East Asian Economic Regionalism Edward J. Lincoln, 2004-03-16 Something new is happening across East Asia. A region notable for its lack of internal economic links is discussing regional cooperation on trade, investment, and exchange rates. Because of negotiations elsewhere around the globe on regional trade—such as those that led to the consolidation of the European Union, the formation of the North American Free Trade Area, and the rapid proliferation of bilateral free trade areas—the talk is not surprising. Nevertheless, East Asia's past inertia with regard to forming a regional partnership raises many questions about its emerging regionalism. Why has the region suddenly shifted from taking a global approach to economic issues to discussing a regional bloc? How fast and how far will the new regionalism progress? Will the region become a version of the European Union, or something far less? What is the probable impact on American economic and strategic interests—are the likely developments something that the U.S. government should encourage or discourage? Edward Lincoln takes up these questions, exploring what is happening to regional trade and investment flows and what sort of regional arrangements are the most sensible. Lincoln argues that an exclusive grouping is unlikely. Free trade negotiations have brought some economies in the region together, but they also have led to links with nations outside the region. Some regional governments most notably Japan, continue to have difficulty embracing the concept of free trade, even with favored regional partners. In the wake of the Asian financial crisis, governments also have looked at cooperating on exchange rates, but they have done little to move forward. The U.S. government must decide how to respond to these developments in East Asia. An exclusively Asian form of regionalism could run counter to American economic interests, and the U.S. government has reacted negatively to some of these proposals in the past. Because trade and investment links between the countries of the Asia Pacific region and the United States remain very strong, Lincoln argues that the Asia Pacific Economic Cooperation forum remains the appropriate institution for pursuing regional trade and investment issues.

Bird Strike in Aviation Ahmed F. El-Sayed, 2019-05-29 Groundbreaking Handbook Offers Detailed Research and Valuable Methodology to Address Dangerous and Costly Aviation Hazard Though annual damages from bird and bat collisions with aircraft have been estimated at \$400 million in the United States and up to \$1.2 billion in commercial aviation worldwide and despite numerous conferences and councils dedicated to the issue, very little has been published on this expensive and sometimes-lethal flying risk. Bird Strike in Aviation seeks to fill this gap, providing a comprehensive guide to preventing and minimizing damage caused by bird strike on aircraft. Based on a thorough and comprehensive examination of the subject, Dr. El-Sayed offers different approaches to reducing bird strikes, including detailed coverage of the three categories necessary for such reduction, namely, awareness/education, bird management (active and passive control), and aircraft design. In addition, the text discusses the importance of cooperation between airplanes, airports and air traffic authorities as well as testing methods necessary for certification of both aircraft frame and engine. Other notable features include: Statistics and analyses for bird strikes with both civil and military helicopters as well as military fixed wing aircrafts, including annual costs, critical flight altitudes, critical parts of aircraft, distance from air base and specifics of date and timing Thorough review and analysis all fatal bird strike accidents and most non-fatal accidents since 1905, the first book to provide such a reference The use of numerical methods in analyzing historic data (ex. probability functions, finite element methods for analyzing impact on aircraft structure, experimental measurement technique for displacement, vibration, component distortion, etc.) Instruction on identification of bird species (using visual, microscopic, and DNA evidence) and details of bird migration to aid air traffic control in avoiding scenarios likely to result in collision With its wealth of statistical data, innovative research, and practical suggestions, Bird Strike in Aviation will prove a vital resource for researchers, engineers and graduate students in aerospace engineering/manufacturing or ornithology, as well as for military and civilian pilots and flight crew or professionals in aviation authorities and air traffic control.

Foreign Object Debris and Damage in Aviation Ahmed F. El-Sayed, 2022-04-27 Foreign Object Debris and Damage in Aviation discusses both biological and non-biological Foreign Object Debris (FOD) and associated Foreign Object Damage (FOD) in aviation. The book provides a comprehensive treatment of the wide spectrum of FOD with numerous

cost, management, and wildlife considerations. Management control for the debris begins at the aircraft design phase, and the book includes numerical analyses for estimating damage caused by strikes. The book explores aircraft operation in adverse weather conditions and inanimate FOD management programs for airports, airlines, airframe, and engine manufacturers. It focuses on the sources of FOD, the categories of damage caused by FOD, and both the direct and indirect costs caused by FOD. In addition, the book provides management plans for wildlife, including positive and passive methods. The book will interest aviation industry personnel, aircraft transport and ground operators, aircraft pilots, and aerospace or aviation engineers. Readers will learn to manage FOD to guarantee air traffic safety with minimum costs to airlines and airports.

