The Art Salon in the Arab Region Monique Bellan, Nadia von Maltzahn, 2019-03 This volume discusses the emergence and role of the art salon in the Arab region in the nineteenth and twentieth centuries, focusing on Algeria, Tunisia, Egypt, Lebanon and Iraq. Institutional forms of exhibiting and teaching art emerged in the Middle East and North Africa in late colonial and early post-colonial contexts. The book examines how the salon had an impact on the formation of taste and on debates on art, and discusses the transfers and cultural interactions between the Middle East, North Africa and Europe. Following the institutional model of the Paris salons, art salons emerged in Algiers, Tunis and Cairo starting in the late 1880s. In Beirut, the salon tradition reached its peak only after independence in the mid-twentieth century. Baghdad never had a formal salon, but alternative spaces and exhibition formats developed in Iraq from the late 1940s onwards. As in Paris, the salons in the region often defined the criteria of artistic production and public taste. The impact of the salon also lay in its ability to convey particular values, attitudes and aspirations. At the same time, the values and attitudes

promoted by the salon as well as the salon itself were often subject to debate, which led to the creation of counter-salons or alternative exhibition practices. The art salon helps us to understand changes in the art systems of these countries, including the development of art schools, exhibition spaces and artist societies, and gives insight into the power dynamics at play. It also highlights networks and circulations between the Arab region and Europe.

Constructions in French Myriam Bouveret, Dominique Legallois, 2012-12-19 The book *Constructions in French* is the first collected volume to focus on French syntax from a constructionist perspective. It has been written with two kinds of readers in mind: for readers interested in the relationship between the French linguistic tradition and cognitive linguistics, and for readers who would like to examine how constructional analysis can be applied to a variety of French language phenomena. The eleven papers illustrate the insights generated by combining lexicalist and constructionist approaches, focusing on syntax as a dynamic system and using corpus data from a variety of speech genres. The contributions provide new findings about French usage trends (in linguistics and in psycholinguistics), including

insights into new, nonstandard and poorly studied constructions.

Biotribology Duncan Dowson, 2019-12-04

Aqueous Lubrication Nicholas D Spencer, 2014-03-12 Man lubricates mostly with oil. Nature lubricates exclusively with water. Pure water is a poor lubricant, but the addition of proteins, especially glycoproteins, can modify surfaces to make them far more lubricating at slow speeds. Understanding how nature does this, and the physical structures involved, is not only important for the understanding of diseases such as osteoarthritis, but also essential for the successful application of articulating implants, such as hips and knees, as well as the development of medical devices such as catheters and contact lenses. A host of important applications of water-based lubrication are already in place in the personal care and food industries, and further industrial applications of water-based lubrication could have a significant positive impact on the environment. This book is the first of its kind. It brings together the latest research in biological and biomimetic, water-based lubrication and is authored by the world's experts in the field. Contents: Tribology of Natural Articular Joints (Rowena Crockett) Sticky

and Slippery: Interfacial Forces of Mucin and Mucus Gels (Seunghwan Lee)Aqueous Lubrication and Food Emulsions (Jason R Stokes)Aqueous Lubrication in Cosmetics (Gustavo S Luengo, Anthony Galliano and Claude Dubief)Hydrogel Friction and Lubrication (Jian Liu and Jian Ping Gong)Aqueous Lubrication with Polymer Brushes (Suzanne Giasson and Nicholas D Spencer)Water-Like Lubrication of Hard Contacts by Polyhydric Alcohols (Jean Michel Martin and Maria Isabel De Barros-Bouchet)Aqueous Lubrication of Ceramics (Mitjan Kalin) Readership: Academic and industrial tribologists, materials scientists, biomechanics professionals, and physicists and chemists with an interest in tribology. Keywords:Lubrication;Water;Polymers;Cartilage;Mucin;Ceramics;Gels;Personal Care;Food Emulsion

The Third Body Concept: Interpretation of Tribological Phenomena C.M. Taylor,T.H.C. Childs,Y. Berthier,L. Flamand,G. Dalmaz,D. Dowson,A A Lubrecht,J.M. Georges,1996-09-11 The central theme of this book, The Third Body Concept: Interpretation of Tribological Phenomena, was chosen to honour the work of Professor Maurice Godet. The aim of this and previous conferences in the series is to

select a topic of current interest to tribologists in order to further advance knowledge in selected fields. Presented by leading scientists from 23 countries, these proceedings provide an up-to-date review of developments in this field..

