The Demographic Dividend David Bloom, David Canning, Jaypee Sevilla, 2003-02-13 There is long-standing debate on how population growth affects national economies. A new report from Population Matters examines the history of this debate and synthesizes current research on the topic. The authors, led by Harvard economist David Bloom, conclude that population age structure, more than size or growth per se, affects economic development, and that reducing high fertility can create opportunities for economic growth if the right kinds of educational, health, and labor-market policies are in place. The report also examines specific regions of the world and how their differing policy environments have affected the relationship between population change and economic development.

Promoting Heritage Language in Northwest Russia Laura Siragusa, 2017-10-19 This volume illustrates how language revival movements in Russia and elsewhere have often followed a specific pattern of literacy bias in the promotion of a minority's heritage language, partly neglecting the social and relational aspects of orality. Using the Vepsian Renaissance as an example, this volume brings to the surface a literacy-orality dualism new to the discussion around revival movements. In addition to the more-theoretically oriented scopes, this book addresses all the actors involved in revival movements including activists, scholars and policy-makers, and opens a discussion on literacy and orality, and power and agency in the multiple relational aspects of written and oral practices. This study addresses issues common to language revival movements worldwide and will appeal to researchers of linguistic anthropology, sociolinguistics, education and language policy, and culture studies.

The State of the World's Children 2019 United Nations, 2019-10-15 This report examines nutrition, providing a fresh perspective on a rapidly evolving challenge. Despite progress in the past two decades, around 200 million under-fives suffer from undernutrition. Adding to this toll is rising obesity, which affects 38 million children. All these forms of malnutrition threaten children's development, while obesity is creating a lifelong legacy of disease. At the heart of this evolving challenge is a global shift towards modern diets that do not meet children's nutritional requirements. The report provides unique data and analysis of malnutrition in the 21st century and outlines recommendations to put children's needs at the heart of global and national food systems.

The Definitive Guide to the ARM Cortex-M0 Joseph Yiu, 2011-04-04 The Definitive Guide to the ARM Cortex-M0 is a guide for users of ARM Cortex-M0 microcontrollers. It presents many examples to make it easy for novice embedded-software developers to use the full 32-bit ARM Cortex-M0 processor. It provides an overview of ARM and ARM processors and discusses the benefits of ARM Cortex-M0 over 8-bit or 16-bit devices in terms of energy efficiency, code density, and ease of use, as well as their features and applications. The book describes the architecture of the Cortex-M0 processor and the programmers model, as well as Cortex-M0 programming and instruction set and how these instructions are used to carry out various operations. Furthermore, it considers how the memory architecture of the Cortex-M0 processor affects software development; Nested Vectored Interrupt Controller (NVIC) and the features it supports, including flexible interrupt management, nested interrupt support, vectored exception entry, and interrupt masking; and Cortex-M0 features that target the embedded operating system. It also explains how to develop simple applications on the Cortex-M0, how to program the Cortex-M0 microcontrollers in assembly and mixed-assembly languages, and how the low-power features of the Cortex-M0 processor are used in programming. Finally, it describes a number of ARM Cortex-M0 products, such as microcontrollers, development boards, starter kits, and development suites. This book will be useful to both new and advanced users of ARM Cortex devices, from students and hobbyists to researchers, professional embedded- software developers, electronic enthusiasts, and even semiconductor product designers. Minimum dietary diversity for women Food and Agriculture Organization of the United Nations ,2021-02-19 Women of reproductive age (WRA) are often nutritionally vulnerable because of the physiological demands of pregnancy and lactation. Requirements for most nutrients are higher for pregnant and lactating women than for adult men. The Minimum Dietary Diversity for WRA (MDD-W) indicator is a food-based diversity indicator that has been shown to reflect one key dimension of diet quality: micronutrient adequacy summarized across 11 micronutrients (Martin-Prével et al., 2015). Since the launch of the MDD-W indicator in 2015, new global developments and research conducted in three countries to further determine best practices in the data collection resulted in new information and guidelines. This research was supported by capacity-development activities on the assessment of individual food consumption.This publication is an update to the 2016 FAO/FHI 360 joint publication MDD-W: A Guide to Measurement. It includes guidance on the most accurate and valid methodologies on collecting, analyzing, interpreting, and presenting data on women’s dietary diversity, for use in research, impact assessment and large-scale, health and nutrition surveys such as the Demographic Health Survey (DHS), to generate nationally representative data, that are comparable over time and across countries.In addition to supporting the regular collection of high-quality dietary data following standardized methodologies, the publication also aims to promote dialogues on and appropriate application of the data towards informing policy and programming decisions and monitoring and evaluation of nutrition outcomes and progress at global, regional, and country levels.

Socio-Life Science and the COVID-19 Outbreak Makoto Yano,Fumihiko Matsuda,Anavaj Sakuntabhai,Shigeru Hirota,2022 This open access book presents the first step towards building socio-life science, a field of science investigating humans in such a way that both social and life-scientific factors are integrated. Because humans are both living and social creatures, a human action can never be understood fully without knowing both the biological traits of a person and the social scientific environments in which he exists. With this consideration, the editors of this book have initiated a research project promoting a deeper and more integrated understanding of human behavior and human health. This book aims to show what can, and could be, achieved through our interdisciplinary project. One important product is the newly formed three-party collaboration between Pasteur Institut, Kyoto University, and the Research Institute of Economy, Trade and Industry. Covering many different fields, including medicine, epidemiology, anthropology, economics, sociology, demography, geography, and policy, researchers in these institutes, and many others, present their studies on the COVID-19 pandemic. Although based on different methodologies, the studies show the importance of behavioral change and governmental policy in the fight against a huge pandemic. The book explains the unique genome cohort-panel data that the project builds to study social and life scientific aspects of humans.
