Pathology of Rheumatic Diseases H.G. Fassbender,2013-03-09 Pathology is no longer the dead science it was reputed to be a few decades ago. The famous Canadian pathologist, William Boyd, expressed the newer attitude aptly when he stated that pathology should no longer be concerned simply with describing the WHAT of disease, but must be increasingly concerned with the HOW and the WHY. By this he implied that the preoccupation of the usual student of disease in the architecture of diseased tissues and descriptions of participating cells, their staining characteristics, etc. , must give way to study and understanding of the dynamics of each disease process, the pathogenetic mechanisms producing the changes in body tissues. This study is not limited simply to etiologic factors and portals of entry to the site of the lesion, but includes the physical and chemical factors involved, the variations of host response conditioned by immunologic reactions of differing intensities, enzymatic excesses or deficiencies, and a host of other variables of little known character such as the prostaglandins which definitely affect the disease process. No longer is the pathologist one who looks at sections of diseased tissue merely for differentiation of disease, but truly a pathologist studies disease.

Medical Latin in the Roman Empire D. R. Langslow,2000-06-08 Despite the ubiquitous importance of medicine in Roman literature, philosophy, and social history, the language of Latin medical texts has not been properly studied. This book presents the first systematic account of a part of this large, rich field. Concentrating on texts of 'high' medicine written in educated, even literary, Latin Professor Langslow offers a detailed linguistic profile of the medical terminology of Celsus and Scribonius Largus (first century AD) and Theodorus Priscianus and Cassius Felix (fifth century AD), with frequent comparisons with their respective near-contemporaries. The linguistic focus is on vocabulary and word-formation and the book thus addresses the large question of the possible and the preferred means of extending the vocabulary in Latin at the beginning and end of the Empire. Some syntactic issues (including word order and nominalization) are also discussed, and sections on the sociolinguistic background and stylistic features consider the question to what extent we may speak of 'medical Latin' in the strong sense, as the language of a group, and draw comparisons and contrasts between ancient and modern technical languages.

Glial Interfaces in the Nervous System Håkan Aldskogius,John Fraher,2002 Glial cells are commonly viewed as subordinate players to the functional requirements of neighbouring neurons - in normal as well as pathological conditions. These neuron-glial interactions are crucial for the development, maintenance, plasticity and repair of the nervous system. They are also dependent upon and/or influenced by interactions between glial cells themselves.

Pediatric Swallowing and Feeding Joan C. Arvedson,Linda Brodsky,Maureen A. Lefton-Greif,2019-07-26 Pediatric Swallowing and Feeding: Assessment and Management, Third Edition provides information to practitioners interested in and involved with children who demonstrate swallowing and feeding disorders. Since the 2002 publication of the second edition, there has been an exponential increase in the number of medically fragile and complex children with swallowing/feeding disorders. A corresponding proliferation in the related basic and clinical research has resulted in the increased appreciation of the complicated inter-relationships between structures and systems that contribute to swallowing/feeding development, function, and disorders. Case studies throughout the book provide examples for decision making and highlight salient points. New to the Third Edition: * Maureen A. Lefton-Greif, PhD, CCC-SLP, BCS-S, is welcomed as co-editor. She brings extensive research expertise and clinical practice in pediatric dysphagia and feeding. * All chapters contain significant updated evidence-based research and clinical information. * New chapters focus on the genetic testing and conditions associated with swallowing and feeding disorders, and the pulmonary manifestations and management of aspiration. * World Health Organization (WHO) description of an International Classification of Functioning, Disability, and Health (ICF) sets the stage for an in-depth discussion of clinical feeding evaluation procedures, interpretation, and management decision making. Pediatric Swallowing and Feeding continues to be the leading text on pediatric dysphagia that provides practical information for clinicians seeing children with swallowing and feeding disorders. The overall importance of an appropriate fund of knowledge and shared experience employing team approaches is emphasized throughout this third edition as in the earlier editions of this book. From the Foreword: The Editors have recognized the advances and changes in the understanding in the information now available for the care of pediatric swallowing and feeding challenges. They have recruited an outstanding group of contributors for this newest edition. There are numerous critically important updates and additions in the third edition. They have included World Health Organizations International Classification of Functioning, Disability and Health is the functional basis in all areas of the book.
