Practical TLA+ Hillel Wayne,2018-10-11 Learn how to design complex, correct programs and fix problems before writing a single line of code. This book is a practical, comprehensive resource on TLA+ programming with rich, complex examples. Practical TLA+ shows you how to use TLA+ to specify a complex system and test the design itself for bugs. You'll learn how even a short TLA+ spec can find critical bugs. Start by getting your feet wet with an example of TLA+ used in a bank transfer system, to see how it helps you design, test, and build a better application. Then, get some fundamentals of TLA+ operators, logic, functions, PlusCal, models, and concurrency. Along the way you will discover how to organize your blueprints and how to specify distributed systems and eventual consistency. Finally, you'll put what you learn into practice with some working case study applications, applying TLA+ to a wide variety of practical problems: from algorithm performance and data structures to business code and MapReduce. After reading and using this book, you'll have what you need to get started with TLA+ and how to use it in your mission-critical applications. What You'll LearnRead and write TLA+ specsCheck specs for broken invariants, race conditions, and liveness bugsDesign concurrency and distributed systemsLearn how TLA+ can help you with your day-to-day production work Who This Book Is For Those with programming experience who are new to design and to TLA+. /div

Think Bayes Allen B. Downey,2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

Rice Almanac, 4th edition J. Maclean,B. Hardy,G.

Hettel,2013-12-01 This fourth edition of the Rice Almanac continues the tradition of the first three editions by showcasing rice as the most important staple food in the world and all that is involved in maintaining rice production. It also breaks new ground in its coverage of issues related to rice production, both environmental--including climate change--and its importance for food security and the global economy. It also further expands coverage of the world's rice production area by featuring 80 rice-producing countries around the world.

The Limits of Market Organization Richard R. Nelson, 2005-03-24 The last quarter century has seen a broad, but qualified, belief in the efficacy of market organization slide into an

unyielding dogma that the market, as unconstrained as possible, is the best way to govern virtually all economic activity. However, unrestricted markets can often lead to gross inequalities in access to important resources, the creation of monopolies, and other negative effects that require regulation or public subsidies to remedy. In *The Limits of Market Organization*, editor Richard Nelson and a group of economic experts take a more sophisticated look at the public/private debate, noting where markets are useful, where they can be effective only if augmented by non-market mechanisms, and where they are simply inappropriate. *The Limits of Market Organization* examines the appropriateness of markets in four areas where support for privatization varies widely: human services, public utilities, science and technology, and activities where market involvement is altogether inappropriate. Richard Murnane makes the case that a social interest in providing equal access to high quality education means that for school voucher plans to be effective, substantial government oversight is necessary. Federal involvement in a transcontinental railroad system was initially applauded, but recent financial troubles at Amtrak have prompted many to call for privatization of the rails. Yet contributor Elliot Sclar argues that public subsidies are the only way to maintain this vital part of the American transportation infrastructure. While market principles can promote competition and foster innovation, applying them in certain areas can actually stifle progress. Nelson argues that

aggressive patenting has hindered scientific research by restricting access to tools and processes that could be used to generate new findings. He suggests that some kind of exception to patent law should be made for scientists who seek to build off of patented findings and then put their research results into the public domain. In other spheres, market organization is altogether unsuitable. Legal expert Richard Briffault looks at one such example—the democratic political process—and profiles the successes and failures of campaign finance reform in preventing parties from buying political influence. This important volume shows that market organization has its virtues, but also its drawbacks. Just as regulation can be over-applied, so too can market principles. **The Limits of Market Organization** encourages readers to think more discriminately about the march toward privatization, and to remember the importance of public institutions.
