The Blood Bankers James S Henry, 2014-12-16 Like tentacles on a vast octopus, the firsthand investigations in The Blood Bankers all lead to one core. A financial detective of

sorts, investigative journalist Jim Henry analyzes a range of scandals, including the looting of the Philippines by the Marcos family and the financial collapse of nations throughout the developing world. A rogues' gallery of international criminals owes its existence to the dramatic growth of the underground global economy over the last two decades. Our world is being reshaped, often in sinister fashion, by wide open capital markets and an international banking network that exists to launder hundreds of billions of dollars in ill-gotten gains. Here is an inside look at globalization's dark side—the new high growth global markets for influence-peddling, capital flight, money laundering, weapons, drugs, tax evasion, child labor, illegal immigration, and other forms of transnational crime.

Anthem Ayn Rand,2021-07-07 About this Edition This 2021-2022 Digital Student Edition of Ayn Rand's Anthem was created for teachers and students receiving free novels from the Ayn Rand Institute, and includes a historic Q&A with Ayn Rand that cannot be found in any other edition of Anthem. In this Q&A from 1979, Rand responds to questions about Anthem sent to her by a high school classroom. About Anthem Anthem is Ayn Rand's "hymn to man's ego." It is the story of one man's rebellion against a totalitarian, collectivist

society. Equality 7-2521 is a young man who yearns to understand “the Science of Things.” But he lives in a bleak, dystopian future where independent thought is a crime and where science and technology have regressed to primitive levels. All expressions of individualism have been suppressed in the world of Anthem; personal possessions are nonexistent, individual preferences are condemned as sinful and romantic love is forbidden. Obedience to the collective is so deeply ingrained that the very word “I” has been erased from the language. In pursuit of his quest for knowledge, Equality 7-2521 struggles to answer the questions that burn within him — questions that ultimately lead him to uncover the mystery behind his society’s downfall and to find the key to a future of freedom and progress. Anthem anticipates the theme of Rand’s first best seller, The Fountainhead, which she stated as “individualism versus collectivism, not in politics, but in man’s soul.”

Natural Intelligence for Scheduling, Planning and Packing Problems Raymond Chiong, Sandeep Dhakal, 2009-09-30 Scheduling, planning and packing are ubiquitous problems that can be found in a wide range of real-world settings. These problems transpire in a large variety of forms, and have enormous socio-economic impact. For many years, significant work has been devoted to automating the processes of scheduling, planning and packing using different kinds of methods. However, poor scaling and the lack of flexibility of many of the conventional methods coupled with the fact that most of the real-world problems across the application areas of scheduling, planning and packing nowadays tend to be of large scale, dynamic and full of complex dependencies have made it necessary to tackle them in unconventional ways. This volume, Natural Intelligence for Scheduling, Planning and Packing Problems, is a collection of numerous natural intelligence based

approaches for solving various kinds of scheduling, planning and packing problems. It comprises 12 chapters which present many methods that draw inspiration from nature, such as evolutionary algorithms, neural-fuzzy system, particle swarm algorithms, ant colony optimisation, extremal optimisation, raindrop optimisation, and so on. Problems addressed by these chapters include freight transportation, job shop scheduling, flowshop scheduling, electrical load forecasting, vehicle routing, two-dimensional strip packing, network configuration and forest planning, among others. Along with solving these problems, the contributing authors present a lively discussion of the various aspects of the nature-inspired algorithms utilised, providing very useful and important new insights into the research areas.

The Hundred Days (Vol. Book 19) (Aubrey/Maturin Novels) Patrick O'Brian,2011-12-05 One of the best novelists since Jane Austen....The Hundred Days may be the best installment yet....I give O'Brian's fans joy of it.—Philadelphia Inquirer Napoleon, escaped from Elba, pursues his enemies across Europe like a vengeful phoenix. If he can

corner the British and Prussians before their Russian and Austrian allies arrive, his genius will lead the French armies to triumph at Waterloo. In the Balkans, preparing a thrust northwards into Central Europe to block the Russians and Austrians, a horde of Muslim mercenaries is gathering. They are inclined toward Napoleon because of his conversion to Islam during the Egyptian campaign, but they will not move without a shipment of gold ingots from Sheik Ibn Hazm which, according to British intelligence, is on its way via camel caravan to the coast of North Africa. It is this gold that Jack Aubrey and Stephen Maturin must at all costs intercept. The fate of Europe hinges on their desperate mission. The Hundred Days is certain to delight O'Brian's fans, for whom happiness is an unending stream of Aubrey/Maturin books....[It] is a fine novel that stands proudly on the shelf with the others.—Los Angeles Times

Optimized Cloud Based Scheduling Rong Kun Jason Tan,John A. Leong,Amandeep S. Sidhu,2018-02-24 This book presents an improved design for service provisioning and allocation models that are validated through running genome sequence assembly tasks in a hybrid cloud environment. It proposes approaches for addressing scheduling and performance issues in big data analytics and showcases new algorithms for hybrid cloud

scheduling. Scientific sectors such as bioinformatics, astronomy, high-energy physics, and Earth science are generating a tremendous flow of data, commonly known as big data. In the context of growing demand for big data analytics, cloud computing offers an ideal platform for processing big data tasks due to its flexible scalability and adaptability. However, there are numerous problems associated with the current service provisioning and allocation models, such as inefficient scheduling algorithms, overloaded memory overheads, excessive node delays and improper error handling of tasks, all of which need to be addressed to enhance the performance of big data analytics.