Functional Dyspepsia Kazunari Tominaga,Hiroaki Kusunoki,2018-08-20 The research and outcomes presented in this book gather evidence concerning both the pathogenesis and treatment of functional dyspepsia. It provides the latest information on this common non-organic disease, indicating its characteristic pathogenesis based on the brain-gut interaction and micro-environment and evidence gleaned from clinical treatment. Since the pathogenesis is associated with psychology, neurology, endocrinology and bacteriology in addition to gastroenterological physiology, it is often intractable and finding a suitable treatment rationale is challenging. Furthermore, the pathogenesis varies around the world and the efficacy of treatment using standard drugs varies among different populations worldwide; accordingly, this book highlights evidence gained in clinical trials in Japan. Functional Dyspepsia is a milestone produced by respected experts. Addressing unique topics and new findings of treatment

including challenging and/or future rationales, it offers an invaluable resource for general clinicians, gastroenterologists, and basic researchers alike.

Moon-face and Other Stories Jack London, 1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. *The son of the Wolf* (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, *The Call of the Wild* (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including *The Sea-Wolf* (1904), *White Fang* (1906), *South Sea Tales* (1911), and *Jerry of the South Seas* (1917). One of London's most interesting novels is the semi-autobiographical *Martin Eden* (1909). He also wrote socialist treatises,

autobiographical essays, and a good deal of journalism.

Coronavirus Politics Scott L. Greer, Elizabeth King, Elize Massard da Fonseca, André Peralta-Santos, 2021-04-19 COVID-19 is the most significant global crisis of any of our lifetimes. The numbers have been stupefying, whether of infection and mortality, the scale of public health measures, or the economic consequences of shutdown. *Coronavirus Politics* identifies key threads in the global comparative discussion that continue to shed light on COVID-19 and shape debates about what it means for scholarship in health and comparative politics. Editors Scott L. Greer, Elizabeth J. King, Elize Massard da Fonseca, and André Peralta-Santos bring together over 30 authors versed in politics and the health issues in order to understand the health policy decisions, the public health interventions, the social policy decisions, their interactions, and the reasons. The book's coverage is global, with a wide range of key and exemplary countries, and contains a mixture of comparative, thematic, and templated country studies. All go beyond reporting and monitoring to develop explanations that draw on the authors' expertise while engaging in structured conversations across the

book.

Biomechanics of the Gastrointestinal Tract Hans Gregersen, 2013-04-18 Biomechanics of the Gastrointestinal Tract is an up-to-date book for researchers on the study of the mechanical properties and the motor system of the gastrointestinal tract. A well-illustrated book, it provides a comprehensive overview to relevant tissue geometry, morphology and biomechanical theory. Separate chapters cover smooth muscle and nerve function including the application to animal and human studies of motility, symptoms and pain, determination of the true resting state, history-dependent properties, and tissue remodelling in disease. Several methods and diagnostic applications such as determination of in vivo length-tension diagrams and multimodal pain testing are completely new but will undoubtedly be used by many in the future. New non-invasive imaging techniques based on ultrasound, MR- and CT-scanning in combination with balloon distension are emerging as the techniques for future in vivo studies.

Deaf Sentence David Lodge, 2009-09-29 The subject of enthusiastic and widespread reviews,

David Lodge's fourteenth work of fiction displays the humor and shrewd observations that have made him a much-loved icon. *Deaf Sentence* tells the story of Desmond Bates, a recently retired linguistics professor in his mid-sixties. Vexed by his encroaching deafness and at loose ends in his personal life, Desmond inadvertently gets involved with a seemingly personable young American female student who seeks his support in matters academic and not so academic, who finally threatens to destabilize his life completely with her unpredictable-and wayward-behavior. What emerges is a funny, moving account of one man's effort to come to terms with aging and mortality-a classic meditation on modern middle age that fans of David Lodge will love.

