The Robomobility Revolution of Urban Public Transport Sylvie Mira-Bonnardel, Fabio

Antonialli, Danielle Attias, 2021-08-31 Over the past two decades, society has been witnessing how technological, political, and societal changes have been transforming individual and collective urban mobility. Driven both by newcomers and traditional players, by disruptive as well as incremental innovations, the main objective now is to enhance mobility and accessibility while, reducing vehicle ownership, congestion, road accidents, and pollution in cities. This transformation has been mainly enabled by the widespread adoption of internet-connected devices (e.g.: smartphones and tablets) and by the innovative business models, technologies, and use-cases that arose from this rapid digitalization, such as peer-to-peer, and two-sided markets providing several mobility schemes: car-sharing, car-pooling, bike sharing, free-floating (cars, bikes, electric scooter), ridesharing and ride hailing either for long distances as well as for urban and micro-mobility. The book presents – in a holistic perspective – how this revolution is happening and what are the major cornerstones for the implementation of robomobility. It aims at answering several substantial issues, such as: What is robomobility and what does it imply for the different stakeholders of the public transport ecosystem? How do policy makers integrate this innovation and how ready the regulations are? How do citizens take part in this transformation? What is the level of user acceptance for this new type of mobility? What are its environmental impacts? What is the economic impact of deploying these shuttles in a local ecosystem?

Connected and Autonomous Vehicles in Smart Cities Hussein T. Mouftah, Melike Erol-

Kantarci, Sameh Sorour, 2020-12-17 This book presents a comprehensive coverage of the five fundamental yet intertwined pillars paving the road towards the future of connected autonomous

electric vehicles and smart cities. The connectivity pillar covers all the latest advancements and various technologies on vehicle-to-everything (V2X) communications/networking and vehicular cloud computing, with special emphasis on their role towards vehicle autonomy and smart cities applications. On the other hand, the autonomy track focuses on the different efforts to improve vehicle spatiotemporal perception of its surroundings using multiple sensors and different perception technologies. Since most of CAVs are expected to run on electric power, studies on their electrification technologies, satisfaction of their charging demands, interactions with the grid, and the reliance of these components on their connectivity and autonomy, is the third pillar that this book covers. On the smart services side, the book highlights the game-changing roles CAV will play in future mobility services and intelligent transportation systems. The book also details the ground-breaking directions exploiting CAVs in broad spectrum of smart cities applications. Example of such revolutionary applications are autonomous mobility on-demand services with integration to public transit, smart homes, and buildings. The fifth and final pillar involves the illustration of security mechanisms, innovative business models, market opportunities, and societal/economic impacts resulting from the soon-to-be-deployed CAVs. This book contains an archival collection of top quality, cutting-edge and multidisciplinary research on connected autonomous electric vehicles and smart cities. The book is an authoritative reference for smart city decision makers, automotive manufacturers, utility operators, smart-mobility service providers, telecom operators, communications engineers, power engineers, vehicle charging providers, university professors, researchers, and students who would like to learn more about the advances in CAEVs connectivity, autonomy, electrification, security, and integration into smart cities and intelligent transportation systems.

Leap 4.0. African Perspectives on the Fourth Industrial Revolution Zamanzima Mazibuko-

Makena,Erika Kraemer-Mbula.,2021-04-09 Leap 4.0: African Perspectives on the Fourth Industrial Revolution seeks to identify the challenges and opportunities the 4IR presents to South Africa and the rest of the African continent, especially to workers and marginalised sectors of society. Authors examine the prerequisites for the successful introduction of the 4IR, including infrastructure, skilled personnel and appropriate regulation. They underline the importance of inclusive innovation, with a deliberate objective to create net new jobs and reduce inequality. The 4IR is well established in many parts of the world, with technological advances driving profound social and economic change. However, for many developing countries, particularly countries in Africa, the 4IR may not offer the anticipated 'leap' forward. There is a danger that the continent may find itself dictated to by experiences that are not in tune with its social contexts.

