No Growth Without Equity? Santiago Levy, Michael Walton, 2009

This work examines the relationship between equity and growth in Mexico. It looks at how specific inequalities in power, wealth and status have created and sustained economic institutions and policies that both tend to perpetuate these inequalities and are sources of inefficiencies in the economy.

Dental Stem Cells: Regenerative Potential Barbara Zavan, Eriberto Bressan, 2016-07-25 This book focuses on the basic aspects of dental stem cells (DSCs) as well as their clinical applications in tissue engineering and regenerative medicine. It opens with a discussion of classification, protocols, and properties of DSCs and proceeds to explore DSCs within the contexts of cryopreservation; epigenetics; pulp, periodontal, tooth, bone, and corneal stroma regeneration; neuronal properties, mesenchymal stem cells and biomaterials; and as sources of hepatocytes for liver disease treatment. The fifteen expertly authored chapters comprehensively examine possible applications of DSCs and provide invaluable insights into mechanisms of growth and differentiation. *Dental Stem Cells: Regenerative Potential* draws from a wealth of international perspectives and is an essential addition to the developing literature on dental stem cells. This installment of Springer's Stem Cell Biology and Regenerative Medicine series is indispensable for biomedical researchers interested in bioengineering, dentistry, tissue engineering, regenerative medicine, cell biology and oncology.

Microsupercapacitors Kazufumi Kobashi, Karolina

Laszczyk, 2021-10-01 Microsupercapacitors systematically guides the

reader through the key materials, characterization techniques, performance factors and potential applications and benefits to society of this emerging electrical energy storage solution. The book reviews the technical challenges in scaling down supercapacitors, covering materials, performance, design and applications perspectives. Sections provide a fundamental understanding of microsupercapacitors and compare them to existing energy storage technologies. Final discussions consider the factors that impact performance, potential tactics to improve performance, barriers to implementation, emerging solutions to those barriers, and a future outlook. This book will be of particular interest to materials scientists and engineers working in academia, research and development. Provides a concise introduction of the fundamental science, related technological challenges, and solutions that microsupercapacitors can offer Compares microsupercapacitors with current technologies Reviews the applications of new strategies and the challenge of scaling down supercapacitors Covers the most relevant applications, including energy storage, energy harvesting, sensors and biomedical devices

Leadership, Gender, and Organization Mollie Painter-

Morland, 2011-04-23 This text provides perspectives on the way in which gender plays a role in leadership dynamics and ethics within organizations. It seeks to offer new theoretical models for thinking about leadership and organizational influence. Most studies of women's leadership draw on an ethics of care as characteristic of the way women lead, but as such, it tends towards essentialist gender stereotypes and does little to explain the complex systemic variables that influence the functioning of women within organizations. This book moves beyond the canon in exploring alternative paradigms for thinking about leadership and gender in organizations. The authors

draw on the literature available in systems thinking, systemic leadership, and gender theory to offer alternative perspectives for thinking about the ways women lead. The book offers invaluable theoretical perspectives and insightful narratives to graduate students and researchers who are interested in women's leadership, gender and organization. It will be of interest to all women in leadership positions, but specifically to those interested in understanding the systemic nature of leadership and their role within it.

The Ohlone Way Malcolm Margolin, 1978-08-01 A look at what Native American life was like in the Bay Area before the arrival of Europeans. Two hundred years ago, herds of elk and antelope dotted the hills of the San Francisco–Monterey Bay area. Grizzly bears lumbered down to the creeks to fish for silver salmon and steelhead trout. From vast marshlands geese, ducks, and other birds rose in thick clouds “with a sound like that of a hurricane.” This land of “inexpressible fertility,” as one early explorer described it, supported one of the densest Indian populations in all of North America. One of the most ground-breaking and highly-acclaimed titles that Heyday has published, *The Ohlone Way* describes the culture of the Indian people who inhabited Bay Area prior to the arrival of Europeans. Recently included in the San Francisco Chronicle's Top 100 Western Non-Fiction list, *The Ohlone Way* has been described by critic Pat Holt as a “mini-classic.” Praise for *The Ohlone Way* “[Margolin] has written thoroughly and sensitively of the Pre-Mission Indians in a North American land of plenty. Excellent, well-written.” —American Anthropologist “One of three books that brought me the most joy over the past year.” —Alice Walker “Margolin conveys the texture of daily life, birth, marriage, death, war, the arts, and rituals, and he also discusses the brief history of the Ohlones under the Spanish, Mexican,