Molecular Biology of Photosynthesis Govindjee,Hans J. Bohnert,W. Bottomley,D.A. Bryant,John E. Mullet,W.L. Ogren,Himadri Pakrasi,C.R. Somerville,2012-12-06 Molecular biology, particularly molecular genetics, is among the newest and most powerful approach in modern photosynthesis research. Development of molecular biology techniques has provided new methods to solve old problems in many biological disciplines. Molecular biology has its greatest potential for contribution

when applied in combination with other disciplines, to focus not just on genes and molecules, but on the complex interaction between them and the biochemical pathways in the whole organism.

Photosynthesis is surely the best studied research area in plant biology, making this field the foremost candidate for successfully employing molecular genetic techniques. Already, the success of molecular biology in photosynthesis has been nothing short of spectacular. Work performed over the last few years, much of which is summarized in this volume, stands in evidence. Techniques such as site-specific mutagenesis have helped us in examining the roles of individual protein domains in the function of multiunit complexes such as the enzyme ribulose-1,5-bisphosphate carboxylase/oxygenase (RUBISCO) and the oxygen evolving photo system (the photosystem II). The techniques of molecular biology have been very important in advancing the state of knowledge of the reaction center from the photosynthetic bacteria whose structure has been elegantly deduced by H. Michel and I. Deisenhofer from the X-ray studies of its crystals.

Plasma Atomic Physics Frank B. Rosmej, Valery A. Astapenko, Valery S. Lisitsa, 2021-09-07

Plasma Atomic Physics provides an overview of the elementary processes within atoms and ions in plasmas, and introduces readers to the language of atomic spectra and light emission, allowing them to explore the various and fascinating radiative properties of matter. The book familiarizes readers with the complex quantum-mechanical descriptions of electromagnetic and collisional processes, while also developing a number of effective qualitative models that will allow them to obtain adequately comprehensive descriptions of collisional-radiative processes in dense plasmas, dielectronic satellite emissions and autoionizing states, hollow ion X-ray emissions, polarized atoms and ions, hot electrons, charge exchange, atomic population kinetics, and radiation transport. Numerous applications to plasma spectroscopy and experimental data are presented, which concern magnetic confinement fusion, inertial fusion, laser-produced plasmas, and X-ray free-electron lasers' interaction with matter. Particular highlights include the development of quantum kinetics to a level surpassing the almost exclusively used quasi-classical approach in atomic population kinetics, the introduction of the recently developed Quantum-F-Matrix-Theory (QFMT) to study the impact of plasma microfields on atomic

populations, and the Enrico Fermi equivalent photon method to develop the “Plasma Atom”, where the response properties and oscillator strength distribution are represented with the help of a local plasma frequency of the atomic electron density. Based on courses held by the authors, this material will assist students and scientists studying the complex processes within atoms and ions in different kinds of plasmas by developing relatively simple but highly effective models. Considerable attention is paid to a number of qualitative models that deliver physical transparency, while extensive tables and formulas promote the practical and useful application of complex theories and provide effective tools for non-specialist readers.

Current topics in photosynthesis J. Amesz, A.J. Hoff, H.J. van Gorkum, 2012-12-06 Four decades ago, when Lou Duysens was about to start his work on fluorescence and energy transfer in photosynthesis that would lead to his thesis [1], very little was known about the molecular mechanisms of photosynthesis, certainly from our present-day point of view. However, this state of affairs would rapidly change in the ensuing years by the introduction of modern physical and biochemical

techniques. Especially the field of optical spectroscopy, on which the work of Duysens had such a significant impact, has proved to be one of the most fruitful techniques in the study of primary processes and electron transfer reactions in photosynthesis. Duysens' thesis established the role of energy transfer in photosynthesis and also showed for the first time the existence in photosynthetic bacteria of light-induced absorbance changes of what is now known as the primary electron donor P-870. Subsequent studies by the same method demonstrated the photo-oxidation of cytochromes, both in bacteria [2] and in algae [3,4] and of the absorbance changes [3] that were later found to be due to electrochromic band shifts of antenna pigments. Measurements of cytochrome kinetics in light of various wavelengths led to the concept of two photosystems in green plant photosynthesis [5], whereas a study of the factors affecting the fluorescence yield of chlorophyll gave the first information on the electron acceptor Q of photosystem II [6].

