**Smooth Ergodic Theory for Endomorphisms** Min Qian,Jian-Sheng Xie,Shu Zhu,2009-07-07 Ideal for researchers and graduate students, this volume sets out a general smooth ergodic theory for deterministic dynamical systems generated by non-invertible endomorphisms. Its focus is on the relations between entropy, Lyapunov exponents and dimensions.

A First Course in Structural Equation Modeling Tenko Raykov,George A. Marcoulides,2012-08-21 In this book, authors Tenko Raykov and George A. Marcoulides introduce students to the basics of structural equation modeling (SEM) through a conceptual, nonmathematical approach. For ease of understanding, the few mathematical formulas presented are used in a conceptual or illustrative nature, rather than a computational one. Featuring examples from EQS, LISREL, and Mplus, A First Course in Structural Equation Modeling is an excellent beginner's guide to learning how to set up input files to fit the most commonly used types of structural equation models with these programs. The basic ideas and methods for conducting SEM are independent of any particular software. Highlights of the Second Edition include: • Review of latent change (growth) analysis models at an introductory level • Coverage of the popular Mplus program • Updated examples of LISREL and EQS • Downloadable resources that contains all of the text's LISREL, EQS, and Mplus examples. A First Course in Structural Equation Modeling is intended as an introductory book for students and researchers in psychology, education, business, medicine, and other applied social, behavioral, and health sciences with limited or no previous exposure to SEM. A prerequisite of basic statistics through regression analysis is recommended. The book frequently draws parallels between SEM and regression, making this prior knowledge helpful.

**Fast Simulation of Computer Architectures** Thomas M. Conte,Charles E. Gimarc,2012-12-06 Chapters in Fast Simulation of Computer Architectures cover topics such as how to collect traces, emulate instruction sets, simulate microprocessors using execution-driven techniques, evaluate memory hierarchies, apply statistical sampling to simulation, and how to augment simulation with performance bound models. The chapters have been written by many of the leading researchers in the area, in a collaboration that ensures that the material is both coherent and cohesive. Audience: Of tremendous interest to practising computer architect designers seeking timely solutions to tough evaluation problems, and to advanced upper division undergraduate and graduate students of the field. Useful study aids are provided by the problems at the end of Chapters 2 through 8.

**SuperVan & I** Sarel Van der Merwe, 2012-04-01 THE CARS, THE RACES, THE RIVALRIES, THE WOMEN ... WELCOME TO THE WORLD OF SAREL VAN DER MERWE, SOUTH AFRICA'S GREATEST RACING DRIVER. IT'S TIME TO FASTEN YOUR SEATBELT FOR THE RIDE OF YOUR LIFE ... Sarel van der Merwe is a certified, card-carrying

legend – the Clint Eastwood of South African motor sport. Not only is Sarel the most gifted driver ever to come out of this country, winning both off-road and on the track, but he's been utterly uncompromising in his approach. Since he and his alter ego, SuperVan, have been racing, Sarel has been super-competitive, scratching paint off racing cars from Kyalami to Le Mans. And he's certainly pissed some people off. In this no-holds-barred story of his life, Sarel reveals the skinny behind all his big rivalries, his run-ins with team owners and his frequent disagreements with motor-sport authorities. Along with a behind-the-scenes look at the world's legendary motor races, he rates the greatest – and worst – cars he ever drove, remembers some of the colourful characters that featured in his long career, and explains exactly why motor sport in South Africa is no longer what it used to be. And then, of course, there were the women?... 'Sex is like motor sport,' Sarel says. Though you'll have to read the book to find out why.