and American regimes . . . Margolin does not give way to romanticism or political harangues, and the illustrations have a gritty quality that is preferable to the dreamy, pretty pictures that too often accompany texts like this.” —Choice “Remarkable insight in to the lives of the Ohlone Indians.” —San Francisco Chronicle “A beautiful book, written and illustrated with a genuine sympathy . . . A serious and compelling re-creation.” —The Pacific Sun

Money George Selgin,2017-04-01 Why has the United States experienced so many crippling financial crises? The popular answer: U.S. banks have long been poorly regulated, subjecting the economy to the whims of selfish interest, which must be tempered by more government regulation and centralization. George Selgin turns this conventional wisdom on its head. In essays covering U.S. monetary policy since before the Civil War, he painstakingly traces financial disorder to its source: misguided government regulation, dispelling the myth of the Federal Reserve as a bulwark of stability.

Land in Transition Martin Ravallion,Dominique van de Walle,2008-04-30 This book offers a set of methods, drawing on the tool kit of modern economics, to ascertain what Vietnam's economy would have looked like without reforms and assesses what types of households are likely to gain from the reforms. The book's findings have implications on broader issues of social protection in developing rural economies.

Production at the Leading Edge of Technology Bernd-Arno Behrens,Alexander Brosius,Wolfgang Hintze,Steffen Ihlenfeldt,Jens Peter Wulfsberg,2021 This congress proceedings provides recent research on leading-edge manufacturing processes. The aim of this

scientific congress is to work out diverse individual solutions of production in the border area and transferable methodological approaches. In addition, guest speakers with different backgrounds will give the congress participants food for thoughts, interpretations, views and suggestions. The manufacturing industry is currently undergoing a profound structural change, which on the one hand produces innovative solutions through the use of high-performance communication and information technology, and on the other hand is driven by new requirements for goods, especially in the mobility and energy sector. With the social discourse on how we should live and act primarily according to guidelines of sustainability, structural change is gaining increasing dynamic. It is essential to translate politically specified sustainability goals into socially accepted and marketable technical solutions. Production research is meeting this challenge and will make important contributions and provide innovative solutions from different perspectives.

Mycobacterial Skin Infections Domenico Bonamonte, Gianni Angelini, 2018-08-10 This well-illustrated book is a comprehensive guide to the cutaneous clinical presentations of mycobacterial infections. The *Mycobacterium* genus includes over 170 species, nontuberculous mycobacteria (NTM) having been added to the obligate human pathogens such as *M. tuberculosis* and *M. leprae*. NTM are widely distributed in the environment with high isolation rates worldwide; the skin is a major target with variable clinical manifestations. A current resurgence in tuberculosis is aggravated by the synergy with human immunodeficiency virus, the breakdown of health care systems, and the rise in multidrug-resistant disease, as the incidence of leprosy remains stable, at around 250,000 new cases

annually, regardless of effective antibiotic therapy. Presentations of various cutaneous infections caused by mycobacteria may be overlooked by clinicians owing the lack of familiarity with tuberculosis, leprosy, and the related NTM clinical features. This handy guide will help the dermatologist to spot the different clinical manifestations, make a prompt diagnosis, and apply effective treatment.

Worldwide Evil and Misery Robin Ruiter, 2015-09-03 BANNED IN FRANCE This book is about the development of a New World Order that aims to suppress the whole of humanity. We are raised, by tradition, to trust our governments, and convinced that they care about us. This, however, is a big mistake. Below the surface of official politics lies a complicated social and intellectual process that is taking place. The world is governed by very different personages from what is imagined by those who are not behind the scenes. We are governed, our minds are molded, our tastes formed, our ideas-suggested, largely by men, that we have never heard of. In almost every act of our daily lives, whether in the sphere of politics or business, in our social conductor or our ethical thinking, we are dominated by the relatively small number of persons. Are the visible world leaders just mere puppets directed by an invisible power from behind the scenes? Are there invisible hands controlling the world? Is there a conspiracy? Who are the conspirators? We are dealing with the rise of a new geo-political supranational power on the world scene. This geo-political power consists of the richest families on this planet. Together with the most powerful multinationals they rule and control all countries and all coalitions. The true aim of this elite group is complete control of Planet Earth. They consist of a small elite group formed by the most influential and powerful, anonymous, very