The Patent-Competition Interface in Developing Countries Thomas K. Cheng, 2022-01-15 This book proposes an approach to the patent-competition interface for developing countries. It puts forward a theoretical framework after canvassing relevant policy considerations and examines the many reasons why patent protection is not essential for generating innovation incentives in developing countries. These include the tendency of the patent system to overcompensate innovators, the availability of other appropriation mechanisms for innovators to monetize their innovations, and the lack of appropriate technological capacity in many developing countries to take advantage of the incentives generated by the patent system. It also argues that developing countries with a small population need not pay heed to the impact of their patent system on the incentives of foreign innovators. It then proposes a classification of developing countries into production countries, technology adaptation countries, and proto-innovation countries and argues that dynamic efficiency considerations take on different meanings for developing countries depending on their technological capacities. For the vast majority of developing countries bereft of meaningful innovation capacity, foreign technology transfer is the main vehicle for technological progress. The chief dynamic policy consideration for these countries is hence incentives for technology transfer instead of innovation incentives. There are three main means of voluntary technology transfer: importation of technological goods, foreign direct investment, and technology licensing. Competition law regulation of patent exploitation practices interacts with these three means of technology transfer in different ways and an appropriate approach to the patent-competition interface for these countries needs to take these into account. Distilling all these considerations, the book proposes a development stage-specific approach to the patent-competition interface for developing countries. The approach is then applied to a number of patent exploitation practices, including unilateral refusal to deal, patent tying, excessive pricing for pharmaceuticals, reverse payment settlements, and restrictive licensing practices.

Fundamentals of United States Intellectual Property Law Amanda Reid, Sean Tu, Jessica Kiser, 2021-11-05 Completely revised and updated, this seventh edition of a well-received desk reference offers in one volume a comprehensive review of United States (US) copyright, patent, and trademark laws. Like its previous editions, the book's thorough and sophisticated treatment of this complex material escapes the cumbersome overelaboration of a multivolume treatise on the one hand and a superficial "nutshell" on the other hand. Maintaining the systematic structure that makes it easy for users to zero in on any particular matter, the new edition incorporates the changes that have entered into force since the sixth edition and expertly examines their effects. The three major categories of copyright, patent, and trademark are covered in turn—along with a fourth part on chip protection—with detailed but concise examination and analysis of such issues and topics as the following and much more: subject matter of protection; conditions of protection; registration procedures; scope of exclusive rights; transfer of interests; fair use; rights in unregistered marks; protection of computer software, code, and databases; remedies and defenses; and procedural issues in infringement actions. The authors examine significant case law, updated for this edition, in the course of their analysis. With its detailed citations and readily accessible and complete subject coverage, this latest edition is sure to retain its usefulness as a quick reference or desk book for intellectual property practitioners, in-house counsel, patent agents, academics, and librarians, as well as for anyone interested in understanding US intellectual property law.

Revolution, Representation, and Authoritarianism Sarah Wessel,2021-11-29 This book examines Egypt’s turbulent and contradictory political period (2011-2015) as key to understanding contemporary politics in the country and the developments in the Arab region after the mass protests in 2010/11, more broadly. In doing so, it breaks new ground in the study of political representation, providing analytical innovation to the study of disenchantment with politics, democracy fatigue and social cohesion. Based on five years of intense fieldwork, the author provides rare insights into local and national ideas on politics, justice and identity, and on how people situate themselves and Egypt in the regional and global context. It analyzes how the creation of an alternate, political system was discussed and negotiated among the Egyptian population, the military, the government, public figures, the media, and international actors, and yet nevertheless today, Egypt has a new political regime that is the most repressive in the countries’ modern history. Finally, it recalls the emotions and perceptions of individuals and collectives and interlinks these local perspectives to national events and developments through time. This book will be of key interest to scholars and students of democratization and authoritarianism, Middle East Studies, political representation and informality, collective action, and more broadly to cultural studies and international relations.
