A Smart Energy System for Sustainable Buildings Faris Nizamic, 2016-01-21 Today's buildings are responsible for more than 40% of the world's total energy consumption. Current systems that manage equipment in buildings fail to reduce unnecessary energy consumption while at the same time maintaining the comfort of those using the buildings. This is usually because the existing systems cannot cope with the changes caused by interactions between people and the building environment. Furthermore, people using buildings are not sufficiently aware of how much buildings consume and of what concrete actions could help to reduce this consumption. Moreover, current building management systems do not take into account feedback from building users and their preferences regarding the conditions in their working environment. We designed and implemented a smart energy system to overcome these gaps. Our system took into account the behavior of building users so as to provide automated control of energy consumption and other processes within an actual building. With this system we also provided user dashboards to serve as a means of communication between the

building and its users. In addition to reducing energy consumption we also introduced related optimizations such as reduction of water consumption and improvement of waste management, using the same system principles. We installed a prototype of this system in a modern university building, the Bernoulliborg, to show how such a system is realizable in actual working office space. This building served as the evaluation platform for our research.

**Wavelets in Neuroscience** Alexander E. Hramov, Alexey A. Koronovskii, Valeri A. Makarov, Alexey N. Pavlov, Evgenia Sitnikova, 2014-08-05 This book examines theoretical and applied aspects of wavelet analysis in neurophysics, describing in detail different practical applications of the wavelet theory in the areas of neurodynamics and neurophysiology and providing a review of fundamental work that has been carried out in these fields over the last decade. Chapters 1 and 2 introduce and review the relevant foundations of neurophysics and wavelet theory, respectively, pointing on one hand to the various current challenges in neuroscience and introducing on the other the mathematical techniques of the wavelet transform in its two variants (discrete and continuous) as a powerful and versatile tool

for investigating the relevant neuronal dynamics. Chapter 3 then analyzes results from examining individual neuron dynamics and intracellular processes. The principles for recognizing neuronal spikes from extracellular recordings and the advantages of using wavelets to address these issues are described and combined with approaches based on wavelet neural networks (chapter 4). The features of time-frequency organization of EEG signals are then extensively discussed, from theory to practical applications (chapters 5 and 6). Lastly, the technical details of automatic diagnostics and processing of EEG signals using wavelets are examined (chapter 7). The book will be a useful resource for neurophysiologists and physicists familiar with nonlinear dynamical systems and data processing, as well as for graduate students specializing in the corresponding areas.

International Handbook of Emotions in Education Reinhard Pekrun, Lisa Linnenbrink-

Garcia, 2014-04-16 For more than a decade, there has been growing interest and research on the pivotal role of emotions in educational settings. This ground-breaking handbook is the first to highlight

this emerging field of research and to describe in detail the ways in which emotions affect learning and instruction in the classroom as well as students' and teachers' development and well-being. Informed by research from a number of related fields, the handbook includes four sections. Section I focuses on fundamental principles of emotion, including the interplay among emotion, cognition, and motivation, the regulation of emotion, and emotional intelligence. Section II examines emotions and emotion regulation in classroom settings, addressing specific emotions (enjoyment, interest, curiosity, pride, anxiety, confusion, shame, and boredom) as well as social-emotional learning programs. Section III highlights research on emotions in academic content domains (mathematics, science, and reading/writing), contextual factors (classroom, family, and culture), and teacher emotions. The final section examines the various methodological approaches to studying emotions in educational settings. With work from leading international experts across disciplines, this book synthesizes the latest research on emotions in education.

