Conceptualizing Politics Furio Cerutti, 2017-04-21 Politics is hugely complex. Some try to reduce its complexity by examining it through an ideological worldview, a one-size-fits-all prescriptive formula or a quantitative examination of as many 'facts' as possible. Yet politics cannot be adequately handled as if it were made of cells and particles: ideological views are oversimplifying and sometimes dangerous. Politics is not simply a moral matter, nor political philosophy a subdivision of moral philosophy. This book is devised as a basic conceptual lexicon for all those who want to understand what politics is, how it works and how it changes or fails to change. Key concepts such as power, conflict, legitimacy and order are clearly defined and their interplay in the state, interstate and global level explored. Principles such as liberty, equality, justice and solidarity are discussed in the context of the political choices confronting us. This compact and systematic introduction to the categories needed to grasp the fundamentals of politics will appeal to readers who want to gain a firmer grasp on the workings of politics, as well as to scholars and students of philosophy, political science and history.

CHARGE Syndrome, Second Edition Timothy S. Hartshorne, Margaret A. Hefner, Kim D. Blake, 2021-01-12 It was first described in 1979, named in 1981, and in 2004 a gene for CHARGE was identified. Engineering European Unity Éva Bóka, 2022-11-30 Which European and non-European ideas and practices facilitated the shaping of European unity? Or rather, which pursuits led to deadlocks in the cooperation between states? The book seeks answers to these questions by surveying the historical attempts at realizing supranational patterns of governance in Europe since the Middle Ages. The main focus is on the nineteenth and twentieth century organizational models of European unification. The analysis draws on an abundance of historical and legal source material. While the author encourages critical thinking about European integration, the exploration is admittedly based on specific values. Éva Bóka claims that the struggle for the humanization of power with its democratic creative force has been the major driver in the development of the system of liberties and the idea of European unity. The analysis of the historical process up to the Lisbon Treaty (2007) with the recognition of common,

shared, and supported competences meets the author's set of values to a great extent. The last part of the book examines whether the European Union can serve as a political and economic organizational model for other parts of the world.

Ethics and Pandemics Andrew Sola, 2023-06-23 This book is for readers who wish to understand the ethical implications of the COVID-19 pandemic – holistically – on communities, politics, the economy, the environment, international relations, public health, and, most importantly, on their own lives and their own futures. It also helps readers to think through the wide-ranging ethical implications of the new age of global pandemics. The COVID-19 pandemic has transformed all of our lives to such an extent that no single publication will ever be able to capture its complexity. The book acknowledges this complexity by embracing interdisciplinary dialogue. It is open to diverse points of view, different ethical systems, and a wide variety of academic disciplines. It suggests three broad avenues to exploring the subject: Ethics for Pandemics: What ethical theories are useful for pandemic living? Ethics in Pandemics: How are long-standing ethical dilemmas revealed in pandemics? Ethics of Pandemics: How should politicians and public health professionals create ethical systems of pandemic management? Interdisciplinary perspectives are another key feature of the book and reflect the important insights that many academic disciplines – medical ethics and public health, history, political science, economics, behavioral and evolutionary psychology, and climate science – bring to bear on the subject. In the chapters, the author joins theory and practice, providing an overview of the major ethical theories: Kant and Deontology Utilitarianism and Consequentialist Ethics Social Contract Theory Egoism and Altruism Virtue Ethics It then uses these theories to analyze both COVID-19 and also historical pandemics, including typhus, smallpox, the Black Death, HIV/AIDS, and polio. *Ethics and Pandemics: Interdisciplinary Perspectives on COVID-19 and Future Pandemics* prepares readers to better understand ethical living during times of crisis. While written for students pursuing any discipline, it is particularly suited for those seeking degrees in public health, health care, political science, and philosophy. Furthermore, non-specialized readers and members of the general public will find the book of interest.

Multinationals and the Constitutionalization of the World Power System Jean-Philippe Robé, Antoine Lyon-Caen, Stéphane Vernac, 2016-06-03 This collection offers a powerful and coherent study of the transformation of the multinational enterprise as both an object and subject of law within and beyond States. The study develops an analysis of the large firm as being a system of organization exercising vast powers through various instruments of private law, such as property rights, contracts and corporations. The volume focuses on the firm as the operational unit of governance within emerging systems of globalization, whilst exploring in-depth the forms within which the firm might be regulated as against the inhibiting parameters of national law. It connects, through the ordering concept of the firm in globalization, the distinct regimes of constitutionalization, national and international law. The study will be of interest to students and academics in globalization and the regulation of multinational corporations, as well as law, economics and politics on a global scale. It will also interest government leaders and NGOs working in the areas of MNE regulations.

