A treatise on the art of making wine from native fruits Friedrich Christian A. Accum,1820

When Good Companies Go Bad Donald W. Beachler,Thomas Shevory,2014-09-09 Covering the entire world of business from heavy industry to the financial houses of Wall Street, this book shines a spotlight on 100 of the most infamous cases of misconduct and malfeasance in corporate history. Corporations are in the business of making money. But when companies forget ethics, take operational shortcuts, or willingly endanger customers and the general public in their quest for profits, disasters of enormous magnitude can result. This book examines 100 of the worst cases of corporate greed and irresponsibility and poses the questions: Is it necessary or desirable to conduct business in this manner? Do the penalties and other punishments levied against these companies go far enough? And what is the government's responsibility for keeping corporate misdeeds in check? Coauthored by distinguished public policy experts, **When Good Companies Go Bad: 100 Corporate Miscalculations**

and Misdeeds presents a representative sample of cases on a variety of topics, such as the financial sector, health care, environmental protection, product liability, and copyright. This broad introduction to the dark side of the corporate world focuses on events and scandals that resulted in substantial financial penalties, regulatory actions, or criminal convictions. The cases are presented in a readable and engaging format, making the book an illuminating and informative read for high school and college students as well as businesspeople, lawyers, journalists, and professors who teach American politics, public law, or public policy.

Asian-american Education Meyer Weinberg, 2012-12-06 Asian-American Education: Historical Background and Current Realities fills a gap in the study of the social and historical experiences of Asians in U.S. schools. It is the first historical work to provide American readers with information about highly individual ethnic groups rather than viewing distinctly different groups as one vague, global entity such as Asians. The people who populate each chapter are portrayed as active participants in their history rather than as passive victims of their culture. Each of the twelve country-specific chapters

begins with a description of the kind of education received in the home country, including how widely available it was, how equal or unequal the society was, and what were the circumstances under which the emigration of children from the country occurred. The latter part of each of these chapters deals with the education these children have received in the United States. Throughout the book, instead of dwelling on a relatively narrow range of children who perform spectacularly well, the author tries to discover the educational situation typical among average students. The order of chapters is roughly chronological in terms of when the first sizable numbers of immigrants came from a specific country.

Equity and Formative Assessment in Higher Education Dorit Alt, Nirit Raichel, 2021-08-13 This book discusses instruction, learning, and assessment in higher education with an emphasis on several effective formative assessment tools and methods such as digital badges, reflective journals, and peer assessment used in learning environments comprising students of diverse, multicultural backgrounds. Each chapter provides a rich theoretical review, followed by a case study detailing the challenges involved in using those assessment methods in a diverse classroom, as well as practical suggestions

for removing potential barriers, especially for minority students. Most of the narrated case studies are accompanied by episodes, thoughts, and feelings expressed by both students and instructors throughout the assessment processes. This book provides a valuable updated reference source for pedagogical and research purposes for a wide audience. Students, teachers, policymakers, curriculum designers, and teacher educators interested in fostering initiatives in higher education can undoubtedly benefit from this book's contents, which are aimed at adapting teaching–learning assessment processes to the unique learning needs of culturally diverse student populations.

History in a Glass Ruth Reichl, 2007

The Wine Industry of South Africa. A Sector Report Cyril Alias, 2015-05-07 Seminar paper from the year 2005 in the subject Business economics - General, grade: 1,0, University of Applied Sciences Bielefeld, course: Internationale Wirtschaftsbeziehungen, language: English, abstract: Although South Africa was not very famous for its beverages, esp. its wines, for long times and has gained fame in

recent years only, the heritage of its vine-growing culture goes back to the mid of the 17th century. European settlers, predominantly from The Netherlands, started to plant first seedlings in the Cape region. It was Jan van Riebeeck, founder of the Cape colony, who brought the seedlings along from Europe in 1655. Some four years later, the first South African wine was ready to be drunk. However, as the Dutch were not too experienced with viticulture, real development took place only when French Huguenots settled in that region in the end of the 17th century. In the mid of the 18th and the beginning of the 19th century, these wines (e.g. the very sweet Constantia wines) were very popular all around Europe, particularly in the royal houses. But afterwards, the demand shrank to nearly zero. In 1973, viticulture was resumed in the African country. However, the wines were boycotted by the rest of the world due to the Apartheid problems within the country. Only from 1990 onwards, South African wine industry is recovering and nowadays belongs to the so-called “New World wines”, which also include products from Chile, Argentina, Australia, New Zealand and the United States (California).

This is the ideal gift book for wine lovers.

Commercial Winemaking Richard P. Vine, 2012-12-06 The very first winemaker may have been a cave man who discovered the magic of fermentation by tasting the result of some crushed grapes having been left inadvertently for a few days. Wine will, literally, make itself. In simplest terms, yeast cells will collect on the outside of grape skins in the form of bloom and, when exposed to the natural sweetness inside the fruit, fermentation of the sugar into carbon dioxide gas and ethyl alcohol will commence. During the millenia that have transpired since the cave man, the state of the art has evolved into five generally accepted categories of classification. Table wines are usually dry (made with no appreciable amount of fermentable sugar remaining) or nearly so, and contain less than 14%

alcohol by volume. They can be white, pink or red and are the result of uncomplicated processes of fermentation, clarification, stabilization, aging and bottling. The term table wine suggests the use for which these wines are intended-at the table with food. The overwhelming majority of the wine produced in the world is in this category. Table wines range from the obscure and ordinary to the most expensive classics known to man.

The Red and the White Leo A. Loubère, 1978-01-01 The delight of Bacchus, wine has ever been man's solace and joy. Growing out of the poorest soil, the wild grape was tamed and blended over

millennia to produce a royal beverage. But the nineteenth century brought a near revolution in the production of wine, and democracy in its consumption; technology made wine an industry, while improved living standards put it on the people's dinner table. The vintners of France and Italy frantically bought land and planted grapes in their attempt to profit from the golden age of wine. But the very technology which made possible swift transportation, with all its benefits to winemen, brought utter devastation from America--the phylloxera aphids--and only when France and Italy had replanted their entire vineyards on American stock did they again supply the thirsty cities and discriminating elite. In an exhaustive examination Professor Loubère follows the wine production process from practices recommended long ago by the Greeks and Romans through the technical changes that occurred in the nineteenth century. He shows how technology interacted with economic, social, and political phenomena to produce a new viticultural world, but one distinct in different regions. Winemen espoused a wide range of politics and economics depending on where they lived, the grapes they grew, and the markets they sought. While a place remained for carefully hand-raised wine, the industry

had, by the end of the century, turned to mass production, though it was capable of great quality control and consistency from year to year. The author uses a wide range of sources, including archives and contemporary accounts. The volume contains extensive figures, tables, graphs, and maps.

A History of Wine in Europe, 19th to 20th Centuries, Volume I Silvia A. Conca Messina,Stéphane Le Bras,Paolo Tedeschi,Manuel Vaquero Piñeiro,2019-11-01 This two-volume collection analyses the evolution of wine production in European regions across the nineteenth and twentieth centuries. France and Italy in particular have shaped modern viticulture, by improving oenological methods and knowledge, then disseminating them internationally. This first volume looks closely at the development

of winegrowing, with cases ranging from Italian and French regions to smaller producers such as Portugal and Slovenia.