**Cinematic Cold War** Tony Shaw, Denise J. Youngblood, 2014-08-15 The Cold War was as much a battle of ideas as a series of military and diplomatic confrontations, and movies were a prime battleground for this cultural combat. As Tony Shaw and Denise Youngblood show, Hollywood sought to export American ideals in movies like Rambo, and the Soviet film industry fought back by showcasing Communist ideals in a positive light, primarily for their own citizens. The two camps traded cinematic blows for more than four decades. The first book-length comparative survey of cinema's vital role in disseminating Cold War ideologies, Shaw and Youngblood's study focuses on ten films—five American and five Soviet—that in both obvious and subtle ways provided a crucial outlet for the global debate between democratic and communist ideologies. For each nation, the authors outline industry

leaders, structure, audiences, politics, and international reach and explore the varied relationships linking each film industry to its respective government. They then present five comparative case studies, each pairing an American with a Soviet film: *Man on a Tightrope* with *The Meeting on the Elbe*; *Roman Holiday* with *Spring on Zarechnaya Street*; *Fail-Safe* with *Nine Days in One Year*; *Bananas* with *Officers*; *Rambo: First Blood Part II* with *Incident at Map Grid 36-80*. Shaw breathes new life into familiar American films by Elia Kazan and Woody Allen, while *Youngblood* helps readers comprehend Soviet films most have never seen. Collectively, their commentaries track the Cold War in its entirety—from its formative phase through periods of thaw and self-doubt to the resurgence of mutual animosity during the Reagan years—and enable readers to identify competing core propaganda themes such as decadence versus morality, technology versus humanity, and freedom versus authority. As the authors show, such themes blurred notions regarding propaganda and entertainment, terms that were often interchangeable and mutually reinforcing during the Cold War. Featuring engaging commentary and evocative images from the films discussed, *Cinematic Cold War* offers a

shrewd analysis of how the silver screen functioned on both sides of the Iron Curtain. As such it should have great appeal for anyone interested in the Cold War or the cinematic arts.

**Tourism Destination Evolution** Patrick Brouder, Salvador Anton Clavé, Alison Gill, Dimitri Ioannides, 2016-07-15 Outlining the need for fresh perspectives on change in tourism, this book offers a theoretical overview and empirical examples of the potential synergies of applying evolutionary economic geography (EEG) concepts in tourism research. EEG has proven to be a powerful explanatory paradigm in other sectors and tourism studies has a track record of embracing, adapting, and enhancing frameworks from cognate fields. EEG approaches to tourism studies complement and further develop studies of established themes such as path dependence and the Tourism Area Life Cycle. The individual chapters draw from a broad geographical framework and address distinct conceptual elements of EEG, using a diverse set of tourism case studies from Europe, North America and Australia. Developing the theoretical cohesion of tourism and EEG, this volume also gives non-specialist tourism scholars a window into the possibilities of using these concepts in their own

research. Given the timing of this publication, it has great potential value to the wider tourism community in advancing theory and leading to more effective empirical research.

**Sneaking a Look at God's Cards** Giancarlo Ghirardi, 2021-09-14 Quantum mechanics, which describes the behavior of subatomic particles, seems to challenge common sense. Waves behave like particles; particles behave like waves. You can tell where a particle is, but not how fast it is moving--or vice versa. An electron faced with two tiny holes will travel through both at the same time, rather than one or the other. And then there is the enigma of creation ex nihilo, in which small particles appear with their so-called antiparticles, only to disappear the next instant in a tiny puff of energy. Since its inception, physicists and philosophers have struggled to work out the meaning of quantum mechanics. Some, like Niels Bohr, have responded to quantum mechanics' mysteries by replacing notions of position and velocity with probabilities. Others, like Einstein and Penrose, have disagreed and think that the entire puzzle reflects not a fundamental principle of nature but our own ignorance of basic scientific processes. **Sneaking a Look at God's Cards** offers the general reader a deep and real

understanding of the problems inherent to the interpretation of quantum mechanics, from its inception to the present. The book presents a balanced overview of current debates and explores how the theory of quantum mechanics plays itself out in the real world. Written from the perspective of a leading European physicist, it looks extensively at ideas from both sides of the Atlantic and also considers what philosophers have contributed to the scientific discussion of this field. Sneaking a Look at God's Cards sets out what we know about the endlessly fascinating quantum world, how we came to this understanding, where we disagree, and where we are heading in our quest to comprehend the seemingly incomprehensible.

