Future U.S. Workforce for Geospatial Intelligence National Research Council, Policy and Global Affairs, Board on Higher Education and Workforce, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Future U.S. Workforce for Geospatial Intelligence, 2013-04-28 We live in a changing world with multiple and evolving threats to national security, including terrorism, asymmetrical warfare (conflicts between agents with different military powers or tactics), and social unrest. Visually depicting and assessing these threats using imagery and other geographically-referenced information is the mission of the National Geospatial-Intelligence Agency (NGA). As the nature of the threat evolves, so do the tools, knowledge, and skills needed to respond. The challenge for NGA is to maintain a workforce that can deal with evolving threats to national security, ongoing scientific and technological advances, and changing skills and expectations of workers. *Future U.S. Workforce for Geospatial Intelligence* assesses the supply of expertise in 10 geospatial intelligence (GEOINT) fields, including 5 traditional areas (geodesy and geophysics, photogrammetry, remote sensing, cartographic science, and geographic information systems and geospatial analysis) and 5 emerging areas that could improve geospatial intelligence (GEOINT fusion, crowdsourcing, human geography, visual analytics, and forecasting). The report also identifies gaps in expertise relative to NGA's needs and suggests ways to ensure an adequate supply of geospatial intelligence expertise over the next 20 years.

Investigating Cryptocurrencies Nick Furneaux, 2018-05-10 Investigate crimes involving cryptocurrencies and other blockchain technologies Bitcoin has traditionally been the payment system of choice for a criminal trading on the Dark Web, and now many other blockchain cryptocurrencies are entering the mainstream as traders are accepting them from low-end investors putting their money into the market. Worse still, the blockchain can even be used to hide information and covert messaging, unknown to most investigators. *Investigating Cryptocurrencies* is the first book to help corporate, law enforcement, and other investigators understand the technical concepts and the techniques for investigating crimes utilizing the blockchain and related digital currencies such as Bitcoin and Ethereum. Understand blockchain and transaction technologies Set up and run cryptocurrency accounts Build information about specific addresses Access raw data on blockchain ledgers Identify users of cryptocurrencies Extracting cryptocurrency data from live and imaged computers Following the money With nearly \$150 billion in cryptocurrency circulating and \$3 billion changing hands daily, crimes committed with or paid for with digital cash are a serious business. Luckily, *Investigating Cryptocurrencies Forensics* shows you how to detect it and, more importantly, stop it in its tracks.

Health Financing Policy Cheryl Cashin, 2016-02-24 The global movement toward universal health coverage (UHC) is accompanied by requests for large increases in government health spending in some countries. This combined with the global economic situation and stagnant economic growth across many low- and middle-income countries make it more critical than ever to place health financing discussions firmly in the context of macroeconomic and fiscal realities. Unfortunately, there is often a disconnect in decision making, with key fiscal decisions made in the absence of a clear understanding on the one hand of the potential consequences for the health sector, and on the other, the consequences for the country's macroeconomic and fiscal position of increasing or reallocating government spending. Constructive health financing policy dialogue aims to reach a common understanding between health sector leaders and central budget authorities about policy objectives for the health sector and the resources needed to achieve those objectives, how much priority will be given to health in the

government budget, and how the health sector will be held accountable for using funds effectively. This common understanding should be built on a realistic picture of the country's macroeconomic and fiscal context, the constraints and competing priorities in the budget-setting process. When ministries of health and ministries of finance have a common understanding of macroeconomic and fiscal constraints, discussions can focus productively on using funds within the potential health resource envelope in the most effective way to achieve health system objectives. This guidance note outlines the key components of the macroeconomic, fiscal, and public financial management context that need to be considered for an informed health financing discussion at the country level. The guidance note is organized around four sets of questions that are key to placing the health financing dialogue in the context of a country's macroeconomic and fiscal context. Each section points to measures, resources, and analytical tools that are available to assist in answering these questions for a specific country. The guidance note draws on case studies from 11 countries moving toward or sustaining universal health coverage conducted as part of the Japan†World Bank Partnership Program on UHC as well as from other country examples.

