Making Eye Health a Population Health Imperative National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Public Health Approaches to Reduce Vision Impairment and Promote Eye Health, 2017-01-15 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. *Making Eye Health a Population Health Imperative: Vision for Tomorrow* proposes a new population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

Selected Health Conditions and Likelihood of Improvement with Treatment National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Identifying Disabling Medical Conditions Likely to Improve with Treatment, 2020-07-12 The Social Security Administration (SSA) administers two programs that provide disability benefits: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. SSDI provides disability benefits to people (under the full retirement age) who are no longer able to work because of a disabling medical condition. SSI provides income assistance for disabled, blind, and aged people who have limited income and resources regardless of their prior participation in the labor force. Both programs share a common disability determination process administered by SSA and state agencies as well as a common definition of disability for adults: the inability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. Disabled workers might receive either SSDI benefits or SSI payments, or both, depending on their recent work history and current income and assets. Disabled workers might also receive benefits from other public programs such as workers' compensation, which insures against work-related illness or injuries occurring on the job, but those other programs have their own definitions and eligibility criteria. *Selected Health Conditions and Likelihood of Improvement with Treatment* identifies and defines the professionally accepted, standard measurements of outcomes improvement for medical conditions. This report also identifies specific, long-lasting medical conditions for adults in the categories of mental health disorders, cancers, and musculoskeletal disorders. Specifically, these conditions are disabling for a length of time, but typically don't result in permanently disabling limitations; are responsive to treatment; and after a specific length of time of treatment, improve to the point at which the conditions are no longer disabling.

Science, Politics, Stem Cells And Genes: California's War On Chronic Disease Don C Reed, 2023-02-13 Is there a way to fight back against 'incurable' disease? California thought so — and put its money where its mind was — three billion dollars' worth! And when that was gone, how about five and a half billion dollars more — to build and expand the California Institute for Regenerative Medicine? For some, science excites; it is the great adventure, to challenge the impossible: like a real-life battle with a giant squid, or the proposed disassembly of the Eiffel Tower, or ejecting from a jet in the sky, from a height greater than Mount Everest. For others, regenerative medicine is a mystery — could the urge to do murder have a genetic cause — which might be reduced? And for everyone, there is the fight to protect our loved ones' lives — 133 million of us, suffering from chronic disease — from America alone, a colossal cost of \$3 trillion dollars last year. An epic battle, 'Science, Politics, Stem Cells and Genes: CALIFORNIA'S WAR ON CHRONIC DISEASE' takes the reader behind the scenes. An award-winning teacher, Reed shares science in stories — including the systematic assault on Alzheimer's disease, cancer, autism, epilepsy, liver failure, schizophrenia, obesity, stroke, sickle cell, arthritis, blindness, paralysis, kidney failure, ALS, aging, and much, much more. Readers can expect a greater understanding of the intricate adventure of stem cell research, as well as the political wrestling it took to make progress possible — that California's effort may benefit the world. From early research to clinical trials, America should take pride in the accomplishments of the California Institute for Regenerative Medicine. Read on.

Urban Soils Rattan Lal, B. A. Stewart, 2017-10-18 Globally, 30% of the world population lived in urban areas in 1950, 54% in 2016 and 66% projected by 2050. The most urbanized regions include North America, Latin America, and Europe. Urban encroachment depletes soil carbon and the aboveground biomass carbon pools, enhancing the flux of carbon from soil and vegetation into the atmosphere. Thus, urbanization has exacerbated ecological and environmental problems. Urban soils are composed of geological material that has been drastically disturbed by anthropogenic activities and compromised their role in the production of food, aesthetics of residential areas, and pollutant dynamics. Properties of urban soils are normally not favorable to plant growth—the soils are contaminated by heavy metals and are compacted and sealed. Therefore, the quality of urban soils must be restored to make use of this valuable resource for delivery of essential ecosystem services (e.g., food, water and air quality, carbon sequestration, temperature moderation, biodiversity). Part of the Advances in Soil Sciences Series, Urban Soils explains properties of urban soils; assesses the effects of urbanization on the cycling of carbon, nitrogen, and water and the impacts of management of urban soils, soil restoration, urban agriculture, and food security; evaluates ecosystem services provisioned by urban soils, and describes synthetic and artificial soils.