*Sendmail 8.13 Companion* Bryan Costales, Gregory Neil Shapiro, Claus Assmann,2004 If you had a list of the words used to describe sendmail, they'd probably include reliable, flexible, configurable, complex, monolithic, and daunting. But you're not likely to find the word easy. Even seasoned sendmail pros are sometimes frustrated by the intricacies of sendmail's configuration files. With a little determination and the help of a good reference book, like sendmail, Third Edition, you can master this demanding program. But when there's a significant point release, like sendmail V8.13, where do you turn? An excellent companion to our popular sendmail, Third Edition, the sendmail 8.13 Companion provides a timely way to document the improvements in V8.13 in parallel with its release. The book highlights the important changes in the latest update to sendmail, pointing out not just what is handy or nice to have, but what's critical in getting the best behavior from sendmail. This is especially important now that spam is on the rise, and because mobile technology requires roving laptops to use encrypted connections. Not surprisingly, many of the changes and additions to V8.13 have been driven by the ongoing fight against spam. Anyone concerned about spam--and who isn't?--will benefit greatly by upgrading to V8.13 sendmail. Among its many enhancements, V8.13 includes new routines that support the SPF sending site authentication standard (in the Milter library), simultaneous connection control, high connection rate control, and finer tuning of SASL parameters. The additions to the Milter library, alone, make upgrading worthwhile, but sendmail's connection control makes it a no-brainer. The key to understanding them is the sendmail 8.13 Companion. The book is divided into twenty-five chapters that parallel the chapters in the third edition of the sendmail book. For instance, if you're interested in Options configuration (Chapter 24 in sendmail), you'll turn to Chapter 24 in your companion volume to find out what's new in V8.13. For a simple dot release (8.12 to 8.13), V8.13 sendmail has added more features, options, and fundamental changes than any other single dot release has included. If you need to set up or manage sendmail, you'll want this companion volume close at hand. Even if you aren't ready to

upgrade to V8.13, you'll find the key to understanding them is the sendmail 8.13 Companion a useful guide to understanding and staying current with the latest changes in sendmail.

*The Rootes Story Vol. II - The Chrysler Years* Geoff Carverhill, 2023-10-24  
The Rootes Story – The Chrysler Years focuses on the Rootes Group during the 1960s and 70s, the vehicles produced by the company, the people that created them and the events that led to Rootes selling out to Chrysler Corporation of America and eventual acquisition by the French Peugeot company. A valuable backdrop to the events is provided throughout the book by ex- Rootes employees and management. Chronicles the Rootes Group's efforts to survive as a major car and truck manufacturer in Britain's turbulent 1960s and 1970s. From a position as a respected global name in manufacturing, the Rootes Group found itself struggling to compete in a new buyers' market, in which foreign competition was starting to overtake British manufacturers. Despite the challenges that confronted them, Rootes designed and built some of the most popular cars of the period: the Hillman Minx and Super Minx, the Singer Vogue and the Humber Sceptre, and the iconic but ill-fated Hillman Imp, as well as some of the most rugged and well-purposed vans and trucks, built by Commer, Karrier and Dodge. The book highlights the competition pedigree of the Sunbeam Rapier, the Alpine, the Imp and the Ford V8-engined Tiger. Famous names such as Paddy Hopkirk, Rosemary Smith and Peter Procter all give their stories as works drivers for Rootes, while engineers at 'comps' tell the background stories of how races and rallies were won and lost. Andrew Cowan, Rootes' works rally driver and winner of the 1968 London–Sydney Marathon in a Hillman Hunter, shares his story in what was a remarkable and unexpected victory for Rootes. This complex story is told through the eyes of ex-Rootes and Chrysler personnel, giving 'from the horse's mouth' accounts of the company and its exploits. Geoff Carverhill takes you inside the boardroom, into the drawing office and on to the production line to give the reader an insider's view of Rootes, Chrysler and Peugeot.

**Stability Theory by Liapunov's Direct Method** Nicolas Rouche, P. Habets, M. Laloy, 2012-12-06 This monograph is a collective work. The names appearing on the front cover are those of the people who worked on every chapter. But the contributions of others were also very important: C. Risito for Chapters I, II and IV, K. Peiffer for III, IV, VI, IX R. J. Ballieu for I and IX, Dang Chau Phien for VI and IX, J. L. Corne for VII and VIII. The idea of writing this book originated in a seminar held at the University of Louvain during the academic year 1971-72. Two years later, a first draft was completed. However, it was unsatisfactory mainly because it was excessively abstract and lacked examples. It was then decided to write it again, taking advantage of some remarks of the students to whom it had been partly addressed. The actual text is this second version. The subject matter is stability theory in the general setting of ordinary differential equations using what is known as Liapunov's direct or second method. We concentrate our efforts on this method, not because we underrate those which appear more powerful in some circumstances, but because it is important enough, along with its modern developments, to justify the writing of an up-to-date monograph. Also excellent books exist concerning the other methods, as for example R. Bellman [1953] and W. A. Coppel [1965].