Characterisation of Ferroelectric Bulk Materials and Thin Films Markys G. Cain, 2014-06-02 This book presents a comprehensive review of the most important methods used in the characterisation of piezoelectric, ferroelectric and pyroelectric materials. It covers techniques for the analysis of bulk materials and thick and thin film materials and devices. There is a growing demand by industry to adapt and integrate piezoelectric materials into ever smaller devices and structures. Such applications development requires the joint development of reliable, robust, accurate and – most importantly – relevant and applicable measurement and characterisation methods and models. In the past few years there has been a rapid development of new techniques to model and measure the variety of properties that are deemed important for applications development engineers and scientists. The book has been written by the leaders in the field and many chapters represent established measurement best practice, with a strong emphasis on application of the methods via worked examples and detailed experimental procedural descriptions. Each chapter contains numerous diagrams, images, and measurement data, all of which are fully referenced and indexed. The book is intended to occupy space in the research or technical lab, and will be a valuable and practical resource for students, materials scientists, engineers, and lab technicians.

Asian Students in Germany Béatrice Knerr (Hrsg.), 2015-01-01 For decades Germany has been one of the major host countries for international students; at the wake of the 21st century the vast majority comes from Asian countries. With increasing international competition the students, their countries of origin as

well as Germany are confronted with specific challenges associated with sometimes conflicting plans, expectations, and apprehensions, amplified by uncertainties. While the students try to adapt to the conditions in Germany to make the best of their stay, their countries of origin ask whether the resources spent on the studies abroad of their nationals are well-invested, and how they might re-attract those who are graduates. As a partaker in the “global race for talents” Germany, finally, questions how it might retain those qualified in highly demanded subjects after their graduation. By contributing to answering these questions, this volume is relevant for all of these stakeholders. Beatrice Knerr is a professor at the University of Kassel (Germany) where she heads the Department of Development Economics, Migration and Agricultural Policy (DEMAP). She holds a PhD degree from Kiel University and received her habilitation from the University of Stuttgart/Hohenheim. Among her publications are ten monographs and edited and co-edited books, and around fifty articles and book chapters on labor migration and mobility. Among the co-authors are Zhao Xi, Tingting Ma, Rebecca Tlatlik, Sudeh Dehnavi, Robert Sibarani, Wildan Syafitri, Ranjita Nepal and Sadaf Mahmood who were all PhD students at DEMAP at the time of the survey activities. Most of them have graduated since then and have returned to their home countries; others have opted to stay in Germany or to move on to a third country.

Multiple Imputation for Nonresponse in Surveys Donald B. Rubin, 2009-09-25 Demonstrates how nonresponse in sample surveys and censuses can be handled by replacing each missing value with two or more multiple imputations. Clearly illustrates the advantages of modern computing to such handle surveys, and demonstrates the benefit of this statistical technique for researchers who must analyze them. Also presents the background for Bayesian and frequentist theory. After establishing that only standard complete-data methods are needed to analyze a multiply-imputed set, the text evaluates procedures in general circumstances, outlining specific procedures for creating imputations in both the ignorable and nonignorable cases. Examples and exercises reinforce ideas, and the interplay of Bayesian and frequentist ideas presents a unified picture of modern statistics.

Shaping Sustainable Fashion Alison Gwilt, Timo Rissanen, 2012-06-25 The production, use and eventual disposal of most clothing is environmentally damaging, and many fashion and textile designers are becoming keen to employ more sustainable strategies in their work. This book provides a practical guide to the ways in which designers are creating fashion with less waste and greater durability. Based on the results of extensive research into lifecycle approaches to sustainable fashion, the book is divided into four sections: source: explores the motivations for the selection of materials for fashion garments and suggests that garments can be made from materials that also assist in the management of textile waste make: discusses the differing approaches to the design and manufacture of sustainable fashion garments that can also provide the opportunity for waste control and minimization use: explores schemes that encourage the consumer to engage in slow fashion consumption last: examines alternative solutions to the predictable fate of most garments – landfill. Illustrated throughout with case studies of best practice from international designers and fashion labels and written in a practical, accessible style, this is a must-have guide for fashion and textile designers and students in their areas.