Shifting Mobility Dewan Masud Karim,2023-12-01 In the face of resource depletion, environmental changes, lifestyle changes, demographic and digital adaptation, old ideologies of city building and expensive and complex automobility solutions are in freefall. These changes are creating severe friction between the old and new paradigms. This book provides new perspectives through the process of ideological disassociation and concepts of human mobility code. The basic premise of the book, human mobility is an essential component of our creativity that comes from our unconscious desire to become a part of a community. Several new concepts in the book starts with the hallmark of new discovery of human mobility code and its implications of urban mobility boundary systems to stay within safe planetary zone. A new discovery of human mobility code from comprehensive research finding prove that each individual develops a unique mobility footprint and become our mobility identity. Beyond individual hallmarks, human develops collective mobility codes through interaction with the third space on which entire mobility systems lie and are created by the

fundamentals of city planning and the design process. Readers are introduced to an innovative mobility planning process and reinvention of multimodal mobility approaches based on new mobility code while formulating new concepts, practical solutions and implementation techniques, tools, policies, and processes to reinforce low-carbon mobility options while addressing social equity, environmental, and health benefits. Finally, the book arms us with knowledge to prevent the disaster of full technological enlightenment against our natural human mobility code.

AVENUE21. Connected and Automated Driving: Prospects for Urban Europe Mathias Mitteregger, Emilia M. Bruck, Aggelos Soteropoulos, Andrea Stickler, Martin Berger, Jens S. Dangschat, Rudolf Scheuven, Ian Banerjee, 2021-10-07 This open access publication examines the impact of connected and automated vehicles on the European city and the conditions that can enable this technology to make a positive contribution to urban development. The authors argue for two theses that have thus far received little attention in scientific discourse: as connected and automated vehicles will not be ready for use in all parts of the city for a long time, previously assumed effects – from traffic safety to traffic performance as well as spatial effects – will need to be re-evaluated. To ensure this technology has a positive impact on the mobility of the future, transport and settlement policy regulations must be adapted and further developed. Established territorial, institutional and organizational boundaries must be investigated and challenged quickly. Despite – or, indeed, because of – the many uncertainties, we find ourselves at the beginning of a new design phase, not only in terms of technology development, but also regarding politics, urban planning, administration and civil society.

Hope Matters Elin Kelsey, 2020-10-27 “This book comes at just the right moment. It is NOT too late if we get together and take action, NOW.” —Jane Goodall Fears about climate change are fueling an epidemic of despair across the world: adults worry about their children’s future; thirty-somethings question whether they should have kids or not; and many young people honestly believe they have no future at all. In the face of extreme eco-anxiety, scholar and award-winning author Elin Kelsey argues that our hopelessness—while an understandable reaction—is hampering our ability to address the very real problems we face. Kelsey offers a powerful solution: hope itself. Hope Matters boldly breaks through the narrative of doom and gloom to show why evidence-based hope, not fear, is our most powerful tool for change. Kelsey shares real-life examples of positive climate news that reveal the power of our mindsets to shape reality, the resilience of nature, and the transformative possibilities of individual and collective action. And she demonstrates how we can build on positive trends to work toward a sustainable and just future, before it’s too late. Praise for Hope Matters “Whether you consider yourself a passionate ally of nature, a busy bystander, or anything in between, this book will uplift your spirits, helping you find hope in the face of climate crisis.” —Veronica Joyce Lin, North American Association for Environmental Education “30 Under 30” “A tonic in hard times.” —Claudia Dreyguis, author of Scientific Conversations: Interviews on Science from the New York Times “Beautifully written and an effective antidote against apathy and inaction.” —Christof Mauch, Director, Rachel Carson Center for the Environment and Society Published in Partnership with the David Suzuki Institute.

Pension Sustainability in China Randong Yuan, 2021-11-29 Pension Sustainability in China: Fragmented Administration and Population Aging aims to investigate the impact of fragmentation and population ageing on pension sustainability in China. The book demonstrates how pension sustainability is compromised by various adverse effects produced by fragmentation, such as the moral hazard caused by the disarticulated intergovernmental fiscal responsibility. An overlapping generations (OLG) model is updated with the latest demographic data and is used to assess the impact of population ageing on pension sustainability. The book considers whether adjustment in retirement age can ensure long-term financial sustainability. It explores how, compared to the population ageing, the issues stemming from the fragmentation pose a more insidious threat to pension sustainability in China.