**Econometrics of Risk** Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, Komsan Suriya, 2014-12-15 This edited book contains several state-of-the-art papers devoted to econometrics of risk. Some papers provide theoretical analysis of the corresponding mathematical, statistical, computational, and economical models. Other papers describe applications of the novel risk-related econometric techniques to real-life economic situations. The book presents new methods developed just recently, in particular, methods using non-Gaussian heavy-tailed distributions, methods using non-Gaussian copulas to properly take into account dependence between different quantities, methods taking into account imprecise (fuzzy) expert knowledge, and many other innovative techniques. This versatile volume helps practitioners to learn how to apply new techniques of econometrics of risk, and researchers to further improve the existing models and to come up with new ideas on how to best take into account economic risks.

**Geometry of Lie Groups** B. Rosenfeld, Bill Wiebe, 2013-03-09 This book is the result of many years of research in Non-Euclidean Geometries and Geometry of Lie groups, as well as teaching at Moscow State University (1947- 1949), Azerbaijan State University (Baku) (1950-1955), Kolomna Pedagogical College (1955-1970), Moscow Pedagogical University (1971-1990), and Pennsylvania State University (1990-1995). My first books on Non-Euclidean Geometries and Geometry of Lie groups were written in Russian and published in Moscow: Non-Euclidean Geometries (1955) [Ro1] , Multidimensional Spaces (1966) [Ro2] , and Non-Euclidean Spaces (1969) [Ro3]. In [Ro1] I considered non-Euclidean geometries in the broad sense, as geometry of simple Lie groups, since classical non-Euclidean geometries, hyperbolic and elliptic, are geometries of simple Lie groups of classes  $B_n$  and  $D$  , and geometries of complex  $n$  and quaternionic Hermitian elliptic and hyperbolic spaces are geometries of simple Lie groups of classes  $A_n$  and  $e_n$ . [Ro1] contains an exposition of the geometry of classical real non-Euclidean spaces and their interpretations as hyperspheres with identified antipodal points in Euclidean or pseudo-Euclidean spaces, and in projective and conformal spaces. Numerous interpretations of various spaces different from our usual space allow us, like stereoscopic vision, to see many traits of these spaces absent in the usual space.

Methods-Time Measurement Research Studies ,1951

Hölder Continuous Euler Flows in Three Dimensions with Compact Support in Time Philip Isett, 2017-02-21 Motivated by the theory of turbulence in fluids, the physicist and chemist Lars Onsager conjectured in 1949 that weak solutions to the incompressible Euler equations might fail to conserve energy if their spatial regularity was below  $1/3$ -Hölder. In this book, Philip Isett uses the method of convex integration to achieve the best-known results regarding nonuniqueness of solutions and Onsager's conjecture. Focusing on the intuition behind the method, the ideas introduced now play a pivotal role in the ongoing study of weak solutions to fluid dynamics equations. The construction itself—an intricate algorithm with hidden symmetries—mixes together transport equations, algebra, the method of nonstationary phase, underdetermined partial differential equations (PDEs), and specially designed high-frequency waves built using nonlinear phase functions. The powerful Main Lemma—used here to construct nonzero solutions with compact support in time and to prove nonuniqueness of solutions to the initial value problem—has been

extended to a broad range of applications that are surveyed in the appendix. Appropriate for students and researchers studying nonlinear PDEs, this book aims to be as robust as possible and pinpoints the main difficulties that presently stand in the way of a full solution to Onsager's conjecture.
