*Pacific Symposium on Biocomputing 2009, Kohala Coast, Hawaii, USA, 5-9 January 2009* Russ Altman, 2009 The Pacific Symposium on Biocomputing (PSB) 2009 is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2009 will be held on January 5-9, 2009 in Kamuela, Hawaii. Tutorials will be offered prior to the start of the conference. PSB 2009 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's OC hot topics. In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.

**Cathy Berberian and Music's Muses** Jennifer Paull, 2007 This richly illustrated anthology (containing more than 120 photographs and images) heralds the 25th anniversary of the demise of Cathy Berberian. The celebrated mezzo-soprano, composer, polyhistor and artistic non-conformist died in March 1983 at the age of 57. Jennifer Paull paints her close friend's portrait with perceptive detail and personal reminiscences analysing Berberian's unique standpoint. Paull applies Berberian's comparativist perspective to exploring a miscellany of Music's fascinating facts, stimulating surprises and other musicians who are quintessentially 'different'. The role of the woman, the lack of division between the Arts; dance, design, fashion, imagination, humour, languages, theatre and wit: these, her eclectic components, shaped the borderless artistic landscape of Cathy Berberian into an ingenious philosophy herein elucidated, illustrated and applied. Cathy Berberian's due stature in the History of Music has yet to be fully recognised and sufficiently appreciated.

**Information Computing and Applications** Baoxiang Liu, Chunlai Chai, 2011-12-02 This book constitutes the refereed proceedings of the Second International Conference on Information Computing and Applications, ICICA 2010, held in Qinhuangdao, China, in October 2011. The 97 papers presented were carefully reviewed and selected from numerous submissions. They are organized in topical sections on computational economics and finance, computational statistics, mobile computing and applications, social networking and computing, intelligent computing and applications, internet and Web computing, parallel and distributed computing, and system simulation and computing.

**The Digital Revolution and Governance** Xiudian Dai, 2018-04-27 This title was first published in 2000. This text examines the politics of the digital age, looking at topics including new industrial policies, the implications of the Internet and global governance of innovation.

**The Crypto Controversy: A Key Conflict in the Information Society** Bert-Jaap Koops, 1998-12-16 Cryptography is essential for information security and electronic commerce, yet it can also be abused by criminals to thwart police wiretaps and computer searches. How should governments address this conflict of interests? Will they require people to deposit crypto keys with a 'trusted' agent? Will governments outlaw cryptography that does not provide for law-enforcement access? This is not yet another study of the crypto controversy to conclude that this or that interest is paramount. This is not a study commissioned by a government, nor is it a report that campaigns on the electronic frontier. The Crypto Controversy is neither a cryptography handbook nor a book drenched in legal jargon. The Crypto Controversy pays attention to the reasoning of both privacy activists and law-enforcement agencies, to the particulars of technology as well as of law, to 'solutions' offered both by cryptographers and by governments. Koops proposes a method to balance the conflicting interests and applies this to the Dutch situation, explaining both technical and legal issues for anyone interested in the subject.

X3D Don Brutzman, Leonard Daly, 2010-07-19 In the early days of the Web a need was recognized for a language to display 3D objects through a browser. An HTML-like language, VRML, was proposed in 1994 and became the standard for describing interactive 3D objects and worlds on the Web. 3D Web courses were started, several best-selling books were published, and VRML continues to be used today. However VRML, because it was based on HTML, is a stodgy language that is not easy to incorporate with other applications and has been difficult to add features to. Meanwhile, applications for interactive 3D graphics have been exploding in areas such as medicine, science, industry, and entertainment. There is a strong need for a set of modern Web-based technologies, applied within a standard extensible framework, to enable a new generation of modeling & simulation applications to emerge, develop, and interoperate. X3D is the next generation open standard for 3D on the web. It is the result of several years of development by the Web 3D Consortium's X3D Task Group. Instead of a large monolithic specification (like VRML), which requires full adoption for compliance, X3D is a component-based architecture that can support applications ranging from a simple non-interactive animation to the latest streaming or rendering applications. X3D replaces VRML, but also provides compatibility with existing VRML content and browsers. Don Brutzman organized the first symposium on VRML and is playing a similar role with X3D; he is a founding member of the consortium. Len Daly is a professional member of the consortium and both Len and Don have been involved with the development of the standard from the start. The first book on the new way to present interactive 3D content over the Web, written by two of the designers of the standard. Plentiful illustrations and screen shots in the full color text Companion website with extensive content, including the X3D specification, sample code and applications, content creation tools, and demos of

**Computing, Philosophy and Cognition** Lorenzo Magnani,Riccardo Dossena,2005 This volume is a collection of papers that explore various areas of common interest between philosophy, computing, and cognition. The book illustrates the rich intrigue of this fascinating recent intellectual story. It begins by providing a new analysis of the ideas related to computer ethics, such as the role in information technology of the so-called moral mediators, the relationship between intelligent machines and warfare, and the new opportunities offered by telepresence, for example in teaching and learning. The book also ties together the concerns of epistemology and logic, showing, for example, the connections between computers, bio-robotics, and scientific research and between computational programs and scientific discovery. Important results coming from recent computational models of deduction, the dynamic nature of meaning, and the role of reasoning and learning in spatial, visual and exemplar-based computational frameworks are also addressed. Some stimulating papers carefully study how the interplay between computing and philosophy has also shed new light on the role of rational acceptance in the logic of belief and on the status of old philosophical topics like embodiment and consciousness, the role of information and the problem of realism in the new digital world. Finally, a considerable part of the book addresses the role of internal and external representations in scientific reasoning and creative inferences as well as the place of manipulation of objects and artifacts in human cognition. Taking these topics together this book describes an aspect of an emerging agenda which is likely to carry the interaction between philosophy, cognition and computing forward into the twenty-first century. The volume is based on the papers that were presented at the International European Conference Computing and Philosophy, E-CAP2004, Italy, held at the University of Paiva, Paiva, Italy in June 2004, chaired by Lorenzo Magnani.

*Modern CSS* Craig Buckler,Ilya Bodrov-Krukowski,Claudio Ribeiro,Tiffany B Brown,David Attard,Ahmed Bouchebra,2018-10-22 CSS has grown from a language for formatting documents into a robust language for designing web applications. Its syntax is easy to learn, making CSS a great entry point for those new to programming. Indeed, it's often the second language that developers learn, right behind HTML. As CSS's feature set and abilities have grown, so has its depth. This book is a collection of articles that explore some of the amazing things that developers can do with CSS today; things that in the past might only have been achievable with some pretty complex JavaScript previously, if at all. It contains: Using CSS Transforms in the Real World by Craig Buckler Variable Fonts: What They Are, and How to Use Them by Claudio Ribeiro Scroll Snap in CSS: Controlling Scroll Action by Tiffany B. Brown Real World Use of CSS with SVG by Craig Buckler CSS and PWAs: Some Tips for Building Progressive Web Apps by David Attard 20 Tips for Optimizing CSS Performance by Craig Buckler Advanced CSS Theming with Custom Properties and JavaScript by Ahmed Bouchebra This book is for developers with some experience of CSS.