Libraries, Archives and Museums as Democratic Spaces in a Digital Age Ragnar Audunson, Herbjørn Andresen, Cicilie Fagerlid, Erik Henningsen, Hans-Christoph Hobohm, Henrik Jochumsen, Håkon Larsen, Tonje Vold, 2020-09-07 Libraries, archives and museums have traditionally been a part of the public sphere's infrastructure. They have been so by providing public access to culture and knowledge, by being agents for enlightenment and by being public meeting places in their communities. Digitization and globalization poses new challenges in relation to upholding a sustainable public sphere. Can libraries, archives and museums contribute in meeting these challenges?

Building and Dwelling Richard Sennett, 2023-08-22 A reflection on the past and present of city life, and a bold proposal for its future “Constantly stimulating ideas from a veteran of urban thinking.”—Jonathan Meades, *The Guardian* In this sweeping work, the preeminent sociologist Richard Sennett traces the anguished relation between how cities are built and how people live in them, from ancient Athens to twenty-first-century Shanghai. He shows how Paris, Barcelona, and New York City assumed their modern forms; rethinks the reputations of Jane Jacobs, Lewis Mumford, and others; and takes us on a tour of emblematic contemporary locations, from the backstreets of Medellín, Colombia, to Google headquarters in Manhattan. Through it all, Sennett laments that the “closed city”—segregated, regimented, and controlled—has spread from the Global North to the exploding urban centers of the Global South. He argues instead for a flexible and dynamic “open city,” one that provides a better quality of life, that can adapt to climate change and challenge economic stagnation and racial separation. With arguments that speak directly to our moment—a time when more humans live in urban spaces than ever before—Sennett forms a bold and original vision for the future of cities.

Zoned in the USA Sonia A. Hirt, 2015-02-24 Why are American cities, suburbs, and towns so distinct? Compared to European cities, those in the United States are characterized by lower densities and greater distances; neat,

geometric layouts; an abundance of green space; a greater level of social segregation reflected in space; and—perhaps most noticeably—a greater share of individual, single-family detached housing. In *Zoned in the USA*, Sonia A. Hirt argues that zoning laws are among the important but understudied reasons for the cross-continental differences. Hirt shows that rather than being imported from Europe, U.S. municipal zoning law was in fact an institution that quickly developed its own, distinctly American profile. A distinct spatial culture of individualism—founded on an ideal of separate, single-family residences apart from the dirt and turmoil of industrial and agricultural production—has driven much of municipal regulation, defined land-use, and, ultimately, shaped American life. Hirt explores municipal zoning from a comparative and international perspective, drawing on archival resources and contemporary land-use laws from England, Germany, France, Australia, Russia, Canada, and Japan to challenge assumptions about American cities and the laws that guide them.

This book will be of interest to researchers and academics in the field of investment theory, as well as investment practitioners.

The Human Factor in a Mission to Mars Konrad Szocik, 2019-04-09 A manned mission to Mars is faced with challenges and topics that may not be obvious but of great importance and challenging for such a mission. This is the first book that collects contributions from scholars in various fields, from astronomy and medicine, to theology and philosophy, addressing such topics. The discussion goes beyond medical and technological challenges of such a deep-space mission. The focus is on human nature, human emotions and biases in such a new environment. The primary audience for this book are all researchers interested in the human factor in a space mission including

philosophers, social scientists, astronomers, and others. This volume will also be of high interest for a much wider audience like the non-academic world, or for students.

The Solution to an Injustice in Trials Sinclair Banks, 2019-03-01 This 664 page law and logic book contains the most comprehensive and detailed description of the composition of argument ad hominem ever published, revealing this form of argument to be a far broader fallacy than was previously known. Like perjury, argument ad hominem can deceive juries and cause unjust trial verdicts. There is, fortunately, already a criminal law against perjury, but, unfortunately, there is currently no law that expressly prohibits argument ad hominem in trials. The book includes the text of a proposed criminal law that expressly prohibits argument ad hominem in trials, and shows the necessity of such a law to counter effectively this quite common form of injustice in jury trials. Passionate Animals Mara-Daria Cojocaru, 2022-02 To solve the problems of factory farming and animal experimentation, what we need is not new philosophical knowledge but a systematic exploration of how to put what we know into practice. This book argues for combining pragmatism and vision, reason and emotions, and morality and politics to foster significantly better human-animal relations.

