applied mathematicians, and researchers of modelling and control of complex systems or power system technologies.

**Integrated Drainage Systems Planning and Design for Municipal Engineers** Patrick Ssempeera, 2023-05-05 Urban water management has to take an integrated approach that prioritizes sustainable drainage systems (SuDS) over gray infrastructure. This book elaborates on the planning and evaluation of pipework drainage systems with a focus on modern-day constraints to deliver a solution that favors sustainability as the overarching goal. The book includes a technical section on design of gray and green infrastructure, considering the total lifecycle costs of drainage systems. Advanced computer simulation techniques are discussed after covering the derivation of both standard and empirical equations for appropriate hydrology and hydraulics. The book provides an incorporation of reliability analyses for both green and gray infrastructure starting with techniques for forecasting flows, hydraulic performance, and lifecycle costs. The work also involves 3-D modeling, geospatial and big data analysis, and how these techniques are applied into city management—particularly beneficial to municipal engineers who are increasingly becoming involved in mapping the underground. Soil mechanics and subsurface drainage systems are analyzed and structural aspects of sewers are included. Finally, soil behavior in shear, retaining wall structures, and tunneling is briefly featured in the book. This book will be of interest to (under)graduate and postgraduate engineering students, drainage engineers, urban planners, architects, water engineers, developers, construction contractors, and

municipal engineers.

Product Design and Life Cycle Assessment Ireneusz Zbicinski, 2006

**The Sustainable City V** A. Gospodini, C. A. Brebbia, Enzo Tiezzi, 2008 of the present without compromising the ability of future generations to meet their own needs. In *The Sustainable City V* many interrelated aspects of the urban environment from transport and mobility to social exclusions and crime prevention are addressed. The papers included were originally presented at the Fifth International Conference on Urban Regeneration and Sustainability and will be of interest to city planners, architects, environmental engineers and all academics, professionals and practitioners working in the wide range of disciplines associated with creating a viable urban environment. In this book the papers are published under the following topics: Architectural issues; Cultural heritage; Energy resources systems; Environmental management; Healthy cities; Indicators: ecological, economic, social; Land use and management; Mega cities; Planning issues; Planning, development and management; Public safety; Revitalisation strategies; Socio-economic issues; Spatial modelling; Strategy; Sustainable transportation and transport integration; The community and the city; Traffic and transportation; Urban-rural relationships.

Biogas from Waste and Renewable Resources Dieter Deublein, Angelika Steinhauser, 2011-08-15 The leading book on the market just got better: With its unique approach covering all aspects of setting up and running a biogas plant, this new edition has been expanded to include recent advances in biomass processing. The author is a key player in the field, who has designed numerous small- and industrial-scale biogas plants, and who is also a long-time lecturer on biogas production, thus combining didactical skill with real-life expertise. As such, he covers both the biological and technical aspects of biogas generation. The full range of biogas substrates and processing modes is explained, from agricultural and industrial waste to marine algae and sediment. On-site use of biogas for conversion into electricity, fuel and heat is also discussed, as are safety and regulatory issues. Many real-life examples of European biogas plants already in operation illustrate the contents, as do numerous schemes, diagrams and summary tables. For this new edition, biogas analytics and quality control required for feeding biogas into natural gas networks are included, as is a completely new chapter on the microbiology of biogas-producing bacterial communities.

**The Green Museum** Sarah S. Brophy, Elizabeth Wylie, 2008-08-07 The Green Museum shows museum professionals how they can incorporate green design into new construction and day to day operations, using sustainable practices to save on operating costs and make museums attractive to new fundraising sources.

**Wood Pellet Heating Systems** Dilwyn Jenkins, 2010 *Wood Pellet Heating Systems* is a comprehensive handbook covering all aspects of wood pellet heating technology. The use of wood pellets as an alternative heating fuel is already well established in several countries and is becoming widespread as fossil fuel prices continue to rise and awareness of climate change grows. Wood pellets are a carbon-neutral technology, convenient to use, and can easily be integrated into existing central heating systems or used in independent space heaters. This fully-illustrated and easy-to-follow guide shows how wood-pellet heating works, the different types of systems from small living room stove systems to larger central heating systems for institutions how they are installed, and even how wood pellets are manufactured. Featuring examples from around the world, it has been written for heating engineers and plumbers who are interested in installing systems, home owners and building managers who are considering purchasing a system, advanced DIYers, building engineers and architects, but will be of interest to anyone who requires a clear guide to wood pellet technology.
