Personalized Learning Peggy Grant, Dale Basye, 2014-06-21 *Personalized Learning: A Guide for Engaging Students with Technology* is designed to help educators make sense of the shifting landscape in modern education. While changes may pose significant challenges, they also offer countless opportunities to engage students in meaningful ways to improve their learning outcomes. Personalized learning is the key to engaging students, as teachers are leading the way toward making learning as relevant, rigorous, and meaningful inside school as outside and what kids do outside school: connecting and sharing online, and engaging in virtual communities of their own. Renowned author of the *Heck: Where the Bad Kids Go* series, Dale Basye, and award winning educator Peggy Grant, provide a go-to tool available to every teacher today—technology as a way to ‘personalize’ the education experience for every student, enabling students to learn at their various paces and in the way most appropriate to their learning styles.

Pathways for Peace United Nations;World Bank,2018-04-13 Violent conflicts today are complex and increasingly protracted, involving more nonstate groups and regional and international actors. It is estimated that by 2030—the horizon set by the international community for achieving the Sustainable Development Goals—more than half of the world's poor will be living in countries affected by high levels of violence. Information and communication technology, population movements, and climate change are also creating shared risks that must be managed at both national and international levels. Pathways for Peace is a joint United Nations+“World Bank Group study that originates from the conviction that the international community's attention must urgently be refocused on prevention. A scaled-up system for preventive action would save between US\$5 billion and US\$70 billion per year, which could be reinvested in reducing poverty and improving the well-being of populations. The study aims to improve the way in which domestic development processes interact with security, diplomacy, mediation, and other efforts to prevent conflicts from becoming violent. It stresses the importance of grievances related to exclusion—from access to power, natural resources, security and justice, for example—that are at the root of many violent conflicts today. Based on a review of cases in which prevention has been successful, the study makes recommendations for countries facing emerging risks of violent conflict as well as for the international community. Development policies and programs must be a core part of preventive efforts; when risks are high or building up, inclusive solutions through dialogue, adapted macroeconomic policies, institutional reform, and redistributive policies are required. Inclusion is key, and preventive action needs to adopt a more people-centered approach that includes mainstreaming citizen engagement. Enhancing the participation of women and youth in decision making is fundamental to sustaining peace, as well as long-term policies to address the aspirations of women and young people.

Global Infectious Disease Surveillance and Detection Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2007-11-11 Early detection is essential to the control of emerging, reemerging, and novel infectious diseases, whether naturally occurring or intentionally introduced. Containing the spread of such diseases in a profoundly interconnected world requires active vigilance for signs of an outbreak, rapid recognition of its presence, and diagnosis of its microbial cause, in addition to strategies and resources for an appropriate and efficient response. Although these actions are often viewed in terms of human public health, they also challenge the plant and animal health communities. Surveillance, defined as the continual scrutiny of all aspects of occurrence and spread of a disease that are pertinent to effective control, involves the systematic collection, analysis, interpretation, and dissemination of health data. Disease detection and diagnosis is the act of discovering a novel, emerging, or reemerging disease or disease event and identifying its cause. Diagnosis is the cornerstone of effective disease control and prevention efforts, including surveillance. Disease surveillance and detection relies heavily on the astute individual: the clinician, veterinarian, plant pathologist, farmer, livestock manager, or agricultural extension agent who notices something unusual, atypical, or suspicious and brings this discovery in a timely way to the attention of an appropriate representative of human public health, veterinary medicine, or agriculture. Most developed countries have the ability to detect and diagnose human, animal, and plant diseases. *Global Infectious Disease Surveillance and Detection: Assessing the Challenges-Finding Solutions, Workshop Summary* is part of a 10 book series and summarizes the recommendations and presentations of the workshop.
