Introduction to Biometrics Anil K. Jain, Arun A. Ross, Karthik Nandakumar, 2011-11-18 Biometric recognition, or simply biometrics, is the science of establishing the identity of a person based on physical or behavioral attributes. It is a rapidly evolving field with applications ranging from securely accessing one's computer to gaining entry into a country. While the deployment of large-scale biometric systems in both commercial and government applications has increased the public awareness of this technology, *Introduction to Biometrics* is the first textbook to introduce the fundamentals of Biometrics to undergraduate/graduate students. The three commonly used modalities in the biometrics field, namely, fingerprint, face, and iris are covered in detail in this book. Few other modalities like hand geometry, ear, and gait are also discussed briefly along with advanced topics such as multibiometric systems and security of biometric systems. Exercises for each chapter will be available on the book website to help students gain a better understanding of the topics and obtain practical experience in designing computer programs for biometric applications. These can be found at: <http://www.csee.wvu.edu/~ross/BiometricsTextBook/>. Designed for undergraduate and graduate students in computer science and electrical engineering, *Introduction to Biometrics* is also suitable for researchers and biometric and computer security professionals.

Amputation in Literature and Film Erik Grayson, Maren Scheurer, 2021-08-10 *Amputation in Literature and Film: Artificial Limbs, Prosthetic Relations, and the Semiotics of "Loss"* explores the many ways in which literature and film have engaged with the subject of amputation. The scholars featured in this volume draw upon a wide variety of texts, both lesser-known and canonical, across historical periods and language traditions to interrogate the intersections of disability studies with social, political, cultural, and philosophical concerns. Whether focusing on ancient texts by Zhuangzi or Ovid, renaissance drama, folktales collected by the Brothers Grimm, novels or silent film, the chapters in this volume highlight the dialectics of "loss" and "gain" in narratives of amputation to encourage critical dialogue and forge an integrated, embodied understanding of experiences of impairment in which mind and body, metaphor and materiality, theory and politics are considered as interrelated and interacting aspects of disability and ability.

Biometric Authentication Massimo Tistarelli,Josef Bigun,Anil Jain,2002-05-17 Biometric authentication refers to identifying an individual based on his or her distinguishing physiological and/or behavioral characteristics. It associates an individual with a previously determined identity based on that individual s appearance or behavior. Because many physiological or behavioral characteristics (biometric indicators) are distinctive to each person, biometric identifiers are inherently more reliable and more capable than knowledge-based (e.g., password) and token-based (e.g., a key) techniques in differentiating between an authorized person and a fraudulent impostor. For this reason, more and more organizations are looking to automated identity authentication systems to improve customer satisfaction, security, and operating efficiency as well as to save critical resources. Biometric authentication is a challenging pattern recognition problem; it involves more than just template matching. The intrinsic nature of biometric data must be carefully studied, analyzed, and its properties taken into account in developing suitable representation and matching algorithms. The intrinsic variability of data with time and environmental conditions, the social acceptability and invasiveness of acquisition devices, and the facility with which the data can be counterfeited must be considered in the choice of a biometric indicator for a given application. In order to deploy a biometric authentication system, one must consider its reliability, accuracy, applicability, and efficiency. Eventually, it may be necessary to combine several biometric indicators (multimodal-biometrics) to cope with the drawbacks of the individual biometric indicators.
