Denial and Deception Melissa Boyle Mahle, 2005-12-21 The reality for a woman agent working in the secret world of intelligence often leads to extraordinary obstacles and sacrifices. Melissa Boyle Mahle, a sixteen-year covert operative for the CIA in the Middle East, was the Agency's top-ranked female Arabist before she left in 2002. In *Denial and Deception*, Mahle not only describes the Agency's successes and failures, but details her life as a woman in one of the last professions that remain almost exclusively male-directed and dominated. The author has a unique vantage point from which to view the political and operational culture of the CIA in the post-Cold War climate, and reveals how it failed to anticipate the 9/11 attacks. From Ronald Reagan to George W. Bush, she provides a vivid narrative of how the agency became a rudderless organization, lost in the post-Cold War world. Afraid to take risks that might offend Congress and European allies after overstepping its legal bounds in the Iran-Contra era, gutted of the clandestine operators who knew how to run secret wars, demoralized by criticism and poor performance, the CIA simply became unable and unwilling to get down and dirty to do the hard part to fight a real war on terrorism.

The Ethics of Playing, Researching, and Teaching Games in the Writing Classroom Richard Colby, Matthew S.S. Johnson, Rebekah Shultz Colby, 2021-01-27 This book explores ethos and games while analyzing the ethical dimensions of playing, researching, and teaching games. Contributors, primarily from rhetoric and writing studies, connect instances of ethos and ethical practice with writing pedagogy, game studies, video games, gaming communities, gameworlds, and the gaming industry. The collection's eighteen chapters investigate game-based writing classrooms, gamification, game design, player agency, and writing and gaming scholarship in order to illuminate how ethos is reputed, interpreted, and remembered in virtual gamespaces and in the gaming industry. Ethos is constructed, invented, and created in and for games, but inevitably spills out into other domains, affecting agency, ideology, and the cultures that surround game developers, players, and scholars.

The Real Cyber War Shawn M. Powers, Michael Jablonski, 2015-03-15 Contemporary discussion surrounding the role of the internet in society is dominated by words like: internet freedom, surveillance, cybersecurity, Edward Snowden and, most prolifically, cyber war. Behind the rhetoric of cyber war is an on-going state-centered battle for control of information resources. Shawn Powers and Michael Jablonski conceptualize this real cyber war as the utilization of digital networks for geopolitical purposes, including covert attacks against another state's electronic systems, but also, and more importantly, the variety of ways the internet is used to further a state's economic and military agendas. Moving beyond debates on the democratic value of new and emerging information technologies, *The Real Cyber War* focuses on political, economic, and geopolitical factors driving internet freedom policies, in particular the U.S. State Department's emerging doctrine in support of a universal freedom to connect. They argue that efforts to create a universal internet built upon Western legal, political, and social preferences is driven by economic and geopolitical motivations rather than the humanitarian and democratic ideals that typically accompany related policy discourse. In fact, the freedom-to-connect movement is intertwined with broader efforts to structure global society in ways that favor American and Western cultures, economies, and governments. Thought-provoking and far-seeing, *The Real Cyber War* reveals how internet policies and governance have emerged as critical sites of geopolitical contestation, with results certain to shape statecraft, diplomacy, and conflict in the twenty-first century.

Photodynamic Therapy Mahmoud H. Abdel-Kader, 2014-01-09 Photodynamic Therapy: From Theory to Application brings attention to an exceptional treatment strategy, which until now has not achieved the recognition and breadth of applications it deserves. The authors, all experts and pioneers in their field, discuss the history and basic principles of PDT, as well as the fundamentals of the theory, methods, and instrumentation of clinical diagnosis and treatment of cancer. Non-oncological applications such as the use of PDT in control of parasites and noxious insects are also discussed. This book serves as a standard reference for researchers and students at all levels, clinical specialists interested in the topic and those in industry exploring new areas for development. A comprehensive exposition of both the theory and application of PDT, this book fills the gaps in the current literature by bringing together both basic understanding of the process of PDT and an expanded vision of its applications.

