Night Noise Guidelines for Europe Charlotte Hurtley, 2009 The WHO Regional Office for Europe set up a working group of experts to provide scientific advice to the Member States for the development of future legislation and policy action in the area of assessment and control of night noise exposure. The working group reviewed available scientific evidence on the health effects of night noise, and derived health-based guideline values. In December 2006, the working group and stakeholders from industry, government and nongovernmental organizations reviewed and reached general agreement on the guideline values and key texts for the final document of the Night noise guidelines for Europe.

Considering the scientific evidence on the thresholds of night noise exposure indicated by Lnight,outside [L suffix night,outside] as defined in the Environmental Noise Directive (2002/49/EC), an Lnight, outside of 40 dB should be the target of the night noise guideline (NNG) to protect the public, including the most vulnerable groups such as children, the chronically ill and the elderly. Lnight,outside value of 55 dB is recommended as an interim target for the countries where the NNG cannot be achieved in the short term for various reasons, and where policy-makers choose to adopt a stepwise approach. These guidelines are applicable to the Member States of the European Region, and may be considered as an extension to, as well as an update of, the previous WHO Guidelines for community noise (1999). Climate Change Impacts and Adaptation for Transport Networks and Nodes United Nations Publications,2020-04-14 This report presents the analyses of several climate variables relevant to transport networks and nodes within the ECE region. Regional maps have been produced in Geographical Information System (GIS) format, showing the main transportation networks, which have been overlain by the spatial distribution of the climate change projections, thereby presenting an initial perspective of areas of potential risk which could warrant more in-depth assessment. The Group of Experts has also reviewed and presented country experiences in the form of case studies,

demonstrating a range of efforts that have been undertaken to analyse climate change impacts on transport assets and operations. With its work, the Group of Experts wishes to raise awareness on the importance of considering climate change and extreme weather (for example, in planning, construction, maintenance and operations) and of strengthening the climate resilience of inland transport assets, networks and nodes. It also aims to stimulate the continuation of work to establish the necessary analytical basis to facilitate local or regional assessments, leading to the identification of specific transport assets at risk which may require adaptation efforts. The Group of Experts, within this report, also formulated a series of lessons learned which have served as a basis to recommend future action at national and international levels towards improved transportation system climate resilience.