exclusive family dynasties that live dispersed over the world. They keep their power and money betwixt them by intermarriage. They operate behind the scenes of the most important enterprises, media and the financial institutions, but also behind the political scenes. Through connections, money and violence these powerful double-crossing families slipped in with one ultimate goal: the establishment of a One World dictatorship. Their target is to force a New World Order on the whole of mankind. They have bought an enormous part of the world with its economic power and placed it under its control. With the help of their unimaginable financial reserves they currently dispose of a worldwide financial control system with which they can control the entire world economy and political system. They determine how the leading politicians of this world have to act. Over time these influential families have extended the scope of their power over the whole world. Their web reaches all corners of the world. Their tentacles are woven with all facets of human existence. Their influence is unimaginable and it reaches all the leading institutions and organizations in the fields of politics, education, religion, finances and mass media. Science has also been infiltrated by them and is financially dependent on them and thus subject to manipulation (think of the Rockefeller, Carnegie, and Guggenheim foundation). The New World Order they are planning will be a World Dictatorship. Conservatives will call it Socialism or Communism. Liberals will call it Fascism. The label makes little difference; it will be the Gulag Archipelago on a worldwide basis. This book is a very unique publication and reading it will undoubtedly change the way you look at both history and the world today. It completely turns everything on its head. Once you read it, all of a sudden you will see the world around you in infrared. You soon see things which are simply not

possible to view with the range of standard vision. The contents of this book is highly controversial and uncompromising. It describes a monster that we, in all our ignorance, have created together. It also serves to give us an idea of what's in store for the near future, so we can better prepare for what's coming our way. In 2006 the first French edition of this book was banned in France.

Global Gender and Environment Outlook Joni Seager, Jamie Bechtel, 2016 The global gender and environment outlook provides an overview of critical evaluations and analyses of the interlinkages between gender and the environment, and their importance for gender-sensitive policymaking and actions.--Publisher's description.

Growing Pains in Latin America Liliana Rojas-Suárez, 2009 Growing Pains in Latin America lays out and applies a region-specific framework for delivering sustainable economic growth. A task force of experts led by CGD senior fellow Liliana Rojas-Suarez and MIT professor Simon Johnson describes the framework, its (simple) principles, and its flexibility and ability to adapt. Other experts then apply the framework to Brazil, Colombia, Costa Rica, Mexico, and Peru, providing specific policy recommendations while taking into account the unique conditions of each country. In an introductory essay, Rojas-Suarez explains and contextualizes the need for a new approach to growth in Latin America. Comprehensive yet flexible, the recommendations in Growing Pains can be applied to all of Latin America and will be valuable to anyone concerned with growth, prosperity, and equality in the region. Book jacket.

The Impact of Macroeconomic Policies on Poverty and Income Distribution François Bourguignon, Maurizio Bussolo, Luiz A. Pereira da Silva, 2008-01-01 A companion to the bestseller, *The Impact of Economic Policies on Poverty and Income Distribution*, this title deals

with theoretical challenges and cutting-edge macro-micro linkage models. The authors compare the predictive and analytical power of various macro-micro linkage techniques using the traditional RHG approach as a benchmark to evaluate standard policies, such as, a typical stabilization package and a typical structural reform policy.

The Microeconomics of Income Distribution Dynamics in East Asia and Latin America François Bourguignon, Francisco H. G.

Ferreira, Nora Lustig, 2004 This book is about how the distribution of income changes during the process of income development.

Understanding development and the process of poverty reduction requires understanding not only how total income grows but also how its distribution behaves over time. The authors propose a decomposition of differences in entire distributions of household incomes, shedding new light on the powerful, and often conflicting, forces that underpin the changes in poverty and inequality that accompany the process of economic development. This approach is applied to three East Asian countries -- Indonesia, Malaysia, and China -- and to four in Latin America -- Argentina, Brazil, Colombia, and Mexico.
