Research in Accounting Regulation Gary Previts,Tom Robinson,2004-09-17 The scope of service provided by professional accountants is influenced by legislation and case law as well as the dictates of a variety of government and private sector agencies: including State Boards of Accountancy, Academic Accreditation Bodies, the United States Securities and Exchange Commission, the Public Company Accounting Oversight Board, independent standard setting bodies such as the Federal Accounting Standards Advisory Board (US), the Financial Accounting Standards Board (US), the International Accounting Standards Board and self-regulatory organizations such as State Societies of CPA and the American Institute of Certified Public Accountants. There are equivalent and emerging local international bodies that exist in most developed countries. It is important for academics, students, practitioners, regulators and researchers to consider, study and understand the role and relationship of such bodies with the practice and content of our discipline. Research in Accounting Regulation is a refereed annual serial that seeks to publish high quality manuscripts, which address regulatory issues and policy affecting the practice of accountancy, broadly defined. Topics of interest include research based on: 1) Self-regulatory activities. 2) Case law and litigation. 3) Governmental and quasi-governmental regulation. 4) The economics of regulation, including modelling. This research series aims to encourage the submission of original empirical, behavioural or applied research manuscripts that consider strategic and policy implications for regulation, regulatory models and markets. It is intended for individual researchers, practitioners, regulators and students of accountancy who desire to increase their understanding of the regulation of accountancy.

Sports Nicknames Terry W. Pruyne,2002 When did Michael Jordan become Air Jordan? How did Earvin Johnson come to be known as Magic? Why is Juan Rodriguez called Chi Chi? These questions are answered in this reference work featuring about 20,000 nicknames of professional athletes from around the world. Part One is subdivided into sections for each sport; baseball, basketball, football, hockey and miscellaneous sports (mainly individual sports or ones not listed in the four main sections)--under which entries are alphabetized by players' given names. The entries in Part One tell the player's position, team, year of retirement, and--in as many instances as extensive research could afford--how the player got his or her nickname. Part Two offers the opposite access alphabetized by nickname and giving players' names and their sport.

Reporting Non-GAAP Financial Measures Nicola Moscariello, Michele Pizzo, 2019-11-25 The use of alternative performance indicators (APMs) (also known as ‘Non-GAAP’ earnings) is a widespread phenomenon, and the increased reliance on APMs has recently triggered a strong debate among regulators, managers and investors on the nature of these ‘tailored’ earnings and on the economic reasons behind them. On one hand, APMs might reflect managers’ attempt to offer useful information to predict companies’ future sustainable cash-flows and earnings (information hypothesis), while, on the other, the non-standardized nature of these metrics impacts on the comparability of the financial results, and reduces the reliability and the faithful representation of financial information (opportunistic hypothesis). By collecting several theoretical and empirical contributions on APMs, this book provides a number of interesting and useful insights on the economics of APMs and their impact on financial markets.

Lectures in Feedback Design for Multivariable Systems Alberto Isidori, 2016-08-12 This book focuses on methods that relate, in one form or another, to the “small-gain theorem”. It is aimed at readers who are interested in learning methods for the design of feedback laws for linear and nonlinear multivariable systems in the presence of model uncertainties. With worked examples throughout, it includes both introductory material and more advanced topics. Divided into two parts, the first covers relevant aspects of linear-systems theory, the second, nonlinear theory. In order to deepen readers’ understanding, simpler single-input-single-output systems generally precede treatment of more complex multi-input-multi-output (MIMO) systems and linear systems precede nonlinear systems. This approach is used throughout, including in the final chapters, which explain the latest advanced ideas governing the stabilization, regulation, and tracking of nonlinear MIMO systems. Two major design problems are considered, both in the presence of model uncertainties: asymptotic stabilization with a “guaranteed region of attraction” of a given equilibrium point and asymptotic rejection of the effect of exogenous (disturbance) inputs on selected regulated outputs. Much of the introductory instructional material in this book has been developed for teaching students, while the final coverage of nonlinear MIMO systems offers readers a first coordinated treatment of completely novel results. The worked examples presented provide the instructor with ready-to-use material to help students to understand the mathematical theory. Readers should be familiar with the fundamentals of linear-systems and

control theory. This book is a valuable resource for students following postgraduate programs in systems and control, as well as engineers working on the control of robotic, mechatronic and power systems.

Living with Dignity Elna Mouton, Gertrude Kapuma, Len Hansen, Thomas Togom, 2015-01-01 By addressing gender equality as a fundamental expression of human dignity and justice on our continent, this collage of ? essays [by 14 women and 6 men], is meant to serve as a concrete alternative to aspects of gender inequality ? Its format is particularly devised for use in the classroom, and for critical-constructive group engagement. It is our sincere prayer that it will also be used in imaginative ways by clergy and in congregations as a necessary part of adult learning programmes.

Organic Christianity Ron McIntosh, 2012-01-17 Jesus + Nothing = Everything! “The glory of God is man fully alive.” Have you ever wondered why the most powerful entity on the planet, the Kingdom of God, doesn’t work like it should? Why don’t we see more people reached, touched, delivered, healed, and whole? Why are so many Christians bound, stagnated, frustrated, and lacking change? Could it be that we’ve lost the organic essence of the Gospel? Somehow we’ve taken the most powerful message on the planet and turned it into religion. Organic Christianity is a call back to intimacy with God that will free us to find the life we were born to live. When you see the real, organic message of the Gospel, it will liberate you to find a life fully alive. This book will cause you to see the organic meaning of love, grace, righteousness, and faith that will move you into the fullness of God’s Kingdom. You will learn: · God’s not mad at you—He loves you unconditionally. · How to position yourself for the New Reformation. · How to find the life you were born to live. · How to manifest God’s Kingdom through grace, righteousness, and faith. Organic Christianity challenges us to strip away all our traditions and lists of “dos and don’ts” and get back to basics. Pure, unadulterated, “no additives or preservatives” Christianity! The simplest equation in the world is: Jesus + Nothing = Everything!