Orchestrating and Automating Security for the Internet of Things Anthony Sabella, Rik Irons-Mclean, Marcelo Yannuzzi, 2018-06-04 Master powerful techniques and approaches for securing IoT systems of all kinds-current and emerging Internet of Things (IoT) technology adoption is accelerating, but IoT presents complex new security challenges. Fortunately, IoT standards and standardized architectures are emerging to help technical professionals systematically harden their IoT environments. In *Orchestrating and Automating Security for the Internet of Things*, three Cisco experts show how to safeguard current and future IoT systems by delivering security through new NFV and SDN architectures and related IoT security standards. The authors first review the current state of IoT networks and architectures, identifying key security risks associated with nonstandardized early deployments and showing how early adopters have attempted to respond. Next, they introduce more mature architectures built around NFV and SDN. You'll discover why these lend themselves well to IoT and IoT security, and master advanced approaches for protecting them. Finally, the authors preview future approaches to improving IoT security and present real-world use case examples. This is an indispensable resource for all technical and security professionals, business security and risk managers, and consultants who are responsible for systems that incorporate or utilize IoT devices, or expect to be responsible for them. · Understand the challenges involved in securing current IoT networks and architectures · Master IoT security fundamentals, standards, and modern best practices · Systematically plan for IoT security · Leverage Software-Defined Networking (SDN) and Network Function Virtualization (NFV) to harden IoT networks · Deploy the advanced IoT platform, and use MANO to manage and orchestrate virtualized network functions · Implement platform security services including identity, authentication, authorization, and accounting · Detect threats and protect data in IoT environments · Secure IoT in the context of remote access and VPNs · Safeguard the IoT platform itself · Explore use cases ranging from smart cities and advanced energy systems to the connected car · Preview evolving concepts that will shape the

Who Owns the Dead? Jay D. Aronson, 2016-09-06 After the 9/11 attack on the World Trade Center, Chief Medical Examiner Charles Hirsch proclaimed that his staff would do more than confirm the victims' identity. They would attempt to return to families every human body part larger than a thumbnail. As Jay D. Aronson shows, delivering on that promise proved to be a monumentally difficult task.

Omega-3 Fatty Acids, the Brain and Retina Artemis P. Simopoulos, Nicolás G. Bazán, 2009-01-01 Research on omega-3 fatty acids has come a long way since its beginnings in the middle 70's. Starting with studies on the role of omega-3 fatty acids in the secondary prevention of cardiovascular disease, interest soon turned to the mechanisms of and the need to balance the omega-6 to the omega-3 ratio for homeostasis and normal development. Today, it is widely accepted that docosahexaenoic acid (DHA) and arachidonic acid are essential for brain development during pregnancy, lactation and throughout the life cycle. It is also no longer controversial that DHA can affect brain function, mental health and behavior, and studies on supplemental DHA in age-related macular degeneration have revealed significant Interactions between DHA and genetic variants. Featuring contributions by leading scientists in the field, this publication discusses not only the role of omega-3 fatty acids in maintaining homeostasis, but also their importance in the prevention and management of neurodegenerative diseases associated with the aging process or genetic predisposition. It is thus not only of interest to nutritionists, dieticians or policy makers, but also to psychologists, physiologists, neuroscientists, psychiatrists, ophthalmologists, geneticists, neurologists, pediatrists, obstetricians and geriatricians.

Written and edited by leaders in the fields of ophthalmology, rheumatology, internal medicine, infectious disease, and oncology, each chapter addresses the latest advances in the field: from the advent of PCR technology, intraocular depot steroid implants, neoplastic and infectious diseases masquerading as uveitis, and the use of systemic immunomodulatory therapies (including biologic agents/humanized monoclonal antibodies).

Technological Innovation in Legacy Sectors William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems: expanding innovation and raising the rate of quality job creation. Both have roots in a neglected problem: the resistance of Legacy economic sectors to innovation. While the U.S. has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology, most of its economy is locked into Legacy sectors defended by technological/ economic/ political/ social paradigms that block competition from disruptive innovations that could challenge their models. Americans like to build technology covered wagons and take them out west to open new innovation frontiers; we don't head our wagons back east to bring innovation to our Legacy sectors. By failing to do so, the economy misses a major opportunity for innovation, which is the bedrock of U.S. competitiveness and its standard of living. *Technological Innovation in Legacy Sectors* uses a new, unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors: energy, air and auto transport, the electric power grid, buildings, manufacturing, agriculture, health care delivery and higher education, and develops approaches to understand and transform them. It finds both strengths and obstacles to innovation in the national innovation environments - a new concept that combines the innovation system and the broader innovation context - for a group of Asian and European economies. Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process. By increasingly offshoring production, the U.S. is losing important parts of its innovation capacity. Innovate here, produce here, where the U.S. took all the gains of its strong innovation system at every stage, is being replaced by innovate here, produce there, which threatens to lead to produce there, innovate there. To bring innovation to Legacy sectors, authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation. They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations. In the specific case of advanced manufacturing, the production ecosystem can be recreated to reverse jobless innovation and add manufacturing-led innovation to the U.S.'s still-strong, research-oriented innovation system.
