### **Souls in the Great Machine** Sean McMullen, 2002-12-15

The great Calculator of Libris was forced to watch as Overmayor Zarvora had four of its components lined up against a wall and shot for negligence. Thereafter, its calculations were free from errors, and

that was just as well-for only this strangest of calculating machines and its two thousand enslaved components could save the world from a new ice age. And all the while a faint mirrorsun hangs in the night sky, warning of the cold to come. In Sean McMullen's glittering, dynamic, and exotic world two millennia from now, there is no more electricity, wind engines are leading-edge technology, librarians fight duels to settle disputes, steam power is banned by every major religion, and a mysterious siren Call lures people to their death. Nevertheless, the brilliant and ruthless Zarvora intends to start a war in space against inconceivably ancient nuclear battle stations. Unbeknownst to Zarvora, however, the greatest threat to humanity is neither a machine nor a force but her demented and implacable enemy Lemorel, who has resurrected an obscene and evil concept from the distant past: Total War. Souls in the Great Machine is the first volume of Sean McMullen's brilliant future history of the world of Greatwinter. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

*Upgrading and Repairing PCs* Scott Mueller, 2000 *Upgrading and Repairing PCs, Linux Edition* addresses Linux-specific hardware issues that do not arise with Windows or DOS. Based on *Upgrading and Repairing PCs, 11th Edition*, this book covers Linux information such as system requirements, installation and setup, drive partitioning, kernel parameters, memory, and compatibility between Linux and components and components with each other. While Windows has a slick installation that automatically determines most of the hardware in a PC, Linux users still must struggle to identify, configure, and install the hardware in their PCs. This book is an essential reference to understand how your PC hardware works, how it interacts with Linux, and how to troubleshoot, repair, and upgrade the components in a Linux system.

Digital Copyright Jessica Litman, Professor Litman's work stands out as well-researched, doctrinally solid, and always

piercingly well-written.-JANE GINSBURG, Morton L. Janklow  
 Professor of Literary and Artistic Property, Columbia  
 UniversityLitman's work is distinctive in several respects: in her  
 informed historical perspective on copyright law and its legislative  
 policy; her remarkable ability to translate complicated copyright  
 concepts and their implications into plain English; her willingness  
 to study, understand, and take seriously what ordinary people  
 think copyright law means; and her creativity in formulating  
 alternatives to the copyright quagmire. -PAMELA SAMUELSON,  
 Professor of Law and Information Management; Director of the  
 Berkeley Center for Law & Technology, University of California,  
 BerkeleyIn 1998, copyright lobbyists succeeded in persuading  
 Congress to enact laws greatly expanding copyright owners'  
 control over individuals' private uses of their works. The efforts to  
 enforce these new rights have resulted in highly publicized legal  
 battles between established media and new upstarts.In this  
 enlightening and well-argued book, law professor Jessica Litman  
 questions whether copyright laws crafted by lawyers and their  
 lobbyists really make sense for the vast majority of us. Should  
 every interaction between ordinary consumers and copyright-  
 protected works be restricted by law? Is it practical to enforce such  
 laws, or expect consumers to obey them? What are the effects of  
 such laws on the exchange of information in a free  
 society?Litman's critique exposes the 1998 copyright law as an  
 incoherent patchwork. She argues for reforms that reflect common  
 sense and the way people actually behave in their daily digital  
 interactions.This paperback edition includes an afterword that  
 comments on recent developments, such as the end of the  
 Napster story, the rise of peer-to-peer file sharing, the escalation  
 of a full-fledged copyright war, the filing of lawsuits against  
 thousands of individuals, and the June 2005 Supreme Court  
 decision in the Grokster case.Jessica Litman (Ann Arbor, MI) is  
 professor of law at Wayne State University and a widely  
 recognized expert on copyright law.

**Video Mining** Azriel Rosenfeld, David S. Doermann, Daniel DeMenthon, 2003-08-31 Video Mining is an essential reference for the practitioners and academicians in the fields of multimedia search engines. Half a terabyte or 9,000 hours of motion pictures are produced around the world every year. Furthermore, 3,000 television stations broadcasting for twenty-four hours a day produce eight million hours per year, amounting to 24,000 terabytes of data. Although some of the data is labeled at the time of production, an enormous portion remains unindexed. For practical access to such huge amounts of data, there is a great need to develop efficient tools for browsing and retrieving content of interest, so that producers and end users can quickly locate specific video sequences in this ocean of audio-visual data. Video Mining is important because it describes the main techniques being developed by the major players in industry and academic research to address this problem. It is the first time research from these leaders in the field developing the next-generation multimedia search engines is being described in great detail and gathered into a single volume. Video Mining will give valuable insights to all researchers and non-specialists who want to understand the principles applied by the multimedia search engines that are about to be deployed on the Internet, in studios' multimedia asset management systems, and in video-on-demand systems.