**Coffee Culture, Destinations and Tourism** Lee Jolliffe, 2010 Aspects of global coffee culture are explored as they relate to the settings where the beverage is produced, prepared and consumed as part of coffee related tourism. Of particular note on the one hand is the potential of such tourism for developing tourism destinations, products and experiences; while on the other hand improving the livelihoods of coffee producers.

*The Oxford Handbook of Emotion Dysregulation* Theodore P. Beauchaine, Sheila E. Crowell, Sheila Elizabeth Crowell, 2020

The Oxford Handbook of Emotion Dysregulation is the first to consider the ED construct as distinct from what is known as emotion regulation (ER; a variety of automatic and volitional strategies, behaviors, and skills that are used to modulate emotional experiences and expressions), featuring chapters by scholars whose work is on the cutting edge of basic and clinical understanding of ED. This Handbook examines the ED construct from multiple viewpoints across levels of analysis and considers the role that ED plays in the expression of various forms of psychopathology. Chapters explore basic understanding of emotions and ED as transdiagnostic constructs (Part I); cognitive, behavioral, and social approaches to evaluating ED (Part II); neurobiological advances in our understanding of ED (Part III); associations between ED and psychopathology (Part IV); and assessment and treatment of ED (Part V). Part VI includes chapters on Conclusions and Future Directions. The Handbook can serve as a primary or complementary text for advanced undergraduate and graduate-level seminars/courses on emotion dysregulation and

psychopathology more broadly--

Losing Military Supremacy Andrei Martyanov,2018-06-04 Marytanov explains why and how the US armed forces have lost the military supremacy they thought they once had and how Russia, which supposedly had been defeated in the Cold War, succeeded not only in catching up with USA, but actually surpassing it in many key domains such as long range cruise missiles, diesel-electric submarines, air defenses, electronic warfare, air superiority and many others. Andrei Martyanov's book is an absolute 'must read' for any person wanting to understand the reality of modern warfare and super-power competition. THE SAKER While exceptionalism is not unique to America, the intensity of their conviction and its global ramifications are. This view of its exceptionalism has led the US to grossly misinterpret—sometimes deliberately—the causative factors of key events of the past two centuries. Accordingly, the wrong conclusions have been derived, and very wrong lessons learned. Nowhere has this been more manifest than in American military thought and its actual application of military power. Time after time the American military has failed to match lofty declarations about its

superiority, producing instead a mediocre record of military accomplishments. Starting from the Korean War the United States hasn't won a single war against a technologically inferior, but mentally tough enemy. The technological dimension of American "strategy" has completely overshadowed any concern with the social, cultural, operational and even tactical requirements of military (and political) conflict. With a new Cold War with Russia emerging, the United States enters a new period of geopolitical turbulence completely unprepared in any meaningful way—intellectually, economically, militarily or culturally—to face a reality which was hidden for the last 70+ years behind the curtain of never-ending Chalabi moments and a strategic delusion concerning Russia, whose history the US viewed through a Solzhenitsified caricature kept alive by a powerful neocon lobby, which even today dominates US policy makers' minds. Martyanov's former Soviet military background enables deep insight into the fundamental issues of warfare and military power as a function of national power—assessed correctly, not through the lens of Wall Street "economic" indices and a FIRE economy, but through the numbers of enclosed technological cycles and culture, much of which has

been shaped in Russia by continental warfare and which is practically absent in the US.

