Global Value Chains in a Postcrisis World Olivier Cattaneo, Gary Gereffi, Cornelia Staritz, 2010 The book looks to address the following questions in a post-crisis world: How have lead firms responded to the crisis? Have they changed their traditional supply chain strategy and relocated and/or outsourced part of their production? How will those changes affect developing countries? What should be the policy responses to these changes?

Structural Genomics Yu Wai Chen, 2013-11-09 The field of Structural Genomics has produced many technological advances that transform and accelerate structure solution and analysis. Structural Genomics: General Applications emphasizes the benefits to the wider structural research community. It also reflects the current trend in tackling the more ambitious challenges of studying macromolecular machineries and complexes. Divided into three convenient sections, topics include the cloning and production of proteins for structural studies, experimental methods, and computational methods and data analysis. Written in the successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Structural Genomics: General Applications aims primarily to channel spin-off technologies to the average structural biologist in a small or medium-sized laboratory.

How much energy is released in ATP hydrolysis? How many mRNAs are in a cell? How genetically similar are two random people? What is faster, transcription or translation? Effective Crisis Response and Openness Simon J. Evenett, Bernard M. Hoekman, Olivier Cattaneo, 2009-01-01 The world has now faced the most severe global economic crisis since the Great Depression of the 1930s. Governments have responded to the crisis with many initiatives, often with implications for the openness of their national economies to global markets. While the primary objectives have been to support demand and thus economic activity and employment, recognition of cross-border spillovers has led to calls for international cooperation and to refrain from beggar-thy-neighbour measures. Arguably these calls have been heard. Efforts have been made to coordinate policy responses, through the G20 and other fora. As recovery becomes an ever greater prospect in late 2009, the question arises as to whether current, primarily non-binding inter-governmental cooperation will be sustained. Protectionist pressures may increase as trade recovers, imports into markets expand, and job growth still lags. Also, many governments are left with little margin for manoeuvre in fiscal and monetary policy, and in the event of an economic relapse, trade and industrial policies threaten to become the default stop-gap. The purpose of this book is to examine the ways in which the existing manifestations of openness, including binding international accords, have constrained or enhanced the options available to national policymakers during the crisis and influenced the degree, and potentially even the effectiveness, of cross-border cooperation. By examining state responses during the crisis in a number of distinct policy domains, the different chapters reveal potential complementarities and tensions as governments seek to tackle sharp national recessions while being mindful of the growing role that the international dimension has played in influencing national economies in an era of globalization.

On the Noodle Road Jen Lin-Liu, 2013-07-25 A food writer travels the Silk Road, immersing herself in a moveable feast of foods and cultures and discovering some surprising truths about commitment, independence, and love. As a newlywed traveling in Italy, Jen Lin-Liu was struck by culinary echoes of the delicacies she ate and cooked back in China, where she'd lived for more than a decade. Who really invented the noodle? she wondered, like many before her. But also: How had food and culture moved along the Silk Road, the ancient trade route linking Asia to Europe—and what could still be felt of those long-ago migrations? With her new husband's blessing, she set out to discover the connections, both historical and personal, eating a path through western China and on into Central Asia, Iran, Turkey, and across the Mediterranean. The journey takes Lin-Liu into the private kitchens where the headscarves come off and women not only knead and simmer but also confess and confide. The thin rounds of dough stuffed with meat that are dumplings in Beijing evolve into manti in Turkey—their tiny size the measure of a bride's worth—and end as tortellini in Italy. And as she stirs and samples, listening to the women talk about their lives and longings, Lin-Liu gains a new appreciation of her own marriage, learning to savor the sweetness of love freely chosen.

The Tobacco Wars Walter Adams, James W. Brock, 1999 Designed as a supplement for either Principles or Intermediate Microeconomics, The Tobacco Wars is an interesting and unique way to illustrate the concepts of microeconomics as applied to real-life, current events. Not only does this lively discussion of the tobacco litigation provide insight into the recent and historical controversies, but it also follows along with the concepts taught in microeconomics.

Ultimate Limit State Design of Steel-Plated Structures Jeom Kee Paik, Anil Kumar Thayamballi, 2003-03-28 Steel plated structures are important in a variety of marine and land-based applications, including ships, offshore platforms, power and chemical plants, box girder bridges and box girder cranes. The basic strength members in steel plated structures include support members (such as stiffeners and plate girders), plates, stiffened panels/grillages and box girders. During their lifetime, the structures constructed using these members are subjected to various types of loading which is for the most part operational, but may in some cases be extreme or even accidental. Ultimate Limit State Design of Steel Plated Structures reviews and describes both fundamentals and practical design procedures in this field. The derivation of the basic mathematical expressions is presented together with a thorough discussion of the assumptions and the validity of the underlying expressions and solution methods. Particularly valuable coverage in the book includes: * Serviceability and the ultimate limit state design of steel structural systems and their components * The progressive collapse and the design of damage tolerant structures in the context of marine accidents * Age related structural degradation such as corrosion and fatigue cracks Furthermore, this book is also an easily accessed design tool which facilitates learning by applying the concepts of the limit states for practice using a set of computer programs which can be downloaded. In addition, expert guidance on mechanical model test results as well as nonlinear finite element solutions, sophisticated design methodologies useful for practitioners in industries or research institutions, selected methods for accurate and efficient analyses of nonlinear behavior of steel plated structures both up to and after the ultimate strength is reached, is provided. Designed as both a textbook and a handy reference, the book is well suited to teachers and university students who are approaching the limit state design technology of steel plated structures for the first time. The book also meets the needs of structural designers or researchers who are involved in civil, marine and mechanical engineering as well as offshore engineering and naval architecture.

