**Wi-Fi** Martin Laurence, 2016-05-01 Do you have poor Wi-Fi? Is your internet working at the speed of an asthmatic ant climbing a hill? People often think slow Wi-Fi is a minefield of problems to try to figure out and will cost a fortune to put right. In this book I will cover 10 methods ranging from very easy to more technical to solve extensive Wi-Fi problems. The best thing is that you can solve these issues yourself and boost your broadband. The reasons for slow broadband can range from your wireless hardware, an old PC, your house architecture, your Router, and even your phone line. All these things can have a huge impact on your Internet speed. It's just a case of knowing what to look for and putting it right quickly and easily. I've been a telecommunications engineer since 1995 working for a family business and we have had a huge range of various telephone projects and issues to solve in business premises and also in the home. We have networked over 300 data points for some companies right down to a single data point for a senior citizen who wanted their router moved upstairs. Plus everything in between from people operating from fly leads to switches to showcase patch panels in data centres. You get a sense of what to look for and how to solve a problem thoroughly and quickly. When we were working in house premises we sometimes discovered the customer had spent thousands of pounds/dollars on buying new equipment to get round their slow broadband which had made absolutely no difference at all. It was then usually something like the incoming phone line being the cause of the problem. So from the get-go this book can potentially save you a lot of wasted money and time running around when I can tell you how to look for the problems. I've also written a number of other books on telecommunications and specifically cabling hard-wired networks rather than using Wi-Fi which is much faster. However I wanted to also write a book that was specifically for Wi-Fi since in some cases hard-wiring isn't a

feasible option. Broadband and Wi-Fi problems can stare us in the face, but sometimes we need a fellow engineer to say 'have you checked this?' and that is what this book is - a helpful guide to solve your Wi-Fi issues and speed up your connection. Before we even get into the rest of the book - let's check our Broadband speed right now. With everything as it is with whatever you're using. You can go onto websites like 'Speed Checker' and it will tell you your maximum upload and download speed. This is a barometer for us to know where we stand right now and gives us a point of reference to improve upon. Write both numbers down. Okay done that? We now have our current speed - now let's improve it! Scroll back up and click on the book!

**Perl & LWP** Sean M. Burke,2002-06-20 Perl soared to popularity as a language for creating and managing web content, but with LWP (Library for WWW in Perl), Perl is equally adept at consuming

information on the Web. LWP is a suite of modules for fetching and processing web pages. The Web is a vast data source that contains everything from stock prices to movie credits, and with LWP all that data is just a few lines of code away. Anything you do on the Web, whether it's buying or selling, reading or writing, uploading or downloading, news to e-commerce, can be controlled with Perl and LWP. You can automate Web-based purchase orders as easily as you can set up a program to download MP3 files from a web site. Perl & LWP covers: Understanding LWP and its design Fetching and analyzing URLs Extracting information from HTML using regular expressions and tokens Working with the structure of HTML documents using trees Setting and inspecting HTTP headers and response codes Managing cookies Accessing information that requires authentication Extracting links Cooperating with proxy caches Writing web spiders (also known as robots) in a safe fashion Perl & LWP includes many step-by-step examples that show how to apply the various techniques. Programs to extract information from the web sites of BBC News, Altavista, ABEBooks.com, and the Weather Underground, to name just a few, are explained in detail, so that you understand how and why they work. Perl programmers who want to automate and mine the web can pick up this book and be immediately productive. Written by a contributor to LWP, and with a foreword by one of LWP's creators, Perl & LWP is the authoritative guide to this powerful and popular toolkit.

**No Local** Greg Sharzer, 2012-04-27 Can making things smaller make the world a better place? No Local takes a critical look at localism, an ideology that says small businesses, ethical shopping and community initiatives like gardens and farmers' markets can stop corporate globalization. These small acts might make life better for some, but they don't challenge the drive for profit that's damaging our communities and the earth. No Local shows how localism's fixation on small comes from an outdated economic model. Growth is built into capitalism. Small firms must play by the same

rules as large ones, cutting costs, exploiting workers and damaging the environment. Localism doesn't ask who controls production, allowing it to be co-opted by governments offloading social services onto the poor. At worst, localism becomes a strategy for neoliberal politics, not an alternative to it. No Local draws on political theory, history, philosophy and empirical evidence to argue that small isn't always beautiful. Building a better world means creating local social movements that grow to challenge, not avoid, market priorities.

Growth, Structural Transformation, and Rural Change in Viet Nam Finn Tarp, 2017 Many developing countries-Viet Nam included-continue to struggle to raise incomes per capita. A common feature of the growth and development process is a fundamental change in the pattern of economic activity, as households reallocate labour from traditional agriculture to more productive forms of agriculture and modern industrial and service sectors. Broad structural transformation and widespread poverty reduction is the combined result of these large-scale shifts in work and labour allocation when they realise desired development goals. The roots of this volume grow from when the first pilot Viet Nam Access to Resources Household Survey (VARHS) was carried out in 2002. The success of this inspired the Central Institute of Economic Management (CIEM) in Hanoi, the Institute of Policy and Strategy for Agriculture and Rural Development (CAP-IPSARD), the Institute of Labour Science and Social Affairs (ILSSA), and the Development Economics Research Group (DERG) of the University of Copenhagen, together with Danida and later on UNU-WIDER, to plan and carry out a more ambitious VARHS from 2006, increasing coverage and representativeness to more than 2,150 families and 12 provinces across the various regions of Viet Nam. The VARHS covering these very same households had by 2014 been carried out five times, i.e. every two years. It is on this high quality panel data foundation and almost 15 years of study and policy work using the VARHS data the present volume builds, in its effort to bring out the essential rural micro-economic characteristics and insights of a dynamic South-East Asian economy in transition from a centrally planned towards a more market based economy.

**Time-Sensitive Remote Sensing** Christopher D. Lippitt,Douglas A. Stow,Lloyd L. Coulter,2015-06-02 This book documents the state of the art in the use of remote sensing to address time-sensitive information requirements. Specifically, it brings together a group of authors who are both researchers and practitioners, who work toward or are currently using remote sensing to address time-sensitive information requirements with the goal of advancing the effective use of remote sensing to supply time-sensitive information. The book addresses the theoretical implications of time-sensitivity on the remote sensing process, assessments or descriptions of methods for expediting the delivery and improving the quality of information derived from remote sensing, and describes and analyzes time-sensitive remote sensing applications, with an emphasis on lessons learned. This book is intended for remote sensing scientists, practitioners (e.g., emergency responders or administrators of emergency response agencies), and students, but will also be of use to those seeking to understand the potential of remote sensing to address a range of pressing issues,

particularly natural and anthropogenic hazard response.
