Northern Plains Native Americans Shane Balkowitsch,2023-10-17 North Dakotan Shane Balkowitsch's quest to take 1000 Native American wet-plates portraits in the present day is one step closer with this second volume. In this series of wet-plate collodion book of portraits of Northern Plains Native Americans, the photographer/author continues with his distinctive and unique presentation that is the only one to have ever been instigated or created for this particular group of Native Americans. The technique he uses, wet-plate collodion and the eye of the author align to present a masterful, unique, and respectful array that is sumptuous and compelling. Here the subjects are presented in their native garb, giving he subjects the opportunity explore their self-image, in a safe space where who they are how they see themselves are certain to be respected and admired. Wet-plate collodion is one of the earliest forms of photography. A wet-plate photographer makes a film based on a piece of glass or metal using collodion, submerges it in a silver nitrate solution to make it light sensitive, and then exposes the photograph usually in an old style wood bellows camera box and antique brass lens from the 1800's. The end result is a one-of-a-kind, archival object of art that will last many lifetimes. Shane and his Native American sitters have collaborated in the creation of a piece of contemporary history using classical methodology. The legacy he has created is indeed, who they were, what they were like, and what they did. There is nothing like it in the library of Native American portraiture in the modern era. The photographer's effort is to show that his subjects are still here--with their culture, dignity, and traditions.

Artificial Intelligence in Drug Design Alexander Heifetz,2021-11-04 This volume looks at applications of artificial intelligence (AI), machine learning (ML), and deep learning (DL) in drug design. The chapters in this book describe how AI/ML/DL approaches can be applied to accelerate and revolutionize traditional drug design approaches such as: structure- and ligand-based, augmented and multi-objective de novo drug design, SAR and big data analysis, prediction of binding/activity, ADMET, pharmacokinetics and drug-target residence time, precision medicine and selection of favorable chemical synthetic routes. How broadly are these approaches applied and where do they maximally impact productivity today and potentially in the near future. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary software and tools, step-by-step, readily reproducible modeling protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and unique, Artificial Intelligence in Drug Design is a valuable resource for structural and molecular biologists, computational and medicinal chemists, pharmacologists and drug designers.

Studies of Supply and Demand in Higher Education Charles T. Clotfelter,Michael Rothschild,2008-04-15 In the United States today, there are some 3,400 separately governed colleges and universities, amounting to a higher education industry with expenditures that constitute 2.8% of the gross national product. Yet, the economic issues affecting this industry have been paid relatively little attention. In this collection of eight essays, experts in economics and education bring economic analysis to bear on such underexamined topics as the nature of competition in higher education, higher education's use of resources, and who chooses to purchase what kind of education and why. In higher education, supply refers to such issues as government support for public colleges and universities, the means by which graduate programs allocate financial support to students, and the criteria that universities use for investing endowments. Demand pertains to patterns of student enrollment and to the government, business, and individual market for the service and research activities of higher education. Why are tuitions nearly the same among schools despite differences in prestige? How are institutions with small endowments able to compete successfully with institutions that have huge endowments? How are race and ethnicity reflected in enrollment trends? Where do the best students go? What choices among colleges do young people from low-income backgrounds face? This volume addresses these questions and suggests subjects for further study of the economics of higher education.