Biomedical Applications of Natural Proteins Dhiraj Kumar, Rajesh R. Kundapur, 2015-08-07 This book is intended as a reference guide for graduate students, postgraduate students and researchers with a basic knowledge of protein chemistry who would like to know more about the biomedical applications of natural proteins to promote healthier lives. The book is divided into ten chapters, each of which explains different natural proteins and their established biomedical applications. The first chapter extensively deals with protein based natural fibers and provides an overview of all protein based fibers currently available. In turn, chapter two mainly focuses on the biomedical applications of a special class of proteins called Heat Shock Proteins; the biomedical applications of silkworm pupae proteins are dealt in chapter three. Chapter four examines an interesting use of Eri silk fibroin as a biomaterial for Tissue Engineering, while chapter five discusses the key experimental details involved

in converting Tasar silk sericin into self-assembled nanoparticles. Chapter six offers brief descriptions of bioactive proteins with respect to their sources, synthesis and applications. Chapter seven is dedicated to Interleukine-8 and its role in human life, while chapter eight addresses the importance of natural proteins in infectious diseases. Chapter nine explores the issue of excess intake of dietary proteins and its adverse effects, and finally, chapter ten discusses the efficiency of drug delivery systems made up of gelatin nanocomposites. The book is above all intended as a valuable resource for students and researchers alike, sparking their curiosity with regard to the applications of natural proteins and motivating them to focus their own energies on the discovery or identification of additional natural proteins for diverse biomedical uses.

**Recognition in International Relations** C. Daase,A. Geis,Caroline Fehl,Georgios

Kolliarakis,2015-05-12 Recognition is a basic human need, but it is not a panacea to all societal ills. This volume assembles contributions from International Relations, Political Theory and International Law in order to show that recognition is a gradual process and an ambiguous concept both in theory and political practice.

**Lake Issyk-Kul: Its Natural Environment** J. Klerx,Beishen Imanackunov,2012-12-06 Lake Issyk-Kul is a closed lake located in the Tien Shan mountain belt of the Republic of Kyrgyzstan. It is the world's fifth deepest lake (668 m) and the second largest high altitude lake in the world (1607 m above sea level). The lake is affected by several environmental threats of both anthropogenic and natural origin: decline of the lake level resulting in progressively increasing salinity, incomplete vertical water exchange, and risk of contamination by past and present industrial activity. Although the lake has been intensively studied, the information is only available in unpublished reports or local scientific journals. This book presents for the first time to an international audience the main physical, chemical, biological

and geological characteristics of the lake, the fruits of many years of observations, complemented by recent results of international projects. Case studies of similar problems in other parts of the world are presented, together with ethical aspects of the environmental protection of the lake.

**Rural Tourism** Richard Sharpley, Julia Sharpley, 1997 This text provides a comprehensive, stimulating and up-to-date analysis of the key issues involved in the planning and management of rural tourism. The book makes extensive use of case studies to illustrate the issues and problems discussed in the text. These include agrotourism in Cyprus, tourism development in Ireland, rural tourism in Utah, National Parks in Australia, marketing farm tourism in Austria and rural tourism in Romania.

*Legal Language* Peter M. Tiersma, 1999 This history of legal language slices through the polysyllabic thicket of legalese. The text shows to what extent legalese is simply a product of its past and demonstrates that arcane vocabulary is not an inevitable feature of our legal system.

New Directions in Rural Tourism Lesley Roberts, Derek Hall, Mitchell Morag, 2017-03-02 Although there has been an increasing interest in rural tourism in terms of research, training and teaching in

recent years, its conceptualization and the relationships between concept and strategy are still poorly represented and not well understood. The need for such a critical understanding is particularly crucial as rural areas experience rapid change, and as tourism is viewed as a key element of development and regeneration. This volume provides an interdisciplinary approach to new directions in rural tourism, drawing on the latest conceptual thinking and evolving strategic roles. It brings together case study exemplification from the UK, Denmark, Norway, Austria, Spain, Slovenia, Poland, New Zealand and the Caribbean. It debates such key issues as sustainability and niche marketing. The book thus provides accessible material drawn from a range of environmental and cultural contexts and focuses attention on the nature and interrelationships between local and global issues in rural tourism and development.