The Human Body in Early Iron Age Central Europe Katharina Rebay-Salisbury, 2016-12-08 Identities and social relations are fundamental elements of societies. To approach these topics from a new and different angle, this study takes the human body as the focal point of investigation. It tracks changing identities of early Iron Age people in central Europe through body-related practices: the treatment of the body after death and human representations in art. The human remains themselves provide information on biological parameters of life, such as sex, biological age, and health status. Objects associated with the body in the grave and funerary practices give further insights on how people of the early Iron Age understood life and death, themselves, and their place in the world. Representations of the human body appear in a variety of different materials, forms, and contexts, ranging from ceramic figurines to images on bronze buckets. Rather than focussing on their narrative content, human images are here interpreted as visualising and mediating identity. The analysis of how image elements were connected reveals networks of social relations that connect central Europe to the Mediterranean. Body ideals, nudity, sex and gender, aging, and many other aspects of women's and men's lives feature in this book. Archaeological evidence for marriage and motherhood, war, and everyday life is brought together to paint a vivid picture of the past.

Handbook on Food Raghbendra Jha, Raghav Gaiha, Anil B. Deolalikar, 2014-01-01 'This volume is a welcome and timely contribution to a topic of enduring importance. The global consequences of recent food price crises underscore the need to examine food security issues from diverse perspectives. This volume meets that need, featuring accessible yet cutting-edge analyses of food security by leading experts in fields as diverse as trade, nutrition, public health, production, political economy, and behavioral economics. It will be of interest to a wide range of scholars and practitioners.' --Steven Block, Tufts University, US. 'This excellent volume offers a compact but wide-ranging survey of recent research on important changes in global food markets. Its 20 chapters accurately

capture important areas of scholarly agreement as well as on-going debates among economists studying agriculture and nutrition, with several provocative original contributions from other fields. The book draws particularly on the authors' long experience in Asia, offering widely-applicable insights for scholars and policy analysts seeking to understand the past, present and future of food around the world.' --William A. Masters, Tufts University, US. The global population is forecasted to reach 9.4 billion by 2050, with much of this increase concentrated in developing regions and cities. Ensuring adequate food and nourishment to this large population is a pressing economic, moral and even security challenge and requires research (and action) from a multi-disciplinary perspective. This book provides the first such integrated approach to tackling this problem by addressing the multiplicity of challenges posed by rising global population, diet diversification and urbanization in developing countries and climate change. It examines key topics such as: the impact of prosperity on food demand, the role of international trade in addressing food insecurity, the challenge posed by greenhouse gas emissions from agriculture and land degradation, the implication on labor markets of severe under-nutrition, viability of small scale farms, strategies to augment food availability. The Handbook on Food would be a welcome supplementary text for courses on development economics, particularly those concentrating on agricultural development, climate change and food availability, as well as nutrition.

The Linguistic Toolkit for Teachers of English Rolf Kreyer, 2023-10-23 In contrast to literary or cultural studies linguistics is not taught in the EFL classroom, yet, it plays a major role in any English language teaching degree. Given this discrepancy it does not come as a surprise that students sometimes ask: I want to be a teacher! Why do I need all this? The main goal of this textbook is to demonstrate the relevance of linguistic expertise for the EFL classroom. It explores a wide range of topics (phonetics/phonology, lexis, corpus linguistics, text linguistics and the power of language) with a clear focus on providing a convincing answer to the question above. With its highly accessible style and layout, a wealth of examples and exercises as well as a large range of additional innovative online materials this textbook sets out to convince its readers that they will be better teachers if they are good linguists.

Moralistics and Psychomoralistics Graham Wood, 2022-10-24 This book brings together three distinct research programmes in moral psychology – Moral Foundations Theory, Cognitive Adaptations for Social Exchange, and the Linguistic Analogy in Moral Psychology – and shows that they can be combined to create a unified cognitive science of moral intuition. The book assumes evolution has furnished the human mind with two types of judgement: intuitive and deliberative. Focusing on moral intuitions (understood as moral judgments that were not arrived at via a process of conscious deliberation), the book explores the origins of these intuitions, examines how they are produced, and explains why the moral intuitions of different humans differ. Providing a unique synthesis of three separate established fields, this book presents a new research program that will further our understanding of the various different intuitive moral judgements at the heart of some of the moral tensions within human society.
