War Photographs Taken on the Battlefields of the Civil War

Mathew B. Brady,Alexander Gardner,2013-06-01 Fought over the course of four years, the Civil War pitted countrymen against countrymen, North versus South, friend against friend, and brother against brother. The photographs within these pages document the war that united America as one. These rare shots were taken in the middle of the battlefield during the earliest

days of photography. Selected from a collection of seven thousand original negatives, these historic photos capture nearly every aspect of Civil War life. Among these photos are images of camps sprawling across acres, soldiers at their battlements, firing of heavy artillery, the aftermath of battle, and the terror that these young men faced. See first-hand of Union and Confederate officers strategizing their next moves, and Abraham Lincoln addressing his Union commanders. Originally released from the private collection of Edward Bailey Eaton in 1907, this edition is a must have for any Civil War buff or historian. No collection can be considered complete without these photographs by Matthew Brady and Alexander Gardner, as well as the meticulous passages that put the images in illuminating context.

### **Using Sequence Generator Pro and Friends** Alex

McConahay, 2019-09-10 This guide is specifically aimed at those who are using—or want to use—Sequence Generator Pro. SGP is a “session management” software package that controls the telescope, mount, camera, and ancillary equipment to target and secure images during a night of imaging astronomical objects. The book begins with a special tutorial to get up and running with SGP. With a comprehensive reference section, it takes the user in detail through the various aspects of user and equipment profiles, equipment definitions, the sequencer, and other essential elements of SGP. Finally, it focuses on how to get the most out of the ancillary programs—target databases, autoguider, plate solvers, planetarium software, and other applications. Oftentimes, technical guides can end up being far denser than the processes they intend to explain. Many of the insights provided by SGP expert Alex McConahay are beyond what can be found in the official program documentation. In this book, the reader will find in-depth, yet straightforward practical advice on how to automate nightly astroimaging sessions with Sequence Generator Pro.

### **Comparing Health-related Policies & Practices in Sports**

Christopher Deubert, Holly Fernandez Lynch, I. Cohen, 2017-05-09 This comprehensive report, published as part of the Football Players Health Study at Harvard University, highlights areas in which the player health related policies and practices of the NFL could potentially be improved by considering steps taken by other professional sports leagues. While the report concludes that the NFL's player health provisions are generally the most protective of player health among the relevant comparators, there are still important opportunities for improvement. The report is unprecedented both in scope and focus. This is the first comprehensive comparison of the health-related policies and practices of elite professional sports leagues: the National

Football League (NFL); Major League Baseball (MLB); National Basketball Association (NBA); National Hockey League (NHL); Canadian Football League (CFL); and, Major League Soccer (MLS). After analyzing the leagues, the report compares each one to the NFL on the following health-related issues: (1) Club Medical Personnel (including discussion of conflicts of interest); (2) Injury Rates and Policies (including detailed comparisons of concussion rates); (3) Health-Related Benefits (including health insurance and retirement benefits for current and former players); (4) Drug and Performance-Enhancing Substance Policies; (5) Compensation (including guaranteed compensation); and, (6) Eligibility Rules (including discussion of the readiness of athletes for professional play). The areas in which the NFL can potentially learn from other leagues are: 1. Pre-season physicals performed by a neutral physician (CFL). 2. Concussion-specific short-term injury list (MLB). 3. Injury reporting policies that do not require disclosure of the location of a player's injury (MLB, NHL, and CFL). 4. Health insurance to players for life (MLB, NBA, and NHL). 5. Retirement plan payments higher than the NFL (MLB, NBA, and NHL). 6. Players vested in pension plans on their first day in the league (MLB and NHL). 7. Treatment for players who violated performance-enhancing substance policies (NBA and CFL). 8. More guaranteed compensation than in the NFL (MLB, NBA, and NHL). 9. Less restrictive eligibility rules (MLB, NBA, NHL, and MLS).

*Status of Accelerator Driven Systems Research and Technology Development* International Atomic Energy Agency, 2015 One of the greatest challenges for nuclear energy is how to properly manage the highly radioactive waste generated during irradiation in nuclear reactors. Accelerator Driven Systems (ADSs) may offer new prospects and advantages for the transmutation of such high level nuclear waste. ADS or accelerator driven transmutation of waste (ATW) consists of a high power proton accelerator, a heavy metal spallation target

that produces neutrons when bombarded by the high power beam, and a sub-critical core that is neutronically coupled to the spallation target. This publication provides a comprehensive state of the art of the ADS technology by representing the different ADS concepts proposed worldwide in the last 15 years, as well as the related R&D activities and demonstration initiatives carried out at national international level.