Global Economic Prospects 2010 World Bank, 2010-02-12 “The crisis has deeply impacted virtually every economy in the world, and although growth has returned, much progress in the fight against poverty has been lost. More difficult international conditions in the years to come will mean that developing countries will have to place even more emphasis on improving domestic economic conditions to achieve the kind of growth that can durably eradicate poverty.” Justin Yifu Lin, Chief Economist and Senior Vice President The World Bank 'Global Economic Prospects 2010: Crisis, Finance, and Growth' explores both the short- and medium-term impacts of the financial crisis on developing countries. Although global growth has resumed, the recovery is fragile, and unless business and consumer demand strengthen, the world economy could slow down again. Even if, as appears likely, a double-dip recession is avoided, the recovery is expected to be slow. High unemployment and widespread restructuring will continue to characterize the global economy for the next several years. Already, the crisis has provoked large-scale human suffering. Some 64 million more people around the world are expected to be living on less than a \$1.25 per day by the end of 2010, and between 30,000 and 50,000 more infants may have died of malnutrition in 2009 in Sub-Saharan Africa, than would have been the case if the crisis had not occurred. Over the medium term, economic growth is expected to recover. But increased risk aversion, a necessary and desirable tightening of financial regulations in high-income countries, and measures to reduce the exposure of developing economies to external shocks are likely to make finance scarcer and more costly than it was during the boom period. As a result, just as the ample liquidity of the early 2000s prompted an investment boom and an acceleration in developing-country potential output, higher costs

will likely yield a slowing in developing-country potential growth rates of between 0.2 and 0.7 percentage points, and as much as an 8 percent decline in potential output over the medium term. In the longer term, however, developing countries can more than offset the implications of more expensive international finance by reducing the cost of capital channeled through their domestic financial markets. Commodity Chains and Global Capitalism Gary Gereffi,Miguel Korzeniewicz,1994 Commodity chains link the processes of manufacturing that result in a final product available for individual consumption. This book explores the global commodity chains approach, which reformulates the basic conceptual categories for analysing patterns of global organisation and change.

Radio Girl David Dufty,2020-04-28 All around Australia, former WRANs and navy men regard the woman they know as Mrs Mac with a level of reverence usually reserved for saints. Yet today no-one has any idea of who she was and how she rescued Australia's communication systems in World War II. Winner, Best 2020 Non-fiction, ACT Notable Awards As you climbed the rickety stairs of an old woolshed at Sydney harbour in 1944, you would hear the thrum of clicks and buzzes. Rows of men and women in uniforms and headsets would be tapping away vigorously at small machines, under the careful watch of their young female trainers. Presiding over the cacophony was a tiny woman, known to everyone as 'Mrs Mac', one of Australia's wartime legends. A smart girl from a poor mining town who loved to play with her father's tools, Violet McKenzie became an electrical engineer, a pioneer of radio and a successful businesswoman. As the clouds of war gathered in the 1930s, she defied convention and trained young women in Morse code, foreseeing that their services would soon be sorely needed. Always a champion of women, she was instrumental in getting Australian women into the armed forces. Mrs Mac was adored by the thousands of young women and men she trained, and came to be respected by the defence forces and the public too for her vision and contribution to the war effort. David Dufty brings her story to life in this heartwarming and captivating biography. '[An] incredible and inspiring life... Dufty's new biography captures her unwavering dedication in the face of adversity.' - Professor Genevieve Bell, Australian National University 'A cracking story about the famous Australian radio engineer you've never heard of.' - Dick Smith, entrepreneur and philanthropist

Education and the Commercial Mindset Samuel E. Abrams,2016-04-25 The movement to privatize K-12 education is stronger than ever. Samuel Abrams examines the rise of market forces in public education and reveals how a commercial mindset that sidesteps fundamental challenges has taken over. Nevertheless, public schools should adopt lessons from the business world, such as raising teacher salaries to attract talent.

Trade and Employment in the Global Crisis Marion Jansen,Erik von Uexküll,2010 Based on the findings of ILO-sponsored studies of employment impacts in Brazil, Egypt, India, Liberia, South Africa, Uganda and Ukraine during the global crisis, this book analyses how cross-border trade has acted as a transmission channel, spreading the crisis to developing and emerging economies. Key topics covered include the role of export concentration in increasing labour markets' vulnerability to trade shocks, the effects of global price volatility on household and company investment decisions, the impact of the global slowdown on workers' and governments' bargaining power and the impact of negative trade shocks on gender inequality. The book reviews the suitability of the different policy instruments that countries have applied during the crisis. The authors conclude that in countries where effective policy instruments were in place before the crisis, these acted as an automatic buffer that could be easily scaled up. Book jacket.
