Relieving Pain in America Institute of Medicine, Board on Health Sciences Policy, Committee on Advancing Pain Research, Care, and Education, 2011-10-26 Chronic pain costs the nation up to \$635 billion each year in medical treatment and lost productivity. The 2010 Patient Protection and Affordable Care Act required the Department of Health and Human Services (HHS) to enlist the Institute of Medicine (IOM) in examining pain as a public health problem. In this report, the IOM offers a blueprint for action in transforming prevention, care, education, and research, with the goal of providing relief for people with pain in America. To reach the vast multitude of people with various types of pain, the nation must adopt a population-level prevention and management strategy. The IOM recommends that HHS develop a comprehensive plan with specific goals, actions, and timeframes. Better data are needed to help shape efforts, especially on the groups of people currently underdiagnosed and undertreated, and the IOM encourages federal and state agencies and private organizations to accelerate the collection of data on pain incidence, prevalence, and treatments. Because pain varies from patient to patient, healthcare providers should increasingly aim at tailoring pain care to each person's experience, and self-management of pain should be promoted. In addition, because there are major gaps in knowledge about pain across health care and society alike, the IOM recommends that federal agencies and other stakeholders redesign education programs to bridge these gaps. Pain is a major driver for visits to physicians, a major reason for taking medications, a major cause of disability, and a key factor in quality of life and productivity. Given the burden of pain in human lives, dollars, and social consequences, relieving pain should be a national priority.

A History of Greek Art Mark D. Stansbury-O'Donnell, 2015-01-27 Offering a unique blend of thematic and chronological investigation, this highly illustrated, engaging text explores the rich historical, cultural, and social contexts of 3,000 years of Greek art, from the Bronze Age through the Hellenistic period. Uniquely intersperses chapters devoted to major periods of Greek art from the Bronze Age through the Hellenistic period, with chapters containing discussions of important contextual themes across all of the periods Contextual chapters illustrate how a range of factors, such as the urban environment, gender, markets, and cross-cultural contact, influenced the development of art Chronological chapters survey the

appearance and development of key artistic genres and explore how artifacts and architecture of the time reflect these styles Offers a variety of engaging and informative pedagogical features to help students navigate the subject, such as timelines, theme-based textboxes, key terms defined in margins, and further readings. Information is presented clearly and contextualized so that it is accessible to students regardless of their prior level of knowledge A book companion website is available at www.wiley.com/go/greekart with the following resources: PowerPoint slides, glossary, and timeline

Introduction to Controlled Vocabularies Patricia Harpring, 2010-04-13 This detailed book is a “how-to” guide to building controlled vocabulary tools, cataloging and indexing cultural materials with terms and names from controlled vocabularies, and using vocabularies in search engines and databases to enhance discovery and retrieval online. Also covered are the following: What are controlled vocabularies and why are they useful? Which vocabularies exist for cataloging art and cultural objects? How should they be integrated in a cataloging system? How should they be used for indexing and for retrieval? How should an institution construct a local authority file? The links in a controlled vocabulary ensure that relationships are defined and maintained for both cataloging and retrieval, clarifying whether a rose window and a Catherine wheel are the same thing, or how pot-metal glass is related to the more general term stained glass. The book provides organizations and individuals with a practical tool for creating and implementing vocabularies as reference tools, sources of documentation, and powerful enhancements for online searching.

Autonomous Horizons Greg Zacharias, 2019-04-05 Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.

Better Policing With Microsoft Office Mark A. Stallo, Christopher W. Bruce, 2005-09-19 This book demonstrates how to use Access, Excel, Word, PowerPoint and Outlook to become more effective and efficient in law enforcement applications. The examples presented in this book concentrate on crime analysis and other police functions. The exercises solve real world problems in law enforcement, using fictional data. The book has been designed for a 40 hour seminar or a semester long college course. College or university faculty are encouraged to review the book for use in a crime analysis and other law enforcement application courses.

The Trauma Manual Andrew B. Peitzman, Michael Rhodes, C. William Schwab, 2008 The thoroughly updated Third Edition of this popular and widely used pocket reference guides the trauma team through every aspect of patient care after injury and before, during, and after acute care surgery—from prehospital care, to resuscitation, treatment of specific organ injuries, priorities in intensive care, and management of special situations. Designed for rapid, on-the-spot information retrieval, this manual will be a staple reference in emergency departments and trauma centers. Flow charts, algorithms, sequential lists, and tables throughout facilitate quick clinical decision-making. More than 200 illustrations demonstrate specific injuries and procedures. Appendices include organ injury scales, tetanus prophylaxis recommendations, and frequently used forms.
