Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Christopher B. Field, Vicente Barros, Thomas F. Stocker, Qin Dahe, 2012-05-28 This Intergovernmental Panel on Climate Change Special Report (IPCC-SREX) explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation. Extreme weather and climate events, interacting with exposed and vulnerable human and natural systems, can lead to disasters. Changes in the frequency and severity of the physical events affect disaster risk, but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability. Some types of extreme weather and climate events have increased in frequency or magnitude, but populations and assets at risk have also increased, with consequences for disaster risk. Opportunities for managing risks of weather- and climate-related disasters exist or can be developed at any scale, local to international. Prepared following strict IPCC procedures, SREX is an invaluable assessment for anyone interested in climate extremes, environmental disasters and adaptation to climate change, including policymakers, the private sector and academic researchers.

Future U.S. Workforce for Geospatial Intelligence National Research Council, Policy and Global Affairs, Board on Higher Education and Workforce, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Future U.S. Workforce for Geospatial Intelligence, 2013-04-28 We live in a changing world with multiple and evolving threats to national security, including terrorism, asymmetrical warfare (conflicts between agents with different military powers or tactics), and social unrest. Visually depicting and assessing these threats using imagery and other geographically-referenced information is the mission of the National Geospatial-Intelligence Agency (NGA). As the nature of the threat evolves, so do the tools, knowledge, and skills needed to respond. The challenge for NGA is to maintain a workforce that can deal with evolving threats to national security, ongoing scientific and technological advances, and changing skills and expectations of workers. Future U.S. Workforce for Geospatial Intelligence assesses the supply of expertise in 10 geospatial intelligence (GEOINT) fields, including 5 traditional areas (geodesy and geophysics, photogrammetry, remote sensing, cartographic science, and geographic information systems and geospatial analysis) and 5 emerging areas that could improve geospatial intelligence (GEOINT fusion, crowdsourcing, human geography, visual analytics, and forecasting). The report also identifies gaps in expertise relative to NGA's needs and suggests ways to ensure an adequate supply of geospatial intelligence expertise over the next 20 years.

Toxicological Profile for Carbon Monoxide U.S. Department of Health and Human Services, 2014-01-22 This toxicological profile is prepared in accordance with guidelines developed by the Agency for Toxic Substances and Disease Registry (ATSDR) and the Environmental Protection Agency (EPA). The original guidelines were published in the Federal Register on April 17, 1987. Each profile will be revised and republished as necessary. The ATSDR toxicological profile succinctly characterizes the toxicologic and adverse health effects information for the toxic substances each profile describes. Each peer-reviewed profile identifies and reviews the key literature that describes a substance's toxicologic properties. Other pertinent literature is also presented but is described in less detail than the key studies. The profile is not intended to be an exhaustive document; however, more comprehensive sources of specialty information are referenced. The profiles focus on health and toxicologic information; therefore, each toxicological profile begins with a public health statement that describes, in nontechnical language, a substance's relevant toxicological properties. Following the public health statement is information concerning levels of significant human exposure and, where known, significant health effects. A health effects summary describes the adequacy of information to determine a substance's health effects. ATSDR identifies data needs that are significant to protection of public health. Each profile: (A) Examines, summarizes, and interprets available toxicologic information and epidemiologic evaluations on a toxic substance to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects; (B) Determines whether adequate information on the health effects of each substance is available or being developed to determine levels of exposure that present a significant risk to human health of acute, subacute, and chronic health effects; and (C) Where appropriate, identifies toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans.

Exploding the Phone Phil Lapsley, 2013-02-05 "A rollicking history of the telephone system and the hackers who exploited its flaws." —Kirkus Reviews, starred review Before smartphones, back even before the Internet and personal computers, a misfit group of technophiles, blind teenagers, hippies, and outlaws figured out how to hack the world's largest machine: the telephone system. Starting with Alexander Graham Bell's revolutionary "harmonic telegraph," by the middle of the twentieth century the phone system had grown into something extraordinary, a web of cutting-edge switching machines and human operators that linked together millions of people like never before. But the network had a billion-dollar flaw, and once people discovered it, things would never be the same. Exploding the Phone tells this story in full for the first time. It traces the birth of long-distance communication and the telephone, the rise of AT&T's monopoly, the creation of the sophisticated machines that made it all work, and the discovery of Ma Bell's Achilles' heel. Phil Lapsley expertly weaves together the clandestine underground of "phone phreaks" who turned the network into their electronic playground, the mobsters who exploited its flaws to avoid the feds, the explosion of telephone hacking in the counterculture, and the war between the

phreaks, the phone company, and the FBI. The product of extensive original research, *Exploding the Phone* is a groundbreaking, captivating book that “does for the phone phreaks what Steven Levy’s *Hackers* did for computer pioneers” (Boing Boing). “An authoritative, jaunty and enjoyable account of their sometimes comical, sometimes impressive and sometimes disquieting misdeeds.” –The Wall Street Journal “Brilliantly researched.” –The Atlantic “A fantastically fun romp through the world of early phone hackers, who sought free long distance, and in the end helped launch the computer era.” –The Seattle Times

The second edition of the book therefore considerably expands with the addition of three new chapters relating to Bayesian models, Generalized linear and nonlinear mixed effects models, and Principles of simulation. In addition, many of the other chapters have been expanded and updated.

Painting Dublin, 1886–1949 Kathryn Milligan, 2020-12-06 Delving into a hitherto unexplored aspect of Irish art history, *Painting Dublin, 1886–1949* examines the depiction of Dublin by artists from the late-nineteenth to the mid-twentieth century. Artists’ representations of the city have long been markers of civic pride and identity, yet in Ireland such artworks have been overlooked in favour of the rural and pastoral. Framed by the shift from city of empire to capital of an independent republic, this book examines artworks by Walter Osborne, Rose Barton, Jack B. Yeats, Harry Kernoff, Estella Solomons and Flora Mitchell, encompassing a variety of urban views and artistic themes. While Dublin is already renowned for its representation in literature, this book will demonstrate the many attractions it held for Ireland’s artists, offering a vivid visualisation of the city’s streets and inhabitants at a crucial time in its history.

Discovery and Synthesis of Crop Protection Products Peter Maienfisch, Thomas M. Stevenson, 2016-06-29 Modern agribusiness is one of the main generators of employment and income worldwide and plays a vital role in improving the production, quality, and quantity of food, feed, fiber, and fuel ensuring our world has the safest and most nutritious, abundant, and sustainable food supply possible. The global agribusiness industry with its offerings such as insecticides, herbicides, and fungicides as well as biotechnology products contributes to growing public expectations for food security and agricultural sustainability while addressing the industry's global challenges, such as population growth and rising caloric consumption, increasing environmental stresses across the globe, a changing regulatory landscape, development of resistance to existing active ingredients and traits by investing in effective R&D programs and inventing new solutions. The book provides an update on state of the art crop protection research and highlights the pivotal role of novel chemistries for modern crop protection. Recent research and new directions in the synthesis and chemistry of agrochemicals, as well as new research approaches, tools and directions in the crop protection field including nematicides, biologicals and natural products are described and details on the design, synthesis, biology and/or structure-activity relationships of a series of new chemical entities targeting fungicides, insecticides, herbicides and nematicides provided. Furthermore future directions for advancing research and regulation of agricultural chemistry and pest management science, promoting public health, and preserving environmental quality are covered as well.
