Choice "If you want to understand how cultures come into being, endure, and change, then you need to come to terms with the rich and often surprising history Of the book ... Eliot and Rose have done a fine job. Their volume can be heartily recommended. " Adrian Johns, Technology and Culture From the early Sumerian clay tablet through to the emergence of the electronic text, this Companion provides a continuous and coherent account of the history of the book. A team of expert contributors draws on the latest research in order to offer a cogent, transcontinental narrative. Many of them use illustrative examples and case studies of well-known texts, conveying the excitement surrounding this rapidly developing field. The Companion is organized around four distinct approaches to the history of the book. First, it introduces the variety of methods used by book historians and allied specialists, from the long-established discipline of bibliography to newer IT-based approaches. Next, it provides a broad chronological survey of the forms and content of texts. The third section situates the book in the context of text culture as a whole, while the final section addresses broader issues, such as literacy, copyright, and the future of the book. Behavioral Neuroscience Carl W. Cotman,James L McGaugh,2014-04-24 Behavioral Neuroscience: An Introduction provides a basic understanding of what is known about the means by which neurons communicate and about the nervous system which interprets, integrates, and transmits signals into meaningful and appropriate behaviors. The book starts with an overview of the nervous system. The text then describes the general operation and organization of the nervous system; and some of the major types of neurons in the context of their systems. The basic characteristics of neurons and how they communicate; the processes and the basic integrative properties of defined groups of neurons; and complex learning and memory are also considered. The book further tackles the auditory, somesthetic, olfactory, gustatory, visual, and motor systems; the functions of the autonomic nervous system and the neuroendocrine system; and the neural basis of two types of motivated behavior, drinking and feeding. The text also encompasses sleep and activity rhythms; the development of the neural circuitry and its plasticity throughout life; and the development of behavior. Behavioral disorders and the aspects of the human nervous system which make man unique among all living creatures are also looked into. Behavioral psychologists, behavioral neuroscientists, and psychobiologists will find the book invaluable.