The Brain, the Nervous System, and Their Diseases [3 volumes] Jennifer L. Hellier, 2014-12-16 This comprehensive encyclopedia provides a thorough overview of the human brain and nervous system—the body's CPU and data network. It covers basic anatomy and function, diseases and disorders, treatment options, wellness concepts, and key individuals in the fields of neurology and neuroscience. Written to be accessible to high school and college students and general readers, this three-volume encyclopedia provides a sweeping overview of the brain, nervous system, and their diseases. Bringing together contributions from leading neuroscientists, neurologists, family physicians, psychologists, and public health professionals, the work covers both brain anatomy and function and neurological disorders, addressing how underlying processes—whether biological, developmental, environmental, or neurodegenerative—manifest themselves. Roughly a third of the entries are about neuroscience and how neurons talk to each other in brain circuits to provide normal function. Another group of entries discusses abnormalities or dysfunctions of the brain that develop into disorders or diseases, while a third group focuses on research and experimental procedures commonly used to study the nervous system. The encyclopedia also explores its subject from a wellness perspective, explaining actions that can prevent neurological disorders and injuries and promote general nervous system health. By addressing both ends of the spectrum, the work presents a holistic perspective that will appeal to a broad range of readers.

Challenges to Teacher Education in Difficult Economic Times Joan Stephenson, Lorraine Ling, 2013-10-23 Teacher education in a financial crisis – what are the consequences and how can probity be maintained? Education, like most other parts of everyday life, is experiencing the challenges brought about by global financial constrictions. This book presents the experiences and views of practising teacher educators from multiple countries and continents on how the melt-down in world economics has affected and will continue to affect teacher education and concomitant experiences in schooling. The ramifications are seen to extend into every aspect of teacher preparation, continuing staff development and teacher support, and there are significant implications for the quality of teaching and learning, and the ethos and standing of the process of education as a whole. Drawing on educational theory and social, political, and economic discourses, the book addresses issues such as policy, philosophy, organisation, funding, resources, modes of teaching and learning, curricular change, recruitment and retention, amongst others, and provides a snap-shot across diverse contexts. It aims to provide an evaluative, analytical but reflective picture of teacher education in the light of the world economic crisis, whilst exploring good practice and suggesting future strategies to develop the quality of teacher education and professional support, teaching and learning. The volume provides an insight into the need for a new paradigm for teacher education: one that involves teacher educators in devising a discourse of positive and radical change. It will be a valuable resource for teacher educators, educational leaders, policy makers, educational commentators and teachers seeking to engage with the scholarship of teaching as a means to engage in continuous professional development.

Chinese Foreign Relations with Weak Peripheral States Jeffrey Reeves, 2015-10-08 This book examines China’s relations with its weak peripheral states through the theoretical lens of structural power and structural violence. China’s foreign policy concepts toward its weak neighbouring states, such as the ‘One Belt, One Road’ strategy, are premised on the assumption that economic exchange and a commitment to common development are the most effective means of ensuring stability on its borders. This book, however, argues that China’s overreliance on economic exchange as the basis for its bilateral relations contains inherently self-defeating qualities that have contributed and can further contribute to instability and insecurity within China’s periphery. Unequal economic exchange between China and its weak neighbours results in Chinese influence over the state’s domestic institutions, what this book refers to as ‘structural power’. Chinese structural power, in turn, can undermine the state’s development, contribute to social unrest, and exacerbate existing state/society tensions—what this book refers to as ‘structural violence’. For China, such outcomes lead to instability within its peripheral environment and raise its vulnerability to security threats stemming from nationalism, separatism, terrorism, transnational organised crime, and drug trafficking, among others. This book explores the causality between China’s economically-reliant foreign policy and insecurity in its weak peripheral states and considers the implications for China’s security environment and foreign policy. This book will be of much interest to students of Chinese politics, Asian security studies, international political economy and IR in general.
