The Social Sciences in the Asian Century Carol Johnson, Vera Mackie, Tessa Morris-Suzuki, 2015-09-30 In this collection of essays, we reflect on what it means to practise the social sciences in the twenty-first century. The book brings together leading social scientists from the Asia-Pacific region. We argue for the benefit of dialogue between the diverse theories and methods of social sciences in the region, the role of the social sciences in addressing real-world problems, the need to transcend national boundaries in addressing regional problems, and the challenges for an increasingly globalised higher education sector in the twenty-first century. The chapters are a combination of theoretical reflections and locally focused case studies of processes that are embedded in global dynamics and the changing geopolitics of knowledge. In an increasingly connected world, these reflections will be of global relevance.

Designing Greenways Paul Cawood Hellmund, Daniel Smith, 2013-03-05 How are greenways designed? What situations lead to their genesis, and what examples best illustrate their potential for enhancing communities and the environment? Designing greenways is a key to protecting landscapes, allowing wildlife to move freely, and finding appropriate ways to bring people into nature. This book brings together examples from ecology, conservation biology, aquatic ecology, and recreation design to illustrate how greenways function and add value to ecosystems and human

communities alike. Encompassing everything from urban trail corridors to river floodplains to wilderness-like linkages, greenways preserve or improve the integrity of the landscape, not only by stemming the loss of natural features, but also by engendering new natural and social functions. From 19th-century parks and parkways to projects still on the drawing boards, *Designing Greenways* is a fascinating introduction to the possibilities-and pitfalls-involved in these ambitious projects. As towns and cities look to greenways as a new way of reconciling man and nature, designers and planners will look to *Designing Greenways* as an invaluable compendium of best practices.

Asean and Asean Plus Three Markus Hund,2007 East Asia is a region undergoing vast structural changes. As the region moved closer together economically and politically following the breakdown of the bipolar world order and the ensuing expansion of intra-regional interdependencies, the states of the region faced the challenge of having to actively recast their mutual relations. At the same time, throughout the 1990s, the West became increasingly interested in trans- and inter-regional dialogue and cooperation with the emerging economies of East Asia. These developments gave rise to a new regionalism, which eventually also triggered debates on Asian identities and the region's potential to integrate. Before this backdrop, this thesis analyses in how far both the Association of Southeast Asian Nations (ASEAN) and the ASEAN Plus Three forum (APT: the ASEAN states plus China, Japan and South Korea) represent intergovernmental manifestations of specific collective identities in Southeast Asia and East Asia, respectively. Based on profiles of the respective discursive, behavioral and motivational patterns as well as the integrative potential of ASEAN and APT, this study establishes in how far the member states adhere to sustainable collective patterns of interaction, expectations and objectives, and assesses in how far they can be said to form specific 'ingroups'. Four studies on collective norms, readiness to pool sovereignty, solidarity and attitudes vis--vis relevant

third states show that ASEAN is firmly grounded in a certain grown collective identity, though its political relevance is frequently thwarted by changes in its external environment. A study on the cooperative and integrative potential of APT yields no manifest evidence of an incipient or ongoing pan-East Asian identity formation process.

Pakistan and a World in Disorder Javid Husain, 2016-05-20 This book delineates the role that Pakistan should play in the largely anarchic world of the twenty-first century in order to best serve the country's long-term national interests. Its main aim is to lay down the parameters within which Pakistan's grand strategy should be formulated, taking into account the evolving global and regional security environment and Pakistan's historical experience. Provided here is an in-depth analysis and critical evaluation of the past record of Pakistan's foreign policy within this context, bringing out its successes and failures, strengths and weaknesses. Based on these analyses, a comprehensive approach is recommended for safeguarding Pakistan's national security and promoting its prosperity utilizing a strategy that is a marked departure from the military-dominated, uni-dimensional policies the country has followed thus far. Besides providing guidelines to Pakistan's policy makers and intelligentsia, this book will be of interest to academics, foreign observers, and general readers in understanding the constraints and parameters within which Pakistan – a de facto nuclear-weapon state of 190 million people at the cross-roads of South Asia, Central Asia, and the Persian Gulf – must operate to safeguard its national interests in the turbulent times ahead.

The Digital Silk Road Jonathan E. Hillman, 2021-10-19 An expert on China's global infrastructure expansion provides an urgent look at the battle to connect and control tomorrow's networks. From the ocean floor to outer space, China's Digital Silk Road aims to wire the world and rewrite the global order. Taking readers on a journey inside China's surveillance state, rural America, and Africa's megacities, Jonathan Hillman reveals what China's expanding digital footprint looks like on the ground and explores the economic and strategic consequences of a future in which all routers lead to Beijing. If China becomes the world's chief network operator, it could reap a commercial and strategic windfall, including many advantages currently enjoyed by the United States. It could reshape global flows of data, finance, and communications to reflect its interests. It could possess an unrivaled understanding of market movements, the deliberations of foreign competitors, and the lives of countless individuals enmeshed in its networks. However, China's digital dominance is not yet assured. Beijing remains vulnerable in several key dimensions, the United States and its allies have an opportunity to offer better alternatives, and the rest of the world has a voice. But winning the battle for tomorrow's networks will require the United States to innovate and take greater risks in emerging markets. Networks create large winners, and this is a contest America cannot afford to lose.
