The think pieces argue for a learning society as a major driver of change with far-reaching influence on learning to serve the needs of economies and societies. The book is a testimonial to the importance of ‘learning communities.’ It highlights the pivotal role that can be played by non-traditional actors such as city and urban planners, citizens, transport professionals, and technology companies. This collection seeks to contribute to the discourse on strengthening the fabric of a learning society crucial for future economic and social development, particularly in the aftermath of the coronavirus disease.

**Virtual Ethnicity** Linda Leung,2017-09-08 Where is the ethnic minority presence in cyberspace? In this book, Linda Leung makes a pioneering exploration of ethnic minority presence in cyberspace. She finds that despite the apparent white, Western, male, middle class profile of cyberspace, there is significant ethnic minority activity. The work draws on the author’s empirical research amongst ethnic minority women and incorporates discussion of media and web-texts from the US, Canada, Britain and Australia. This is a fascinating interdisciplinary examination of the web-participation of ethnic communities, which sheds light on how ethnic identities are articulated in cyberspace and contemporary society in both predictable and surprising ways.

**A Handbook of Theories on Designing Alignment Between People and the Office Environment** Rianne Appel-Meulenbroek,Vitalija Danivska,2021-06-16 Although workplace design and management are gaining more and more attention from modern organizations, workplace research is still very fragmented and spread across multiple disciplines in academia. There are several books on the market related to workplaces, facility management (FM), and corporate real estate management (CREM) disciplines, but few open up a theoretical and practical discussion across multiple theories from different fields of studies. Therefore, workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied. A lot of knowledge is lost between disciplines, and sadly, many insights do not reach workplace managers in practice. Therefore, this new book series is started by associate professor Rianne Appel-Meulenbroek (Eindhoven University of Technology, the Netherlands) and postdoc researcher Vitalija Danivska (Aalto University, Finland) as editors, published by Routledge. It is titled ‘Transdisciplinary Workplace Research and Management’ because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice. The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace-related issues in practice, such as knowledge worker productivity, office use, and more strategic workplace management. In addition, the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice. This book series is relevant for workplace experts both in academia and industry. This first book in the series focuses on the employee as a user of the work environment. The 21 theories discussed and applied to workplace design in this book address people’s ability to do their job and thrive in relation to the office workplace. Some focus more on explaining why people behave the way they do (the psychosocial environment), while others take the physical and/or digital workplace quality as a starting point to explain employee outcomes such as health, satisfaction, and performance. They all explain different aspects for achieving employee-workplace alignment (EWA) and thereby ensuring employee thriving. The final chapter describes a first step towards integrating these theories into an overall interdisciplinary framework for eventually developing a grand EWA theory. *Re-Imagining Doctoral Writing* Cecile Badenhorst,Brittany Amell,James Burford,2021 Re-imagining Doctoral Writing explores doctoral writing within a context where doctoral education is undergoing enormous transformation. Despite the importance attributed to doctoral writing for developing scholars, we have a limited understanding of the extent to which conceptualizations of doctoral writing are shared or contested, how ideas of doctoral writing have

shifted over time, or where imaginings of the future of doctoral writing might take us. Drawing on historical studies that show how understandings of doctoral writing and doctoral writers have changed over time-as well as considering how doctoral writing has changed as we have moved into the 21st century-the contributors to this volume pursue these areas and explore what might happen if we begin thinking about doctoral writing without imagining a vast absence in front of us. By proceeding from a place in which doctoral writing is seen as a rich and increasingly deep area of scholarship, this book offers tools and approaches that expand and enliven conceptions of what doctoral writing might become and how it might be researched--

*Doctoral Writing* Susan Carter,Cally Guerin,Claire Aitchison,2020-01-01 This book on doctoral writing offers a refreshingly new approach to help Ph.D. students and their supervisors overcome the host of writing challenges that can make—or break—the dissertation process. The book’s unique contribution to the field of doctoral writing is its style of reflection on ongoing, lived practice; this is more readable than a simple how-to book, making it a welcome resource to support doctoral writing. The experiences and practices of research writing are explored through bite-sized vignettes, stories, and actionable ‘teachable’ accounts.Doctoral Writing: Practices, Processes and Pleasures has its origins in a highly successful academic blog with an international following. Inspired by the popularity of the blog (which had more than 14,800 followers as of October 2019) and a desire to make our six years’ worth of posts more accessible, this book has been authored, reworked, and curated by the three editors of the blog and reconceived as a conveniently structured book.

**Brain Art** Anton Nijholt,2019-05-25 This is the first book on brain-computer interfaces (BCI) that aims to explain how these BCI interfaces can be used for artistic goals. Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art. Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi-sensorial (audio, visual, tactile) piece of art. Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression. We can also stimulate brain activity. It can be evoked externally by exposing our brain to external events, whether they are visual, auditory, or tactile. Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design, implement, or adapt an artistic performance, or interactive installation. Stimulating brain activity can also be done internally. Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision. The chapters in this book have been written by researchers in human-computer interaction, brain-computer interaction, neuroscience, psychology and social sciences, often in cooperation with artists using BCI in their work. It is the perfect book for those seeking to learn about brain-computer interfaces used for artistic applications.
