Regulating Cartels in India Sudhanshu Kumar, 2022-11-23 This book presents a comprehensive assessment of anti-cartel enforcement and investigative procedures in India. It makes a case for enhanced sanctions for cartel conduct in India. Cartels are considered the most pernicious violation of competition law, referred to as cancer to the free market economy. While competition laws in most jurisdictions prescribe strict sanctions against cartels, Indian Competition Law provides only civil penalties, with an upper ceiling for proven cartel conduct. This volume assesses the effectiveness of anti-cartel enforcement of the Competition Commission of India (CCI). It explores investigative procedures of the CCI through multiple qualitative and quantitative indicators and the extent to which enforcement of anti-cartel laws in India has led to cartel deterrence. Further, it also examines the priorities and processes of the CCI in terms of anti-cartel enforcement, their sanctioning mechanism and their dependency of computation of penalty on varied factors. Featuring detailed case law studies and engaging data, this book will be an essential read for students and researchers of law and legal studies, competition law, corporate law, intellectual property law, and business law.

Mobilities, Knowledge, and Social Justice Suzan Ilcan, 2013-07-01 The mobility of people, objects, information, ideas, services, and capital has reached levels unprecedented in human history. Such forms of mobility are manifested in continued advances in communication and transportation capacities, in the growing use of digital and biometric technologies, in the movements of Indigenous, migrant, and women's groups, and in the expansion of global capitalism into remote parts of the world. *Mobilities, Knowledge, and Social Justice* demonstrates how knowledge is mobilized and how people shape, and are shaped by, matters of mobility. Richly detailed and illuminating essays reveal the ways in which issues of mobility are at the centre of debates, ranging from practices of belonging to war and border security measures, from gender, race, and class matters to governance and international trade, and from citizenship and immigration policies to human rights. Contributors analyze how particular forms of mobility generate specific types of knowledge and give rise to claims for social justice. This collection reconsiders mobility as a key term in the social sciences and humanities by delineating new ways of understanding how mobility informs and shapes lives as well as social, cultural, and political relations within, across, and beyond states. Contributors include Rob Aitken (Alberta), Tanya Basok (Windsor), Janine Brodie (Alberta), William Coleman (Waterloo), Ronjon Paul Datta (Alberta), Karl Froschauer (Simon Fraser), Daniel Gorman (Waterloo), Amanda Grzyb (Western), Suzan Ilcan (Waterloo), Eleonore Kofman (Middlesex), Anita Lacey (Auckland), Theresa McCarthy (Buffalo), Daniel J. Paré (Ottawa), Nicola Piper (Sydney), Parvati Raghuram (Open), Kim Rygiel (Wilfrid Laurier), Leslie Regan Shade (Toronto), Sandra Smeltzer (Western), Daiva Stasiulis (Carleton), Myra Tawfik (Windsor), and Lloyd Wong (Calgary).

International Standards for Food Safety Naomi Rees, David Watson, 2000-04-30 This is one of the first books to draw together information and views about international control of food safety from around the world. Demands for safe food, against a background of increasing trade, are making international controls on food safety essential. Agreements on how to control the safety of food to meet these needs are now in place among the major trading blocks, particularly in Europe and in the USA, and more recently, in Australia. This book also describes progress in areas such as systematically reviewing risk from food; developing national infrastructures to enforce standards; and growing input from consumer groups and others, including economists, to the debate on how to set international food standards. Discussed in depth is the effort to achieve global standards for food safety under the auspices of the Codex Alimentarius Commission. There are chapters from world-leading experts on Codex, international control of radiological contamination, pesticides and veterinary drugs, and other chemical contaminants.

Surveillance and Control in Israel/Palestine Elia Zureik, David Lyon, Yasmeen Abu-Laban, 2010-12-13 Surveillance is always a means to an end, whether that end is influence, management or entitlement. This book examines the several layers of surveillance that control the Palestinian population in Israel and the Occupied Territories, showing how they operate, how well they work, how they are augmented, and how in the end their chief purpose is population control. Showing how what might be regarded as exceptional elsewhere is here regarded as the norm, the book looks not only at the political economy of surveillance and its technological and military dimensions, but also at the ordinary ways that Palestinians in Israel and the occupied territories are affected in their everyday lives. Written in a clear and accessible style by experts in the field, this book will have large appeal for academic faculty as well as graduate and senior undergraduate students in sociology, political science, international relations, surveillance studies and Middle East studies.

The SAGE Handbook of Environmental Change John A Matthews, 2012-01-31 The SAGE Handbook of Environmental Change is an extensive survey of the interdisciplinary science of environmental change, including recent debates on climate change and the full range of other natural and anthropogenic changes affecting the Earth-ocean-atmosphere system in the past, present and future. It examines the historic importance, present

status and future prospects of the field over two volumes. With more than 40 chapters, the books situate the defining characteristics and key paradigms within a state-of-the-art review of the field, including its changing nature and diversity of approaches, evidence base, key theoretical arguments, resonances with other disciplines and relationships between theory, research and practice. Opening with a detailed, contextualizing essay by the editors, the work is arranged into six parts: Part One: Approaches to Understanding Environmental Change Part Two: Evidence of Environmental Change and the Geo-ecological Response Part Three: Causes, Mechanisms and Dynamics of Environmental Change Part Four: Key Issues of Human-induced Environmental Changes and Their Impacts Part Five: Patterns, Processes and Impacts of Environmental Change at the Regional Scale Part Six: Responses of People to Environmental Change and Implications for Society Global in its coverage, scientific and theoretical in its approach, the books bring together an international set of respected editors and contributors to provide an exciting, timely addition to the literature on climate change. With the subjects' interdisciplinary framework, this book will appeal to academics, researchers, postgraduates and practitioners in a variety of disciplines including, geography, geology, ecology, environmental science, archaeology, anthropology, politics and sociology.

Think Bayes Allen B. Downey,2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

Advances in Manufacturing and Processing of Materials and Structures Yoseph Bar-Cohen,2018-09-03 Advances in Manufacturing and Processing of Materials and Structures cover the latest advances in materials and structures in manufacturing and processing including additive and subtractive processes. It's intended to provide a compiled resource that reviews details of the advances that have been made in recent years in manufacturing and processing of materials and structures. A key development incorporated within this book is 3D printing, which is being used to produce complex parts including composites with odd shape fibers, as well as tissue and body organs. This book has been tailored for engineers, scientists and practitioners in different fields such as aerospace, mechanical engineering, materials science and biomedicine. Biomimetic principles have also been integrated. Features Provides the latest state-of-the art on different manufacturing processes, including a biomimetics viewpoint Offers broad coverage of advances in materials and manufacturing Written by chapter authors who are world-class researchers in their respective fields Provides in-depth presentation of the latest 3D and 4D technologies related to various manufacturing disciplines Provides substantial references in each chapter to enhance further study

Writing Reaction Mechanisms in Organic Chemistry Audrey Miller,Philippa H. Solomon,2012-12-02 Presentation is clear and instructive: students will learn to recognize that many of the reactions in organic chemistry are closely related and not independent facts needing unrelated memorization. The book emphasizes that derivation of a mechanism is not a theoretical procedure, but a means of applying knowledge of other similar reactions and reaction conditions to the new reaction. n Brief summaries of required basic knowledge of organic structure, bonding, stereochemistry, resonance, tautomerism, and molecular orbital theory n Definitions of essential terms n Typing and classification of reactions n Hints (rules) for deriving the most likely mechanism for any reaction