Tibetan Astrology Philippe Cornu, 2002-12-10 Astrology is one of the traditional arts and sciences

of Tibet, where it is known as the science of calculation, used by monks and lamas in the study of the rhythms and cycles of time, for divination, for choosing auspicious times for rituals and life-cycle events such as marriages and funerals, and as an adjunct to the practice of traditional medicine. This comprehensive introduction to the topic includes:

- Historical roots and influences from China and India as well as the Buddhist Kalachakra teachings and the ancient Bön religion of Tibet
- The two main branches of Tibetan astrology: Nagtsi, or black astrology, based on the Chinese system, and Kartsi, or white astrology, derived from Indian astrology
- The twelve- and sixty-year cycles and the twelve animals and five elements associated with them
- The mewa, or magical squares, which are numerological factors used to calculate the auspiciousness of days or years
- The parkha, or eight trigrams of the I Ching, representing the elements, directions, seasons, and fundamental universal forces
- How to analyze the character of hours, days, months, and years, so as to determine auspicious times for various activities
- How to cast and interpret a Tibetan horoscope

Also included are numerous diagrams and charts that are indispensable to the practice of Tibetan astrology,

including tables for converting Western dates to dates on the Tibetan calendar.

Relativity Mpumelelo Paul Grootboom, Presley Chweneyagae, 2006 Contemporary yet epic, this drama explores the underbelly of South African township life when a serial killer begins hunting down young women at night. Exploring moral ambiguity, the play also debunks the myth that people living in poverty and anguish inevitably find refuge in singing and dancing; they can also find it in religious fanaticism and, more damaging, in alcohol, sex, violence, and even murder.

No Boundaries Lillian Hoddeson, 2004 Like any great university, the University of Illinois owes its prominence to the excellence of its faculty. In Lillian Hoddeson's *No Boundaries*, twenty-three scholars provide easily accessible vignettes about University of Illinois faculty who have made major contributions to their fields, to knowledge, and to the world. Here are many of the most inspiring--and often most amusing--people whose work elevated the University of Illinois into a world leader in a variety of areas. Their lives demonstrate again and again that the work of the University takes place as

much away from campus as on it: Oscar Lewis's pioneering studies of poverty in Mexico, for example, Ralph Grim's geological work in Africa, and Nathan Newmark's architectural work in Mexico City. Here also are insights into the remarkable careers of classicist William Oldfather, chemist Roger Adams, the amazing double Nobel Prize-winning physicist John Bardeen, and accounts of Katharine Sharp's work that made the University of Illinois Library into a national treasure. Also included are the legendary contributions of the University of Illinois to computer science, biochemistry, history, literary study, and electronic music.

Viscoelasticity and Rheology Arthur S. Lodge, Michael Renardy, John A. Nohel, 2014-06-28

Viscoelasticity and Rheology covers the proceedings of a symposium by the same title, conducted by the Mathematics Research Center held at the University of Wisconsin-Madison on October 16-18, 1984. The contributions to the symposium are divided into four broad categories, namely, experimental results, constitutive theories, mathematical analysis, and computation. This 16-chapter work begins

with experimental topics, including the motion of bubbles in viscoelastic fluids, wave propagation in viscoelastic solids, flows through contractions, and cold-drawing of polymers. The next chapters covering constitutive theories explore the molecular theories for polymer solutions and melts based on statistical mechanics, the use and limitations of approximate constitutive theories, a comparison of constitutive laws based on various molecular theories, network theories and some of their advantages in relation to experiments, and models for viscoplasticity. These topics are followed by discussions of the existence, regularity, and development of singularities, change of type, interface problems in viscoelasticity, existence for initial value problems and steady flows, and propagation and development of singularities. The remaining chapters deal with the numerical simulation of flow between eccentric cylinders, flow around spheres and bubbles, the hole pressure problem, and a review of computational problems related to various constitutive laws. This book will prove useful to chemical engineers, researchers, and students.

Yvette Galmiche.htm Book Review: Unveiling the Power of Words

In a world driven by information and connectivity, the power of words has become more evident than ever. They have the capability to inspire, provoke, and ignite change. Such may be the essence of the book **Yvette Galmiche.htm**, a literary masterpiece that delves deep to the significance of words and their impact on our lives. Written by a renowned author, this captivating work takes readers on a transformative journey, unraveling the secrets and potential behind every word. In this review, we will explore the book is key themes, examine its writing style, and analyze its overall impact on readers.
