Data Center Fundamentals Mauricio Arregoces,Maurizio Portolani,2003-12-04 Master the basics of data centers to build server farms that enhance your Web site performance Learn design guidelines that show how to deploy server farms in highly available and scalable environments Plan site performance capacity with discussions of server farm architectures and their real-life applications to determine your system needs Today's market demands that businesses have an Internet presence through which they can perform e-commerce and customer support, and establish a presence that can attract and increase their customer base.

Underestimated hit ratios, compromised credit card records, perceived slow Web site access, or the infamous Object Not Found alerts make the difference between a successful online presence and one that is bound to fail. These challenges can be solved in part with the use of data center technology. Data centers switch traffic based on information at the Network, Transport, or Application layers. Content switches perform the best server selection process to direct users' requests for a specific service to a server in a server farm. The best server selection process takes into account both server load and availability, and the existence and consistency of the requested content. Data Center Fundamentals helps you understand the basic concepts behind the design and scaling of server farms using data center and content switching technologies. It addresses the principles and concepts needed to take on the most common challenges encountered during planning, implementing, and managing Internet and intranet IP-based server farms. An in-depth analysis of the data center technology with real-life scenarios make Data Center Fundamentals an ideal reference for understanding, planning, and designing Web hosting and e-commerce environments.

*World Development Report 2020* World Bank,2019-11-19 Global value chains (GVCs) powered the surge of international trade after 1990 and now account for almost half of all trade. This shift enabled an unprecedented economic convergence: poor countries grew rapidly and began to catch up with richer countries. Since the 2008 global financial crisis, however, the growth of trade has been sluggish and the expansion of GVCs has stalled. Meanwhile, serious threats have emerged to the model of trade-led growth. New technologies could draw production closer to the consumer and reduce the demand for labor. And trade conflicts among large countries could lead to a retrenchment or a segmentation of GVCs. World Development Report 2020: Trading for Development in the Age of Global Value Chains examines whether there is still a path to development through GVCs and trade. It concludes that technological change is, at this stage, more a boon than a curse. GVCs can continue to boost growth, create better jobs, and reduce poverty provided that developing countries implement deeper reforms to promote GVC participation; industrial countries pursue open, predictable policies; and all countries revive multilateral cooperation.

**Key Issues for Mountain Areas** Martin F. Price,Libor Jansky,Andrei A. Iatsenia,2004 Mountain areas cover almost one quarter of the earth's land surface, with a quarter of the global population living on them or very close by, and they are sources of water, food, timber, minerals and other natural resources. They provide many opportunities for recreation, as well as being centres of biological and cultural diversity and religious significance. Unfortunately, mountain environments and populations are also particularly threatened by climate change and political conflicts, and their inhabitants include many of the poorest and most vulnerable in the world. This publication includes a number of papers which explore a range of sustainable development challenges for mountain regions.

**U. S. Sanctions on Russia** Kristin Archick,Rebecca M. Nelson,Dianne E. Rennack,2018-12-04 Sanctions are considered by many to be a central element of U.S. policy to counter Russian malign behavior. Most Russia-related sanctions have been in response to Russia's 2014 invasion of Ukraine. In addition, the United States has imposed sanctions on Russia in response to human rights abuses, election interference and cyberattacks, weapons proliferation, illicit trade with North Korea, support to Syria, and use of a chemical weapon. The United States also employs sanctions to deter further objectionable activities. Most Members of Congress support a robust use of sanctions amid concerns about Russia's international behavior and geostrategic intentions. Ukraine-related sanctions are mainly based on four executive orders (EOs) the President introduced in 2014. In addition, Congress passed and the President signed into law two acts establishing sanctions in response to Russia's invasion of Ukraine: the Support for the Sovereignty, Integrity, Democracy, and Economic Stability of Ukraine Act of 2014 (SSIDES; P.L. 113-95) and the Ukraine Freedom Support Act of 2014 (UFSA; P.L. 113-272). In 2017, Congress passed and the President signed into law the Countering Russian Influence in Europe and Eurasia Act of 2017 (CRIEEA; P.L. 115-44, Countering America's Adversaries Through Sanctions Act [CAATSA], Title II). This legislation codifies Ukraine-related and cyberrelated EOs, strengthens existing Russia-related sanctions authorities, and identifies several new targets for sanctions. It also establishes congressional review of any action the President takes to ease or lift a variety of sanctions. Additional sanctions on Russia may be forthcoming. On August 6, 2018, the United States determined that in March 2018 the Russian government used a chemical weapon in the United Kingdom in contravention of international law. In response, the United States launched an initial round of sanctions on Russia, as required by the Chemical and Biological Weapons Control and Warfare Elimination Act of 1991 (CBW Act; P.L. 102-182, Title III). The law requires a second, more severe round of sanctions in the absence of Russia's reliable commitment to no longer use such weapons. The United States has imposed most Ukraine-related sanctions on Russia in coordination with the European Union (EU). Since 2017, the efforts of Congress and the Trump Administration to tighten U.S. sanctions on Russia have prompted some degree of concern in the EU about U.S. commitment to sanctions coordination and U.S.-EU cooperation on Russia and Ukraine more broadly. The EU, in addition, continues to consider its response to Russia's use of a chemical weapon in the United Kingdom. Debates about the effectiveness of U.S. and other sanctions on Russia continue in Congress, in the Administration, and among other stakeholders. Russia has not reversed its occupation and annexation of Ukraine's Crimea region, nor has it stopped fostering separatism in eastern Ukraine. With respect to other malign activities, the relationship between sanctions and Russian behavior is difficult to determine. Nonetheless, many observers argue that sanctions help to restrain Russia or that their imposition is an appropriate foreign policy response regardless of immediate effect. In the 115th Congress, several bills have been introduced to increase the use of sanctions in response to Russia's malign activities. The 116th Congress is likely to continue to debate the role of sanctions in U.S. foreign policy toward Russia.
