**Henri Renaud**

*Eau chaude & chauffage au gaz* Henri Renaud, 2010-07 Enrichie de plans et de schémas, cette collection traite des techniques de construction des maisons individuelles. Chaque thème est développé à partir d'un projet complet de pavillon comprenant la vue en perspective des façades, les vues en plan et un descriptif des travaux. Ainsi, vous suivrez ou entreprendrez avec facilité des travaux de construction de charpente, de couverture, de plancher, de menuiserie, de ventilation, de chauffage, d'escalier etc...

*Dictionnaire bilingue du chauffage* Marc Muylaert, 1994-01-01

*Pratique du chauffage* Jack Bossard, Jean Hrabovsky, 2020-03-09 Cet ouvrage présente les différents aspects technologiques et fonctionnels des équipements d'une installation de chauffage. Il permet d'acquérir et de mettre en pratique les connaissances indispensables à travers 6 dossiers :

- Fonction et classification des installations de chauffage : réglementation et normes.
- Dimensionnement des installations de chauffage et d'eau chaude sanitaire : calcul des déperditions, de la consommation, de la puissance nécessaire.
- Production de chaleur : électricité, combustibles, eau, biomasse, réseau urbain, pompe à chaleur, eau chaude sanitaire.
- Émission de la chaleur : radiateur de production, chauffage central, chauffage par le sol, systèmes rayonnants.
- Distribution de la chaleur : chauffage à eau chaude, aéraulique, organes de sécurité, régulation.
- Aération, ventilation et climatisation.

Découpé en 26 fiches-outils et traité de façon synthétique et pratique, il s'adresse aux professionnels du bâtiment (installateurs, entrepreneurs), et aux étudiants en génie énergétique.

Production D'Eau Chaude Sanitaire Individuelle Programme Rage, 2017-02-14 Ce rapport d'étude présente les résultats des essais réalisés sur une chaudière murale gaz à condensation et une pompe à chaleur double-service afin de déterminer leurs performances pour la production d'eau chaude sanitaire (ECS). Dans les logements basse consommation, l'ECS devient souvent un poste énergétique prédominant par rapport au chauffage. Or les performances énergétiques des appareils de production d'ECS sont méconnues. C'est le cas notamment pour les chaudières à condensation et les PAC double-service. Diverses questions se posent quant aux performances énergétiques de ces appareils: Les rendements ou les COP pour la production d'ECS peuvent-ils être déduits des valeurs nominales indiquées en mode chauffage seul ? Assurer le chauffage et l'ECS avec un même générateur conduit-il à une dégradation des performances en chauffage ? Les besoins d'ECS par nature très variables impliquent-ils des variations importantes du rendement ou du COP en ECS ? Le réglage de la température de consigne d'ECS et d'autres paramètres, tels que le différentiel pour la production d'ECS, influent-ils de manière importante sur les performances ? L'approche adoptée dans cette étude pour apporter des éléments de réponses à ces questions a consisté à mener des essais. Une étude de cas a été également effectuée.

**International Dictionary of Heating, Ventilating and Air Conditioning** REHVA, 2006-04-07 The Dictionary is divided into two sections. The main sequence of the book consists of some 4,000 terms given in English, in alphabetical order, with their translations. The remainder of the book consists of alphabetical indexes for the other eleven languages covered: French, German, Italian, Danish, Finnish, Dutch, Spanish, Swedish, Hungarian, Polish and Russian. Each alphabetical index is keyed to serial numbers which refer the user to the correct item in the main sequence.

The Gas Situation in the ECE Region Around the Year 1990 Yong Zhou, 2014-05-19 The Gas Situation in the ECE Region Around the Year 1990 contains the proceedings of an international symposium of the Committee on Gas of the Economic Commission for Europe, held in Evian, France, at the invitation of the Government of France, on October 2-5, 1978. The symposium provided a forum for evaluating the future of gas in the energy requirements of Europe and North America — the region encompassed by the Economic Commission for Europe (ECE), with emphasis on natural

gas markets, consumption, and imports and exports. Comprised of 34 chapters, this book begins with an overview of the production of natural gas and other gases that exist within the ECE region or can be imported, followed by a discussion on possible sources of natural gas for France and the ECE area in 1990. Subsequent chapters focus on energy from liquefied natural gas; chances for alternative fuels in the gas industry; gas supplies in the United States; and high depth underground coal gasification as a potential energy source for the future. The economic aspects of gas gathering in the North Sea and gas consumption in Czechoslovakia up to 1990 are also examined, along with the use of natural gas for the production of olefins in Western Europe. This monograph will be of interest to economists and energy policymakers.
